Foreword

Each year when we put together this report we look for three things: how robust is the data source; how granular is it and what does the data tell us in terms of the trend. Are things getting better or worse? Data is about measurement and the better we measure, the better we will get at management – this is what we know and this is why we put together this dataset each year. It helps us to make sense of the changes we see in our world; it helps us to understand what needs to be done.

The State of Environment Report 2022: In Figures tells us some revealing facts. Please do read this carefully, as we need to make sure that the sums of these numbers must start adding up to change.

SUNITA NARAIN

Editor, Down To Earth

Contents

Data doesn't die, it regenerates 08

High points 09

Key messages and insights

STATE OF DEVELOPMENT 11

Global risks 12

Climate action failure, extreme weather events, biodiversity loss are the long-term global risks

State of the states 14

Of the 115 indicators that are being monitored, states and UTs have regressed in 46 in 2019-22

Multidimensional poverty 90

One out of every four Indian is multidimensionally poor

COVID-19 & SDGs 111

Poverty and undernourishment will continue to plague countries including India, even in 2050

INDIA@75 115

Hits and misses 116

India is off target in 15 of the 17 government initiatives that have a deadline this year

STOCKHOLM@50 123

Environmental governance 124

The 1972 conference started a global debate around environment, but failed to save planet

STATE OF RIVERS 133

Heavy metals contamination 134

Over two-thirds of river monitoring stations in India have alarming levels of heavy metals

River pollution hotspots 137

40% of water quality monitoring stations have unhealthy levels of total coliform

139 STATE OF OCEANS

140 Coastal erosion

More than a third of India's coastline witnessed erosion between 1990 and 2018

146 Ocean health

India's score in the Ocean Health Index has progressively declined since 2012

151 STATE OF BIODIVERSITY

152 Forests cover

Forest cover in 38% districts have shrunk between 2019 and 2021

154 Missing forests

A third of India's recorded forests has not been assessed in the latest forest survey

156 Climate hotspots

By 2030, 45 to 64% of India's forest cover is likely to become a climate hotspot

160 Wildlife crimes

India lost at least 826 wild animals to poaching between 2019 and March 2021

163 STATE OF LAND

164 Land degradation

Nine states account for 80% of the degraded land in India

166 Soil health

Over 96% of soil samples are deficient in nitrogen; 61% are deficient in phosphorus

177 STATE OF AGRICULTURE

178 Farm households

The share of agricultural households has decreased between 2012-13 and 2018-19

180 Debt

More than half of the agricultural households in India are under debt

Farmer suicides 182

20 states/UTs recorded farmer suicides in 2020. In 2019, it was 17

STATE OF MIGRATION 185

Internal displacement 186

Climate disasters responsible for 76% of new internal migration in 2020

Human trafficking 190

Climate impacts are making people more vulnerable to trafficking in India

STATE OF HEALTH 193

National Health Index 194

Three southern states have the best health preparedness in the country

National Family & Health Survey 196

Proportion of overweight children has increased in all states except Tamil Nadu

Cancer 205

Leukaemia accounts for nearly half of all childhood cancers in India

STATE OF FOOD 209

Burden of poor diet 210

Over 1.7 million Indians die due to diseases attributable to poor diet every year

Food inflation 213

India's rate of consumer food price index jumped by 327% in April 2021 and 2022

STATE OF EMPLOYMENT 217

Unemployment 218

At 34.5%, Haryana had the highest rate of unemployment in April 2022

MGNREGA 220

Payment delays were deferred for three months in 25% of the cases

STATE OF CLIMATE 233

Rising mercury 234

India recorded its fifth warmest year in 2021 due to an unusually warm winter

235 Heatwaves

India reported 280 heatwave days in 2022, the highest in 12 years

236 Extreme weather events

At least 1,750 people died due to extreme weather events in 2021

238 Government expenditure

24 states/UTs have reduced their spending on natural calamities between 2021-22 and 2020-21

242 Melting glaciers

There are 25 disaster-prone glaciers that need to be monitored closely

245 STATE OF ENERGY

246 Coal burning

One-third of all carbon emissions come from burning coal in the world

249 STATE OF CITIES

250 Capital problem

Chennai is the only capital city to feature in the top 5 of the urban index

267 STATE OF WASTE

268 Hazardous waste

India's hazardous waste generation has increased by 5% in 2019-20 and 2020-21

270 E-waste

India's e-waste increased by 32% between 2018-19 and 2019-20

271 Plastic waste

India recycled 12% and burnt 20% of the plastic waste it generated in 2019-20

275 STATE OF AIR

276 Pollution and life expectancy

Indians will live for an additional 5.9 years if the country meets the WHO levels of PM2.5

Data doesn't die, it regenerates

RICHARD MAHAPATRA

Managing Editor, Down To Earth

Unlike the last two years, when the pandemic was the only headline, the first five months of 2022 have seen several new headlines. In April, food inflation became the "news" across the world, making the Russian invasion of Ukraine just the context. Next month, the pandemic was back in the news, though in a retrospective format. Soon after, in India in mid-May, the formal release of the National Family and Health Survey (NFHS) unexpectedly captured top headlines, dislodging the pandemic and food inflation. By the end of May, weather became the news, pushing everything else to the inside pages.

All of these developments share a powerful number that propels them into the spotlight. The data that pushed the pandemic to the back burner: "40% increase in wheat price, millions go hungry." The data that brought the pandemic back into headlines: "5 million people died of COVID-19 in India... 10 times the official figures." The data that buried both the pandemic and inflation temporarily: "Total fertility rate dips, sharpest decline among Muslims—NFHS." The data that stayed in the headlines for two weeks in May: "Global warming made India's 2022 killer heatwave 30 times more likely."

Every number is a story, and an insight. The data on food inflation made us realise that the victims of the Russia-Ukraine war are also the hungry millions living far away in Africa and Asia. The number of deaths in the pandemic sounded cold till the World Health Organization released its global estimate, and it made a statement on how we record deaths. The population rise in India was a perception that had a definitive influence on public discourse revolving around identity politics, till the numbers showed a contrary situation.

Data re-generates debate and discussions. *The State of India's Environment 2022: In Figures* reiterates this, every year. It brings to you the state of India's environment, quantified. This year marks a milestone, both for India and the planet. India is celebrating its 75th year of Independence and we have a promise of a "New India" with quantified development goals to keep. This year also marks the 50th anniversary of the Stockholm conference, the UN's first meeting on human environment. In this edition of this annual, we have two special datasets: one on India@75, which makes an assessment of whether the promised "New India" would be delivered; the other on how the planet's environment has been in the last 50 years. Besides, we have a special assessment of states on their development performance, district-level poverty analysis, and the state of migration due to disasters.

Every piece of information presented here tells a story, rekindles a stale debate, and ultimately informs you about the state of our environment. We process visuals 60,000 times faster than text. So, every number and word here has been visualised with the hope that we process the state of affairs on the planet faster and with greater effects.

High points

State of Development

Climate action failure is already the most severe global risk. But India's performance on climate action, captured in Sustainable Development Goal (SDG) 13, has slipped between 2019 and 2020. The performance of 28 states/UTs remains poor in SDG 13

India@75

India is off target in 15 of the 17 government initiatives that have a deadline this year. These include targets on the economy, employment, research and development, affordable housing, piped water connection, and doubling of farmers' income

Stockholm@50

The Stockholm conference in 1972 started a global debate on the environment. In the 50 years since, the world has seen a 38-fold increase in environmental laws. The condition of the planet, though, continues to worsen. Annual CO₂ emissions have reached 36.7 billion tonnes, which is more than double of what was emitted in 1972. This will have an impact on the planet's health and biodiversity in the next 50 years, unless corrective measures are fast-tracked

State of rivers

74% of river monitoring stations in India have alarming levels of heavy toxic metals. 40% of the stations have high levels of total coliform, and 15% have biochemical oxygen demand beyond permissible limits, which indicate poor wastewater treatment from industry, agriculture and domestic households

State of oceans

More than a third of India's coastline, which is spread across 6,907 km witnessed erosion between 1990 and 2018 due to sea level rise and anthropogenic activities

State of biodiversity

Forest cover in 244 out of 638 assessed districts across 27 states and five UTs has shrunk between 2019 and 2021. By 2050, the entire forest cover might become a climate hotspot

State of land

India has almost 30% of its geographical area under degradation, triggered by climate change and other factors. Soil health remains deficient in key macro- and micro-nutrients that are essential for sustainable agriculture

State of agriculture

While the cost of cultivation has increased by almost 35% between 2012-13 and 2018-19, the share of income from cultivation in an agricultural household has diminished from 48% in 2012-13 to 37% in 2018-19. At the same time, half of all agricultural households are under debt. As per government data, on an average, at least 29 farmers and farm labourers commit suicide in the country daily

State of migration

Climate change is causing more internal displacements than conflicts around the world, and India is the fourth worst hit, trailing only China, the Philippines, and Bangladesh

State of health

Only five large states (Telangana, Maharashtra, Kerala, Tamil Nadu and Andhra Pradesh) and two small states (Mizoram and Telangana) show good overall performance in the Health Index that looks at key health indicators and existing infrastructure

State of food

More than 1.7 million Indians die due to diseases attributable to an unhealthy diet. The diet of an Indian, on an average, lacks in fruits, vegetables, legumes, nuts and whole grains

State of employment

In April 2022, five states had an unemployment rate of more than 15%. The unemployment rate in Haryana, Rajasthan and Bihar remained alarmingly high at 34.5%, 28.8% and 21.1%, respectively. Meanwhile, close to 60% of rural households demanded jobs under the Mahatma Gandhi National Rural Employment Guarantee Act in 2021-22. While payment delays remained the lowest in the previous five years, 25% of the delays were longer than three months

State of climate

In 2022, India recorded its hottest March. This triggered an early onslaught of heatwaves. The country reported 280 heatwave days between March 11 and May 18, the highest in the past 12 years.

State of energy

One-third of all carbon emissions come from burning coal, making it the single largest contributor to climate change in the world

State of cities

Down to Earth's analysis of 14 key indicators under Niti Aayog's Urban Index reveals that waste management, tree cover, health insurance, access to clean fuel, and air quality remain the key challenges for the 56 million-plus and capital cities in the country

State of plastics

India recycled 12% and burnt 20% of the 3.5 million tonnes of plastic waste it generated in 2019-20. There is no information on the remaining 68% of plastic waste, which most likely ends up in dumpsites and landfills

State of air

Reducing air pollution to meet the WHO's levels would add 2.2 years to global life expectancy. In India, life expectancy will go up by 5.9 years if the country meets the WHO levels of PM2.5

STATE OF DEVELOPMENT

GLOBAL RISKS

Climate action failure, extreme weather, and biodiversity loss are the top three long-term global risks

STATE OF THE STATES

Of the 115 SDG indicators that are being monitored in India, states and UTs have regressed in 46 of them between 2019 and 2020

MULTIDIMENSIONAL POVERTY

Every fourth Indian is multidimensionally poor.
In rural areas, every third person is multidimensionally poor

Global risks

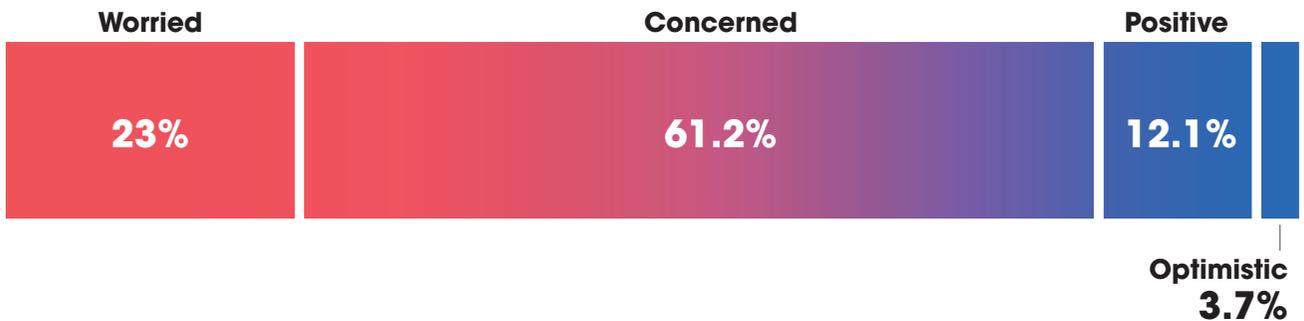

Environmental risks are perceived to be the five most critical long-term threats to the world as well as the most potentially damaging to people and the planet, with climate action failure, extreme weather, and biodiversity loss ranking as the top three most severe risks. Debt crises and geoeconomic confrontations are among the most severe risks over the next 10 years. Geopolitical and geoeconomic tensions will make it more difficult to tackle common global challenges, notably climate change

WHAT IS A GLOBAL RISK

It is the possibility of the occurrence of an event or condition that, if it occurs, could cause significant **negative impact for several countries or industries**

Grim future

When asked about the outlook of the world, eight out of every 10 respondents* said they were either concerned or worried. This shows a lack of optimism that can lead to a vicious cycle of disillusionment and social unrest

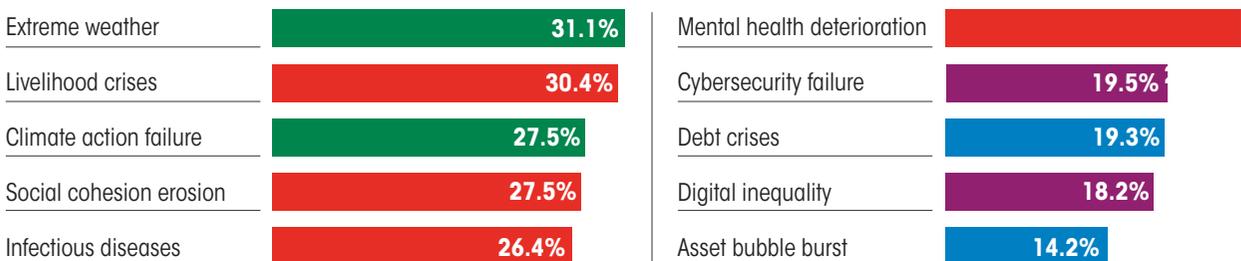

Climate worries

For the next five years, societal and environmental risks will be the biggest challenges globally. Over a 10-year horizon, concerns about the health of the planet will dominate

0-2 years

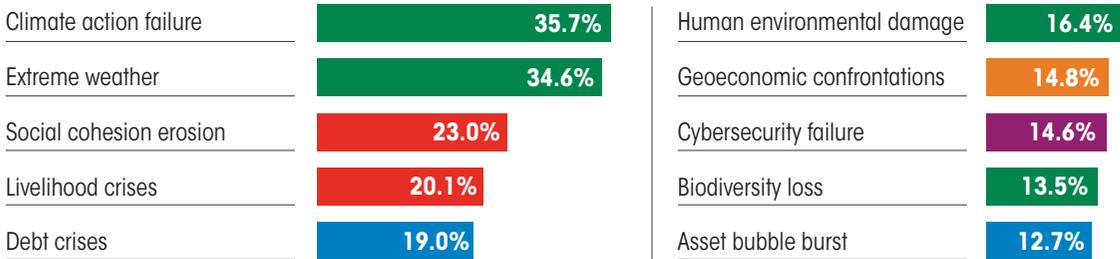

■ Economic ■ Environmental ■ Geopolitical ■ Societal ■ Technological

* Based on survey of over 12,000 global leaders in business, non-profits, governments, academicians and others, carried out between September 8 and October 12, 2021; **Source:** World Economic Forum Global Risks Perception Survey 2021-2022

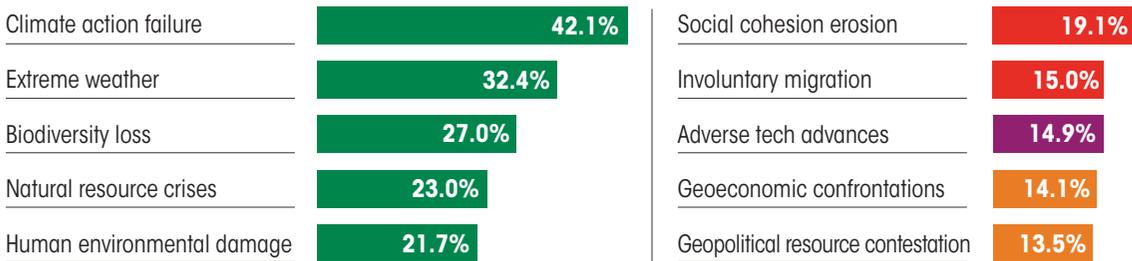

2-5 years

■ Economic ■ Environmental ■ Geopolitical ■ Societal ■ Technological

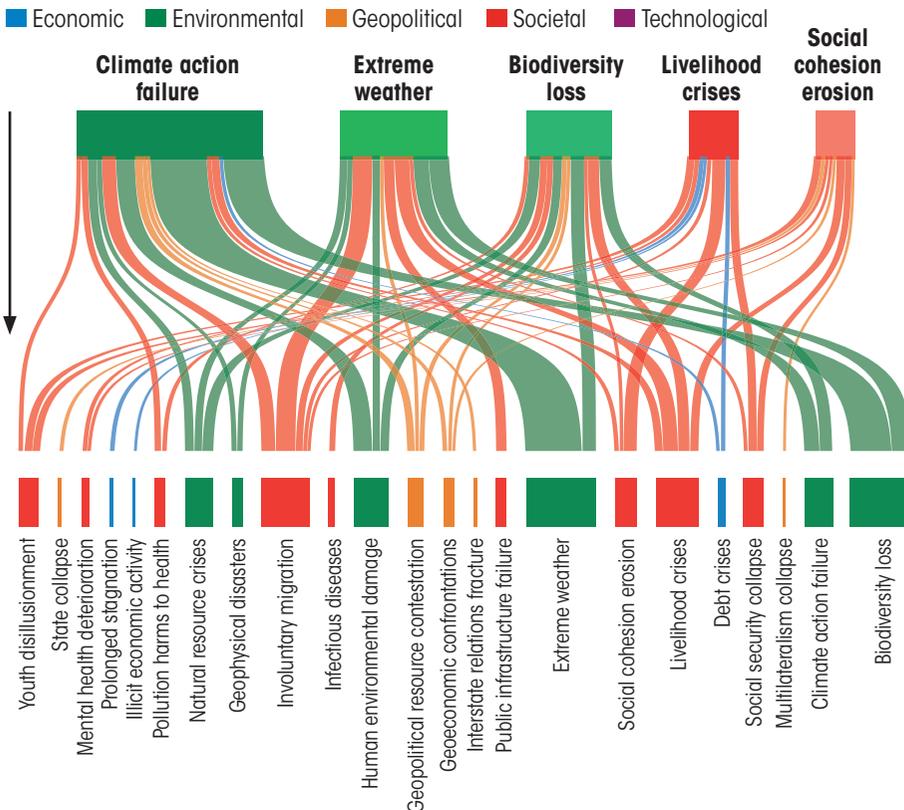

5-10 years

■ Economic ■ Environmental ■ Geopolitical ■ Societal ■ Technological

Trickling effect

Most potentially damaging risks (top row) and risks they will aggravate (bottom row)

INDIA

Economy and digital divide, instead of climate change, remain the primary concerns in India

Fracture of interstate relations

Economic, political and/or technological rivalries between geopolitical powers resulting in a fracture of bilateral relations

Debt crises in large economies

Corporate and/or public finances overwhelmed by debt accumulation in large economies, resulting in mass bankruptcies

Widespread youth disillusionment

Youth disengagement, lack of confidence at a global scale, negatively impacting social stability and economic productivity

Failure of technology governance

Lack of globally accepted frame-works, regulations for the use of critical digital networks and technology

Digital inequality

Fractured and/or unequal access to critical digital networks and technology as a result of unequal investment, lack of skills

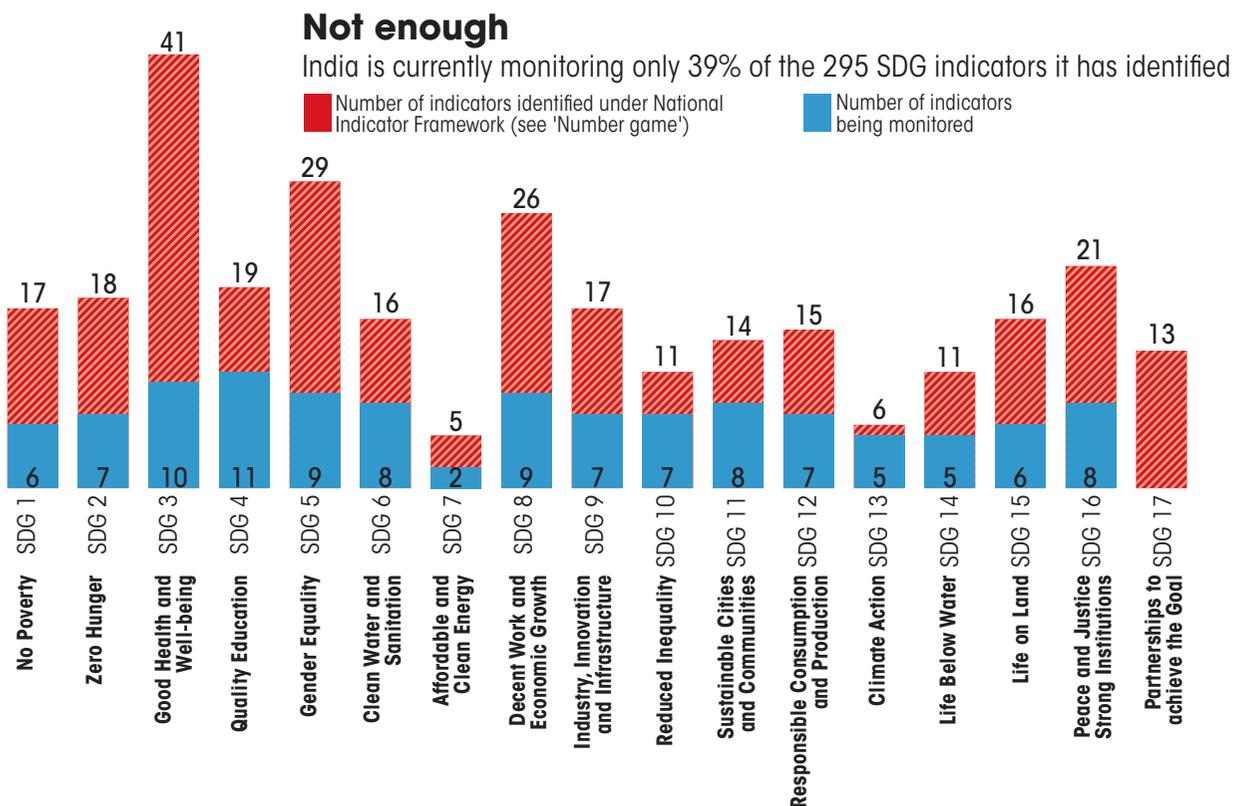

Based on survey of over 12,000 global leaders in business, non-profits, governments, academicians and others, carried out between September 8 and October 12, 2021; **Source:** World Economic Forum Global Risks Perception Survey 2021-2022

State of the states

With eight years left to meet the Sustainable Development Goals (SDGs) 2030, **India's preparedness remains far from satisfactory. India has identified 295 primary indicators, but it is monitoring only 115 of these.** In essence, the country is not even monitoring progress on 61 per cent of its indicators. For instance, there are **26 indicators identified under SDG 8**, which deals with sustained and inclusive economic growth and productive employment. **India monitors just nine of them.** It is silent on crucial indicators such as the growth of registered micro, small and medium-sized enterprises.

Of the **115 indicators** that are being **monitored**, states and Union Territories (UTs) **have regressed in 46 of them** between 2019 and 2020. For example, 22 states and UTs have seen an increase in the gap between wages/salaries of men and women. Twenty five states and UTs have seen an increase in cognisable crimes against children per 100,000 population. While the data for the subsequent years is not yet available, it can only be reasonably assumed that the pandemic must have made the situation worse.

Another hurdle is in the way the data is being collected for monitoring the SDGs. Since the goals are dynamic, data should be collected frequently and comprehensively to aid governments in planning. For certain indicators, the periodicity of data collection is 10 years. This explains why the performance of several indicators remains static. These indicators do not reflect the current situation

Number game How India identifies the indicators to assess the performance of SDGs

June 2018

The Ministry of Statistics and Programme Implementation developed a National Indicator Framework (NIF) consisting of 306 national indicators along with data sources and periodicity of collection

June 2020

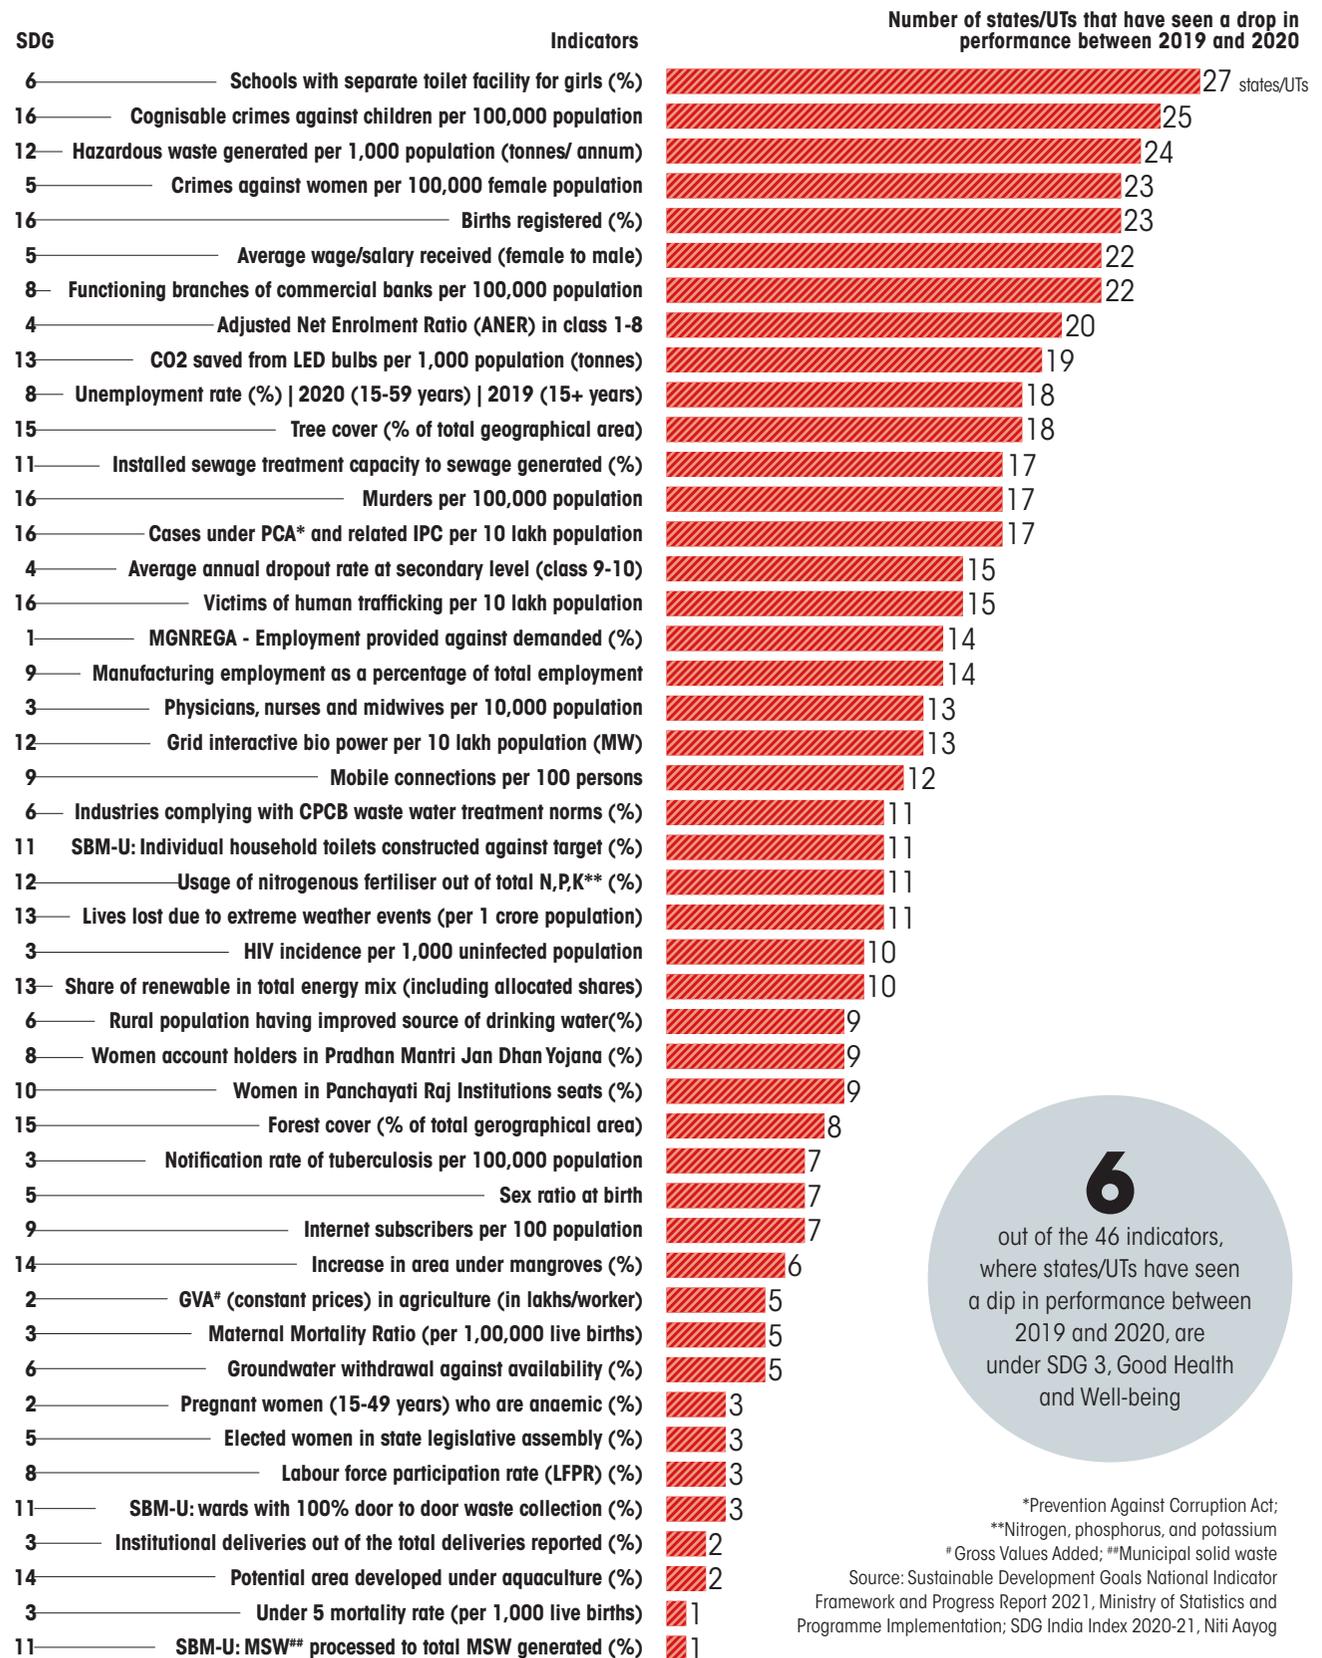

NIF 2.1 released with 302 indicators. NIF is the backbone for facilitating monitoring of SDGs at the national level and provides appropriate direction to the policymakers and implementing agencies

June 2021

NIF 3.1 released with 295 indicators. Presently, at national level, data flow from National Statistical Office and nearly 30 ministries/departments

Poor signs

There are 46 indicators across 15 SDGs where states and UTs have recorded a dip in performance

6 out of the 46 indicators, where states/UTs have seen a dip in performance between 2019 and 2020, are under SDG 3, Good Health and Well-being

*Prevention Against Corruption Act; **Nitrogen, phosphorus, and potassium * Gross Values Added; ***Municipal solid waste

Arunachal Pradesh

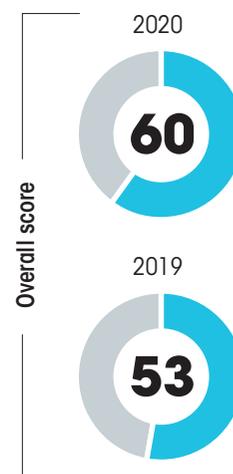

With the distinction of being one of the few states that has aligned its budgetary allocations with the SDGs, Arunachal Pradesh has prepared a draft of the Vision 2030 document with targets for 2019, 2022, and 2030. It has also created an SDG policy cell in the departments of finance, planning, and investment to steer the implementation of the SDGs.

Still, the state remains off-track in nine out of the 15 SDGs. Its performance has deteriorated on 21 indicators spread across 10 SDGs, over 2019. These include gross value added in the farm sector, availability of doctors/nurses per 10,000 population, among others

SDG RATING

■ Not on track (score 0-64) ■ On track (65 or more)

Indicators where performance have improved (↑), deteriorated (↓), or not changed (↔) from 2019

NOT ON TRACK

Assam

It was the first state to adopt the SDGs and to initiate budgeting focused on outcomes, as outlined in Assam Agenda 2030. Assam has also set up a transformation and development department for overall monitoring and coordination of government schemes and to achieve the SDGs.

Still, the state remains off-track on 11 of the 15 SDGs. Its performance has deteriorated on 16 indicators spread across 10 SDGs, over 2019. These include the enrolment rate in elementary education, the dropout rate in secondary education, the salary disparity between men and women, and crimes against children, among others

Bihar

India's third most populous state ranks the lowest in the country. Bihar remains off-track in 10 of the 15 SDGs. The state's performance, already among the lowest in the country, has deteriorated on 19 indicators spread across 11 SDGs, over 2019. These include physicians, nurses, and midwives per 10,000 population, sex ratio, enrolment rate in elementary education, access to safe drinking water in rural areas, and mobile phone density, among others

Chhattisgarh

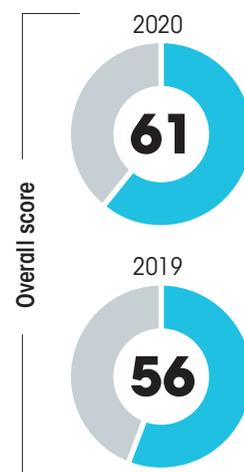

The state planning commission has formed 11 working groups and identified nodal departments for each SDG to augment progress. The nodal departments have to set up annual and half-yearly milestones.

Still, the state remains off-track in nine out of the 15 SDGs. Its performance has deteriorated on 16 indicators spread across 11 SDGs over 2019. These include the maternal mortality rate, the enrolment rate in elementary education, the per capita hazardous waste generation, and human trafficking per 1,000,000 population, among others

STATE OF DEVELOPMENT

Goa

In March, Governor P S Sreedharan Pillai told the state legislative assembly that the state aims to become the first in all SDGs by 2029.

In order to achieve this target, the state will need to focus on five out of 15 SDGs where it remains off-track. Its performance has deteriorated on 12 indicators spread across eight SDGs over 2019. These include notification rate of tuberculosis, enrolment rate in elementary education, crimes against women, human trafficking, among others

Gujarat

The state has developed "Gujarat Sustainable Vision 2030", which allocates responsibility to various key organs of the government to develop roadmaps for meeting SDGs. Some of the departments, including health department, have also developed their roadmaps.

In order to achieve this target, the state will need to focus on seven out of 15 SDGs where it remains off-track. Its performance has deteriorated on 17 indicators spread across 11 SDGs over 2019. These include notification rate of tuberculosis, crimes against women, human trafficking, among others

Haryana

In 2017, the state published its "VISION 2030" which was in alignment with SDGs and the state has progressively increased its budget for meeting SDGs. In 2022-23, the state aligned ₹114,444.77 crore with relevant SDGs. The state has also undertaken schematic mapping of welfare and development schemes, and recurring nature schemes with SDGs.

Still, the state remains off-track in seven of the 15 SDGs. Its performance has deteriorated on 17 indicators spread across eight SDGs, over 2019. These include school dropout rate, crimes against women, unemployment rate, per capita hazardous waste generation, among others

SDG RATING

Himachal Pradesh

The state has published the “Drishti Himachal Pradesh-2030 Sustainable Development Goals” to implement and monitor the progress of SDGs and has taken several steps for integration of SDGs into the budgetary and planning process. Himachal Pradesh has also shortlisted 138 key indicators and targets for monitoring progress on SDGs, out of which 12 have been achieved, 38 are to be achieved by 2022 and 87 are planned to be achieved by 2030. Still, the state remains off-track in four of the 15 SDGs. Its performance has deteriorated on 17 indicators spread across 12 SDGs, over 2019

Jharkhand

The state has developed its vision document and has identified a nodal officer for each of the SDG. The state is yet to take concrete steps towards SDG budgeting. In order to realise the SDGs by 2030, the state needs to focus on eight of the 15 SDGs where it remains off-track. Its performance has deteriorated on 12 indicators spread across 10 SDGs, over 2019. Its progress has slowed in areas such as elementary school enrollment, renewable energy share of the total energy mix, crimes against women and children, and birth registry, among others

Karnataka

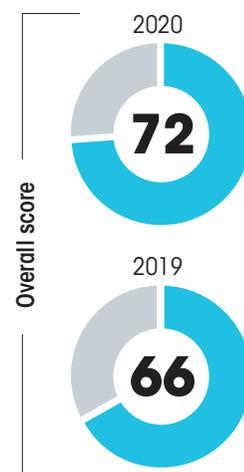

The state has come out with an SDG vision document for 2025. It has also launched Avalokana, an online platform which maps SDGs and indicators to line departments, and shows specified financial and physical targets for each scheme, as per the state budget.

Still, the state remains off-track in six of the 15 SDGs. Its performance has deteriorated on 17 indicators spread across 11 SDGs, over 2019. These include sex ratio, availability of physicians/nurses per 10,000 population, school dropout rate, deaths due to extreme weather events, crimes against women and children, registration of births, among others

Kerala

Besides an SDG vision document for 2030, the state has carried out SDG target-wise mapping of departments, agencies and development programme/schemes.

Still, the state remains off-track in four of the 15 SDGs. Its performance has deteriorated on 17 indicators spread across 12 SDGs, over 2019. These include deaths due to extreme weather events, maternal mortality rate, enrolment in elementary education, crimes against women and children, murders, among others

Pupil teacher ratio at secondary level (class 9-10)	16		30
SDG 3: Good Health and Well-being	72		
Maternal Mortality Ratio (per 100,000 live births)	43	↓	70
Under 5 mortality rate (per 1,000 live births)	10	↓	25
Children (9-11 months) fully immunised (%)	92		100
Notification rate of tuberculosis per 100,000 population	75	↑	242
HIV incidence per 1,000 uninfected population	0.02	↑	0
Suicide rate (per 100,000 population)	24.30		3.5
Road accident deaths per 100,000 population	12.42		5.81
Institutional deliveries out of the total deliveries reported (%)	99.90	↑	100
Monthly per capita out-of-pocket expenditure on health (%)	17		7.83
Physicians, nurses and midwives per 10,000 population	115	↑	45
SDG 6: Clean Water and Sanitation	89		
Rural population getting drinking water within premises through piped water supply (%)	35.29		100
Rural population having improved source of drinking water (%)	99.35	↑	100
SBM-Gramin: Individual household toilets constructed against target (%)	100	↔	100
SBM-G: Districts verified open defecation free (%)	100	↔	100
Schools with separate toilet facility for girls (%)	99.28	↓	100
Industries complying with CPCB waste water treatment norms (%)	99.22	↑	100
Groundwater withdrawal against availability (%)	51.25	↔	70
Blocks/mandals/taluka over-exploited (%)	0.66	↔	0
SDG 7: Affordable and Clean Energy	100		
Households electrified (%)	100	↔	100
Liquefied petroleum gas and piped natural gas connections against number of households (%)	110.78		100
SDG 10: Reduced Inequalities	69		
Population in the lowest two wealth quintiles (%)	3.20		4.67
Elected women in Lok Sabha from state/UT (%)	5		50
Women in Panchayati Raj Institutions seats (%)	52.42	↑	33
SC/ST seats in State Legislative Assembly (%)	5.71	↔	50
LFPR: transgender to male	0.99	↔	1
Crimes against SCs (per 1,00,000 SC population)	28.2		0
Crimes against STs (per 1,00,000 ST population)	28.9		0
SDG 11: Sustainable Cities and Communities	75		
Urban households living in katcha houses (%)	0.20		0
Deaths due to road accidents in urban areas per 1,00,000 population	6.40		7.05

	2020 score	Change from 2019	India Target 2030
Swachh Bharat Mission-Urban (SBM-U): % of wards with 100% door to door waste collection	85.46	↔	100
SBM-U: Individual household toilets constructed against target (%)	126	↑	100
SBM-U: Municipal solid waste (MSW) processed to total MSW generated (%)	74.96	↑	100
SBM-U: Wards with 100% source segregation (%)	100	↑	100
Installed sewage treatment capacity to sewage generated (%)	4.29	↓	100
Urban households with drainage facility (%)	75.10		100
SDG 12: Responsible Consumption and Production	65		
Per capita fossil fuel consumption (in kg)	189.90		64.1
Usage of nitrogenous fertiliser out of total nitrogen, phosphorus, and potassium (%)	40.22	↑	57
Hazardous waste generated per 1,000 population (tonnes/ annum)	3.05	↓	4.04
Hazardous waste recycled/utilised to waste generated 2019 - Schedule IV hazardous waste	32.64		21.81
Plastic waste generated per 1,000 population (tonnes/annum)	3.809		1.27
Biomedical waste treated to generated (%)	58.67		100
Grid interactive bio power per 10 lakh population (MW)	0.06	↑	21.81
SDG 13: Climate Action	69		
Lives lost due to extreme weather events (per 100 million population)	136.27	↓	0
Disaster preparedness score as per Disaster Resilience Index	24.50		50
Share of renewable in total energy mix (including allocated shares)	40.16	↓	40
CO2 saved from LED bulbs per 1,000 population (tonnes)	45.64	↑	103.22
Disability-adjusted life year rate attributable to air pollution (per 100,000 population)	1698		1442
SDG 15: Life on Land	77		
Forest cover (%)	54.42	↑	-
Tree cover (%)	7.56	↓	-
Area covered under afforestation schemes (%)	0.05		2.74
Degraded land over total land area (%)	7.66		5.46
Increase in area of desertification (%)	2.45	↔	0
Number of cases under Wildlife Protection Act (1972) per million hectares of protected area	12		0
SDG 16: Peace, Justice, and Strong Institutions	80		
Murders per 100,000 population	0.90	↓	1
Cognisable crimes against children per 100,000 population	50.90	↓	0
Victims of human trafficking per 10 lakh population	6.19	↓	0
Missing children per 100,000 child population	23.37		0
Courts per 100,000 population	2.61	↑	0.19
Cases under Prevention of Corruption Act and related IPC per 10 lakh population	97.20	↑	100
Births registered (%)	108	↑	100
Population covered under Aadhaar (%)

Madhya Pradesh

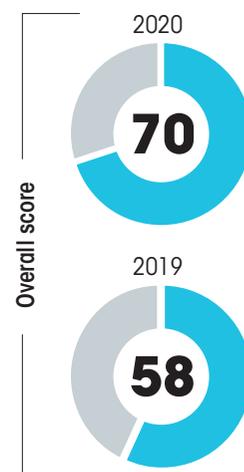

Besides a vision document, released in 2018, the state has made its policy and planning commission the nodal agency for implementing SDGs. Madhya Pradesh has also constituted an interdepartmental SDG cell at the state level and dedicated SDGs cells at the district level.

Still, the state remains off-track in eight of the 15 SDGs. Its performance has deteriorated on 14 indicators spread across 10 SDGs, over 2019. These include enrolment rate in elementary education, dropout rate in secondary education, industries complying with wastewater treatment, hazardous waste generation, among others

SDG RATING

Maharashtra

The state has made the planning department the nodal agency and has set up SDG-Implementation & Coordination Centre, under the Directorate of Economics & Statistics of Planning Department. The state has also mapped 1,335 state-level and 540 district-level schemes & programmes with SDGs targets. Still, the state remains off-track in seven of the 15 SDGs. Its performance has deteriorated on 17 indicators spread across 12 SDGs, over 2019. These include school dropout rate, crimes against women, unemployment rate, per capita hazardous waste generation among others

Manipur

The state has constituted committees at the state and district levels. They also set up interdepartmental committees headed by principal secretary (planning). Still, the state remains off-track in eight of the 15 SDGs. Its performance has deteriorated on 11 indicators spread across six SDGs, over 2019. These include tuberculosis notification rate, availability of physicians/nurses per 10,000 population tree cover, human trafficking rate, among others

SDG RATING

Logistics Ease Across Different States report score	2.42		5
Mobile connections per 100 persons	72.97	↑	100
Internet subscribers per 100 population	52.34	↑	100
SDG 13: Climate Action	57		
Lives lost due to extreme weather events (per 100 million population)	81.17		0
Disaster preparedness score as per Disaster Resilience Index	11		50
Share of renewable in total energy mix (including allocated shares)	40.93	↑	40
CO2 saved from LED bulbs per 1,000 population (tonnes)	9.95	↓	103.22
Disability-adjusted life year rate attributable to air pollution (per 100,000 population)	1822		1442
SDG 15: Life on Land	60		
Forest cover (%)	75.46	↓	-
Tree cover (%)	0.77	↓	-
Area covered under afforestation schemes (%)	0.29		2.74
Degraded land over total land area (%)	38.29		5.46
Increase in area of desertification (%)	1.49	↔	0
Number of cases under Wildlife Protection Act (1972) per million hectares of protected area	44		0
Elected women in the State/UT (%) (Lok Sabha elections)	13.79		50
Seats held by women in PRIs (%)	50	↔	33
SC/ST seats in State Legislative Assembly (%)	35.65	↔	-
LFPR - Transgender to male	0.56	↔	1
Crimes against SCs (per 1,00,000 SC population)	46.7		0
Crimes against STs (per 1,00,000 ST population)	12.5		0

ON TRACK: Good Health and Well-being	68		
Maternal Mortality Ratio (per 100,000 live births)	Null	↔	70
Under 5 mortality rate (per 1,000 live births)	Null		25
Children (9-11 months) fully immunised (%)	82		100
Notification rate of tuberculosis per 100,000 population		↓	242
HIV incidence per 1,000 uninfected population	0.34	↑	0
Suicide rate (per 100,000 population)	1.90		3.5
Road accident deaths per 100,000 population	5.01		5.81
Institutional deliveries out of the total deliveries reported (%)	84.60	↑	100
Monthly per capita out-of-pocket expenditure on health (%)	14.40		7.83
Physicians, nurses and midwives per 10,000 population	38	↓	45
SDG 6: Clean Water and Sanitation	87	↔	
Rural population getting drinking water within premises through piped water supply (%)	69.55		100
Rural population having improved source of drinking water (%)	100	↑	100
SBM-Gramin: Individual household toilets constructed against target (%)	100	↔	100
SBM-G: Districts verified open defecation free (%)	100	↔	100
Schools with separate toilet facility for girls (%)	77.84	↓	100
Industries complying with Central Pollution Control Board waste water treatment norms (%)	100	↔	100

	2020 score	Change from 2019	India Target 2030
Groundwater withdrawal against availability (%)	2.56	↓	70
Blocks/mandals/taluka over-exploited (%)	0	↔	0
SDG 7: Affordable and Clean Energy	96		
Households electrified (%)	100	↔	100
Liquefied petroleum gas and piped natural gas connections against number of households (%)	95.64		100
SDG 10: Reduced Inequalities	70		
Population in the lowest two wealth quintiles (%)	41.10		4.67
Elected women in Lok Sabha from state/UT (%)	0	↔	50
Women in Panchayati Raj Institutions seats (%)	50.69	⊕	33
SC/ST seats in State Legislative Assembly (%)	33.33	↔	-
LFPR: transgender to male	Null	↔	1
Crimes against SCs (per 100,000 SC population)	0	↔	0
Crimes against STs (per 100,000 ST population)	0.2		0
SDG 11: Sustainable Cities and Communities	65		
Urban households living in katcha houses (%)	0.70		0
Deaths due to road accidents in urban areas per 1,00,000 population	3.98		7.05
Swachh Bharat Mission-Urban (SBM-U): % of wards with 100% door to door waste collection	100	↑	100
SBM-U: Individual household toilets constructed against target (%)	86	↑	100
SBM-U: Municipal solid waste (MSW) processed to total MSW generated (%)	69.73	↑	100
SBM-U: Wards with 100% source segregation (%)	67.65	↑	100
Installed sewage treatment capacity to sewage generated (%)	18	↑	100
Urban households with drainage facility (%)	33.30		100
SDG 12: Responsible Consumption and Production	89		
Per capita fossil fuel consumption (in kg)	88.50		64.1
Usage of nitrogenous fertiliser out of total nitrogen, phosphorus, and potassium (%)	52.85	↑	57
Hazardous waste generated per 1,000 population (tonnes/ annum)	Null	↔	4.04
Hazardous waste recycled/utilised to waste generated 2019 - Schedule IV hazardous waste	Null	↔	21.81
Plastic waste generated per 1,000 population (tonnes/annum)	4.043		1.27
Biomedical waste treated to generated (%)	79.37		100
Grid interactive bio power per 10 lakh population (MW)	Null	↔	21.81
SDG 16: Peace, Justice, and Strong Institutions	69		
Murders per 100,000 population	1.80	↑	1
Cognisable crimes against children per 100,000 population	15.40	↓	0
Victims of human trafficking per 10 lakh population	60.77	↓	0
Missing children per 100,000 child population	11.67		0
Courts per 100,000 population	1.93	↔	4.25
Cases under Prevention of Corruption Act and related IPC per 10 lakh population	1.93	↓	0.19
Births registered (%)	100		100
Population covered under Aadhaar (%)	85	↑	100

Mizoram

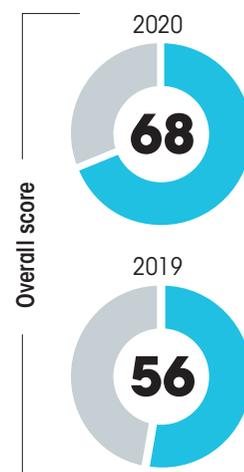

The state has an SDGs cell, a high-level monitoring committee, a technical committee, besides district planning committee to monitor ground-level progress. The state has line department budgets aligned to SDGs with allocations for specific schemes/ programmes.

Still, the state remains off-track in seven of the 15 SDGs. Its performance has deteriorated on 14 indicators spread across 10 SDGs, over 2019. These include prevalence of anaemia in pregnant women, forest and tree cover, enrolment in elementary education, share of sewage treatment capacity to total generated, among others

Nagaland

Home to India's longest insurgency, Nagaland is one of the worst-performing northeastern states. It remains off-track in nine of the 15 SDGs. Its performance has deteriorated on eight indicators spread across six SDGs, over 2019. These include HIV incidence, enrolment rate in elementary education, share of schools with separate toilets for girls, human trafficking, among others

SDG RATING

Not on track (score 0-64) On track (65 or more)

Indicators where performance have improved (↑), deteriorated (↓), or not changed (↔) from 2019

Odisha

For operationalisation of SDGs, the state has designated the planning and convergence department as the nodal agency. It has also set up an SDGs core team for planning, strategising and formulating action plans and monitoring implementation.

Still, the state remains off-track in seven of the 16 SDGs. Its performance has deteriorated on 21 indicators spread across 13 SDGs, over 2019. These include enrolment rate in elementary education, crimes against women, wastewater and hazardous waste generation, among others

SDG RATING

Punjab

Besides an SDGs document vision document for 2030, the state has initiated several special schemes for empowerment of women-led households and persons with disabilities.

Still, the state remains off-track in five of the 15 SDGs. Its performance has deteriorated on 20 indicators spread across 10 SDGs, over 2019. These include maternal mortality ratio, HIV incidence per 1,000 uninfected population, access to improved source of drinking water in rural areas, share of renewables in energy mix, among others

Rajasthan

The state has mapped all welfare schemes with key SDGs and introduced a module, Integrated Financial Management System, to map all budget heads with welfare schemes.

Still, the state remains off-track in 10 of the 15 SDGs. Its performance has deteriorated on 18 indicators spread across 11 SDGs, over 2019. These include enrolment rate in elementary education, availability of separate toilets for girls in schools, installed sewage treatment capacity to total generated, among others

Tamil Nadu

The state has set up a high power committee headed by the chief secretary to oversee SDGs implementation. Tamil Nadu has also constituted eight thematic working groups and SDGs units in every department and SDGs cells at every district. It has also rolled out child and gender budget for inclusive growth. Still, the state remains off-track in four of the 16 SDGs. Its performance has deteriorated on 19 indicators spread across 10 SDGs, over 2019. These include enrolment rate in elementary education, dropout rate in secondary education, hazardous waste generation, installed sewage treatment capacity to total generation, among others

Telangana

The state has established a Centre for SDGs and appointed the chief planning officer at the nodal role in districts. It has mapped budget allocations for various development schemes to SDGs.

Still, the state remains off-track in five of the 15 SDGs. Its performance has deteriorated on 13 indicators spread across 10 SDGs, over 2019. These include availability of physicians/nurses per 10,000 population, crimes against women, hazardous waste generation, installed sewage treatment capacity to total generation, among others

Uttar Pradesh

The state has set up a taskforce, headed by the chief secretary, and goal-wise working groups besides mapping SDGs indicators with schemes and government departments.

Still, the Uttar Pradesh remains off-track in 10 of the 15 SDGs. Its performance has deteriorated on 17 indicators spread across 11 SDGs, over 2019. These include employment generated under Mahatma Gandhi National Rural Employment Guarantee Act, dropout rate at secondary level, crimes against women, among others

Uttarakhand

The state has set up six working groups for guiding SDGs implementation and has established district-level cells that are headed by the chief development officers for decentralised monitoring.

Still, the state remains off-track in four of the 15 SDGs. Its performance has deteriorated on 18 indicators spread across 11 SDGs, over 2019. These include sex ratio, crimes against women, unemployment rate, maternal mortality rate, among others

West Bengal

The state has set up a monitoring cell to coordinate and implement the SDGs. It is also closely monitoring the progress in North Bengal, Paschimanchal and Sundarbans region, which account for 73 per cent of the state's population.

Still, the state remains off-track in 10 of the 15 SDGs. Its performance has deteriorated on 14 indicators spread across 11 SDGs, over 2019. These include maternal mortality rate, access to improved drinking water in rural households, death due to extreme weather events, among others

Andaman & Nicobar

The Union Territory has prepared "Vision 2030" plan, along with a seven-year strategy and three-year action agenda to implement SDGs. It has also mapped all welfare schemes and government departments with SDGs targets.

Still, the state remains off-track in five of the 15 SDGs. Its performance has deteriorated on 11 indicators spread across 17 SDGs, over 2019. These include low enrolment rate, crimes against women, usage of fertilisers, among others

Dadra & Nagar Haveli

The Union Territory has assigned the department of planning and statistics as the nodal agency. The state remains off-track in eight of the 15 SDGs. Its performance has deteriorated on 14 indicators spread across nine SDGs, over 2019. These include crimes against women and children, availability of separate toilets for girls in schools, use of nitrogenous fertilisers, share of renewables in total energy mix, among others

Delhi

The Capital has set up nine working groups constituted and a steering committee for review and monitoring of SDGs. The Union Territory has also aligned its budget with SDGs.

Still, the state remains off-track in six of the 15 SDGs. Its performance has deteriorated on 13 indicators spread across eight SDGs, over 2019. These include dropout rate at secondary education, crimes against women, sex ratio, and share of industries complying with waste water treatment norms, among others

SDG RATING

Lakshadweep

The Union Territory has constituted a high-level committee to monitor the progress on SDGs and has undertaken various welfare measures for the vulnerable communities.

Still, it remains off-track in seven of the 15 SDGs. Its performance has deteriorated on nine indicators spread across eight SDGs, over 2019. These include share of pregnant women who are anaemic, crimes against women, enrolment in elementary education, among others

SDG RATING

Multidimensional poverty

32.75 per cent, or almost one out of every three people in rural India, is multidimensionally poor. In contrast, 8.1 per cent urban population is multidimensionally poor

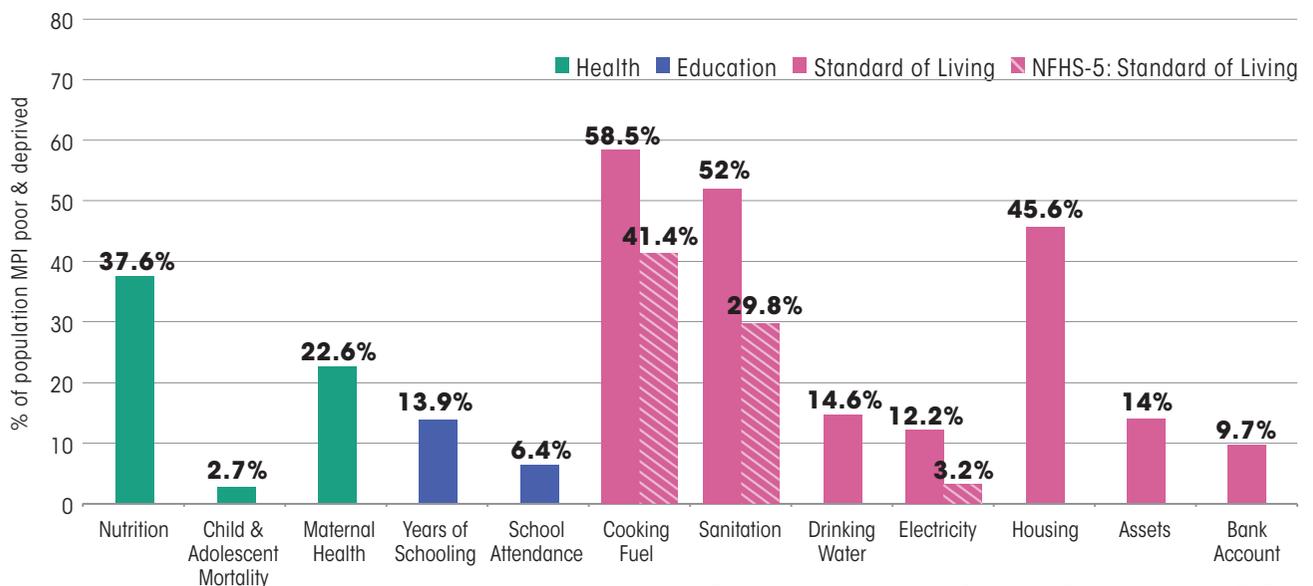

What is multidimensional poverty and how is it measured

India's multidimensional poverty index (MPI), the most widely used non-monetary poverty index in the world, looks at three dimensions and 12 indicators. The indicators are given different weights

Share of population deprived in each indicator

The country identifies people as poor or not poor based on a dual-cutoff counting method. The first order cut-off within each indicator is applied to determine which person is "deprived" in that indicator, irrespective of whether they are multidimensionally poor or not. This is called the **uncensored headcount ratio**

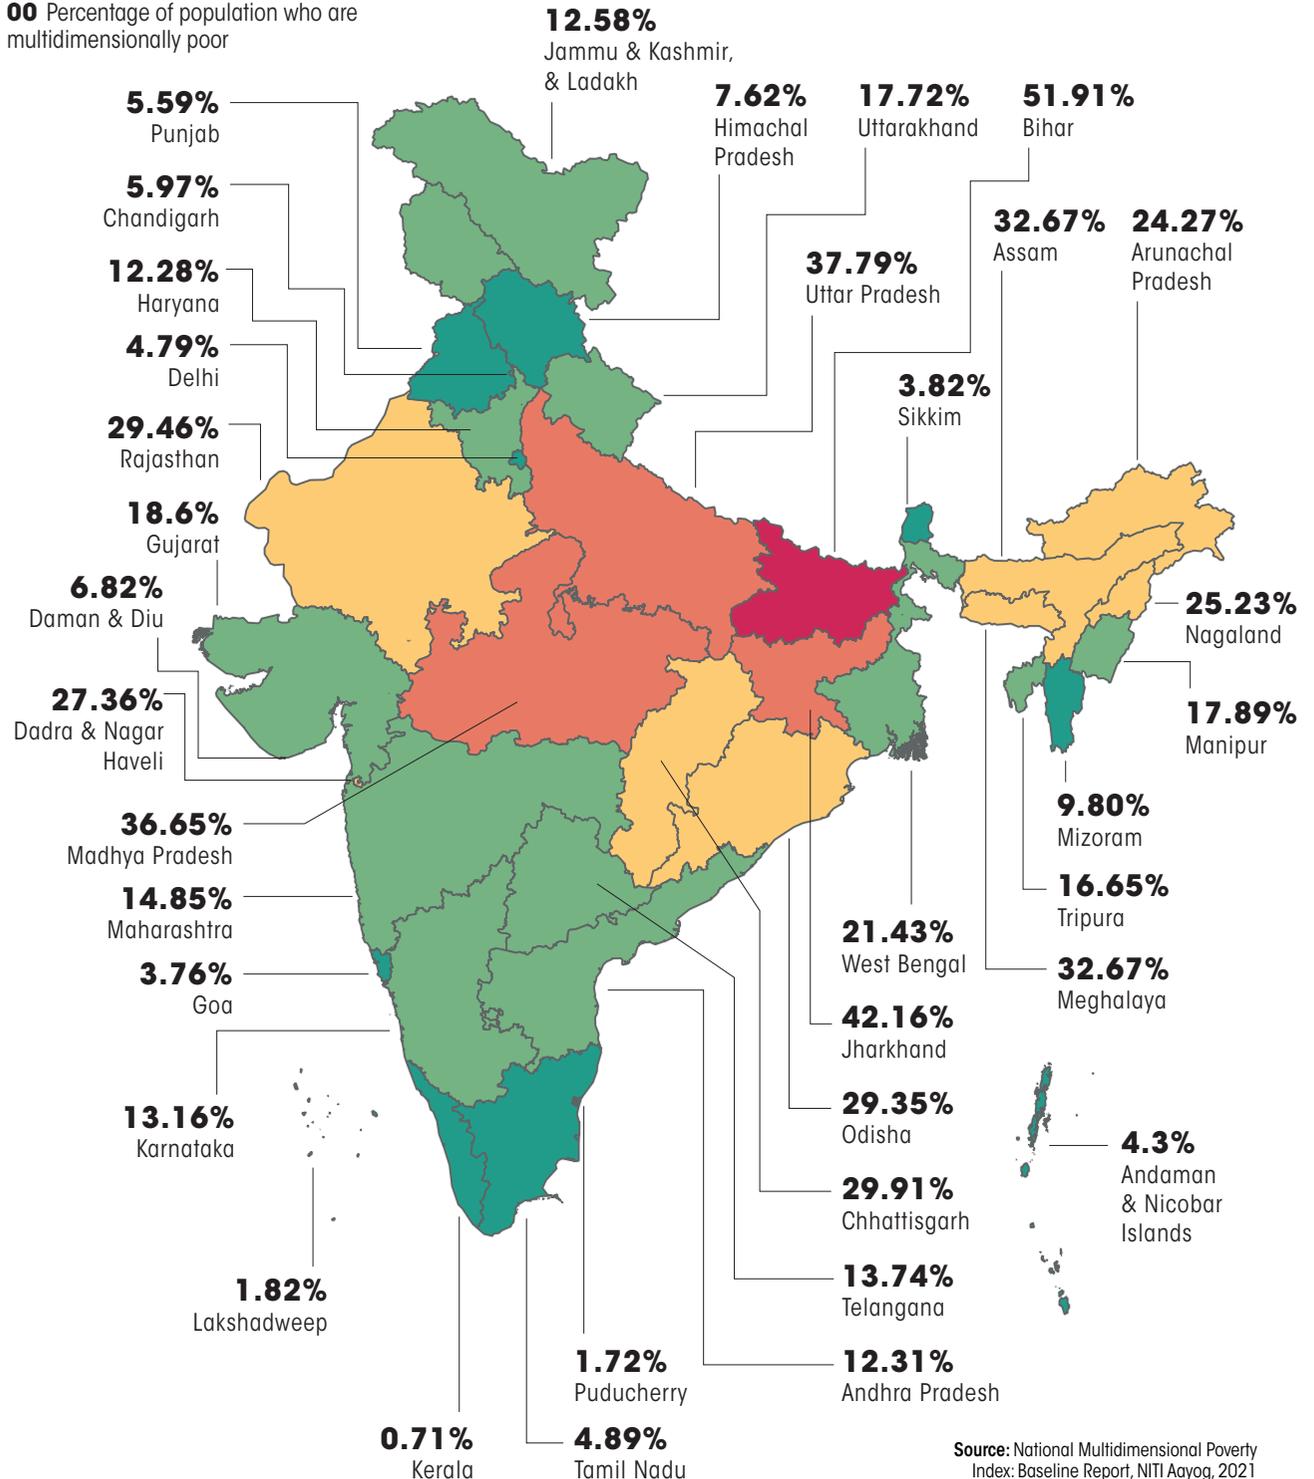

Multidimensional Poverty Index is based on National Family Health Survey-4 conducted in 2015-16; Source: National Multidimensional Poverty Index: Baseline Report, NITI Aayog, 2021

The poor lot

After the uncensored headcount ratio, the second order cut-off is applied to identify individuals who are multidimensionally poor. This is called the **headcount ratio**. **Currently, 25.01 per cent of the population is multidimensionally poor.** The **MPI** (denoted by the colour of the states) is a score that is calculated on the basis of how many are poor (headcount ratio) and how poor are the poor (intensity of poverty). The **intensity of poverty**, which changes with each state/UT, is the average proportion of deprivations experienced by multidimensionally poor individuals.

MPI score ■ 0.000 to 0.052 (best states) ■ 0.053 to 0.105 ■ 0.106 to 0.158 ■ 0.159 to 0.211 ■ 0.212 to 0.265 (worst states)

00 Percentage of population who are multidimensionally poor

Districts	% poor population
1. Yanam	5.18
2. Karaikal	3.13
3. Puducherry	1.30
4. Mahe	0.08

Districts of **Puducherry** are as per the 2011 Census of India. Due to there being a relatively lower number of districts, all Union Territories and the States of Sikkim and Goa share the same colour scale. The colour represents the MPI score of a district. The colour moves from green, through yellow, to red as the MPI score increases. Green represents areas with the lowest MPI scores while red represents areas with the highest MPI scores. The legend provides the range of MPI scores represented by a colour.

COVID-19 & SDGs

While the Sustainable Development Goals (SDGs) can help India and the world recover from the impacts of the COVID-19 pandemic, human development challenges such as poverty and undernutrition will continue to plague countries even in 2050

The wonder six

If countries focus on these six of the 17 SDGs, they can turn the COVID-19 pandemic from a short-term crisis into an opportunity for transformation towards long-term gains

Three growth scenarios

SDGs Push scenario outlines the impact of targeted policy interventions that can accelerate progress towards a more fair, resilient and green future

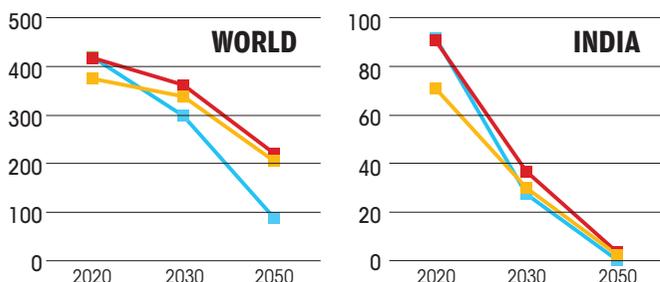

Baseline COVID-19 scenario represents significant pandemic-period increases in poverty and hunger and substantial longer-term negative consequences

No COVID-19 scenario describes economic growth without the impact of the pandemic

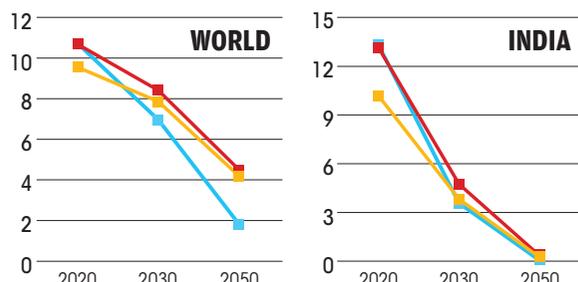

GOAL 1 India to have half a million women in poverty in 2050 even in the SDG push scenario

■ No COVID-19 scenario
 ■ Baseline COVID-19 scenario
 ■ SDGs Push scenario

INDICATOR FEMALE POVERTY HEADCOUNT (number of people in million)

INDICATOR POVERTY <math>< \\$1.90</math> PER DAY (% of population)

STATE OF INDIA@75

ECONOMY

India has a target of becoming a US\$ 4 trillion economy by 2022-23. It had reached US\$ 2.5 trillion in 2020 at the start of the pandemic

EMPLOYMENT

India's women labour force participation rate in urban areas has shrunk to 16 per cent. Its target is to increase the participation rate to 30 per cent by 2022-23

RESEARCH & DEVELOPMENT

India has been spending less than 1 per cent of its GDP on R&D since 2014-15. Its target is to increase the share to at least 2 per cent of GDP

HITS AND MISSES

At least 17 government targets have a deadline in 2022, when India celebrates its 75th Independence Day. The country, unfortunately, is most likely to miss almost all of the targets because of the slow progress made so far

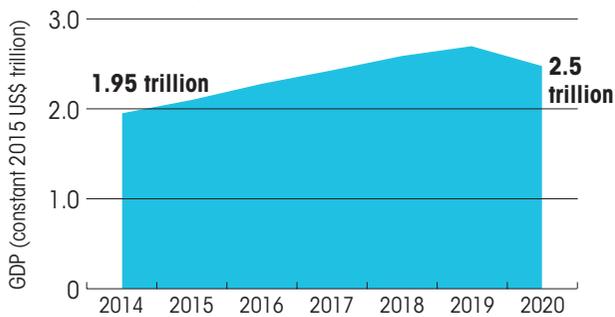

Economy

TARGET

To raise GDP to nearly US \$4 trillion by 2022-23

OFF TARGET

Gross Domestic Product (GDP) at constant prices refers to the volume level of GDP obtained by expressing values in terms of a base period

Source: World Bank

Employment

TARGET

Increase female labour force participation to at least 30 per cent by 2022-23

OFF TARGET

Labour force refers to the part of the population which supplies or offers to supply labour for pursuing economic activities for the production of goods and services and therefore, includes both 'employed' and 'unemployed' persons. **Labour Force Participation Rate** is defined as the percentage of population in the labour force

Source: PLFS Quarterly Bulletin July-Sept 2021, Ministry of Statistics and Programme Implementation

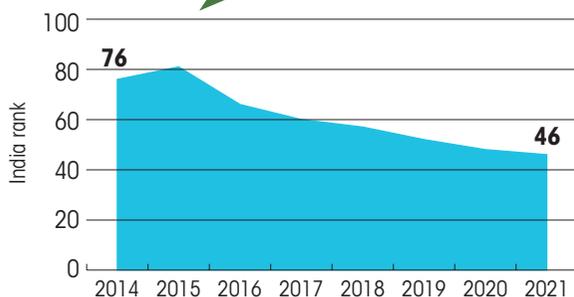

Technology and Innovation

TARGET

India should be among the top 50 countries in the Global Innovation Index by 2022-23

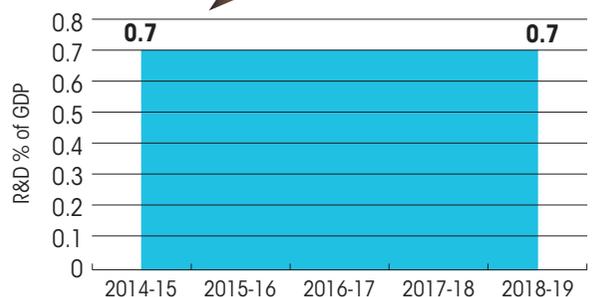

ACHIEVED

TARGET

India should spend at least 2 per cent of GDP on research and development with equal share from public and private sector

OFF TARGET

Source: Ministry of Science and Technology; August 10, 2021

TARGET

Under Atal Innovation Mission, set up at least **10,000 Atal Tinkering Labs** and **100 world-class incubation centres by 2020**

MISSED

India had **8,700 Atal Tinkering**

Labs and 68 incubation centres set up till October 2021

Housing for all

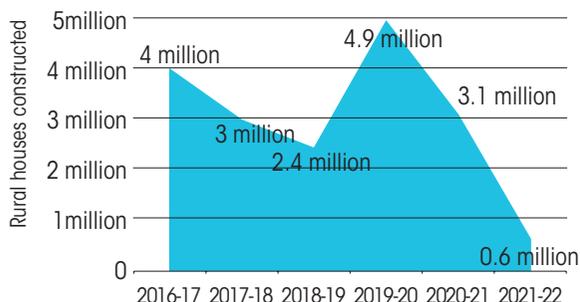

TARGET

Construct **29.5 million housing** units under the Pradhan Mantri Awas Yojana-Rural*

OFF TARGET

61.2% of the target achieved

18.04 million houses constructed in rural areas

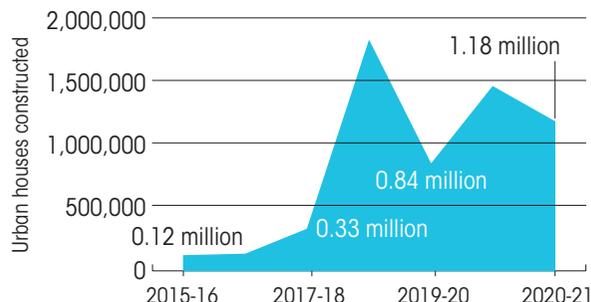

TARGET

Construct **12 million housing** units under Pradhan Mantri Awas Yojana-Urban

OFF TARGET

49% of the target achieved

5.87 million houses constructed in urban areas

STOCKHOLM@50

ENVIRONMENTAL GOVERNANCE

The world has seen a 38-fold increase in environmental laws since the Stockholm declaration in 1972

GLOBAL WARMING

The world is set to exceed 1.5°C by the end of the century. This will increase biodiversity loss, extreme weather events and trigger unprecedented air, water and food challenges

WATER SCARCITY

1 in 5 developing countries will face water shortages as water demand is expected to increase by 55 per cent by 2050

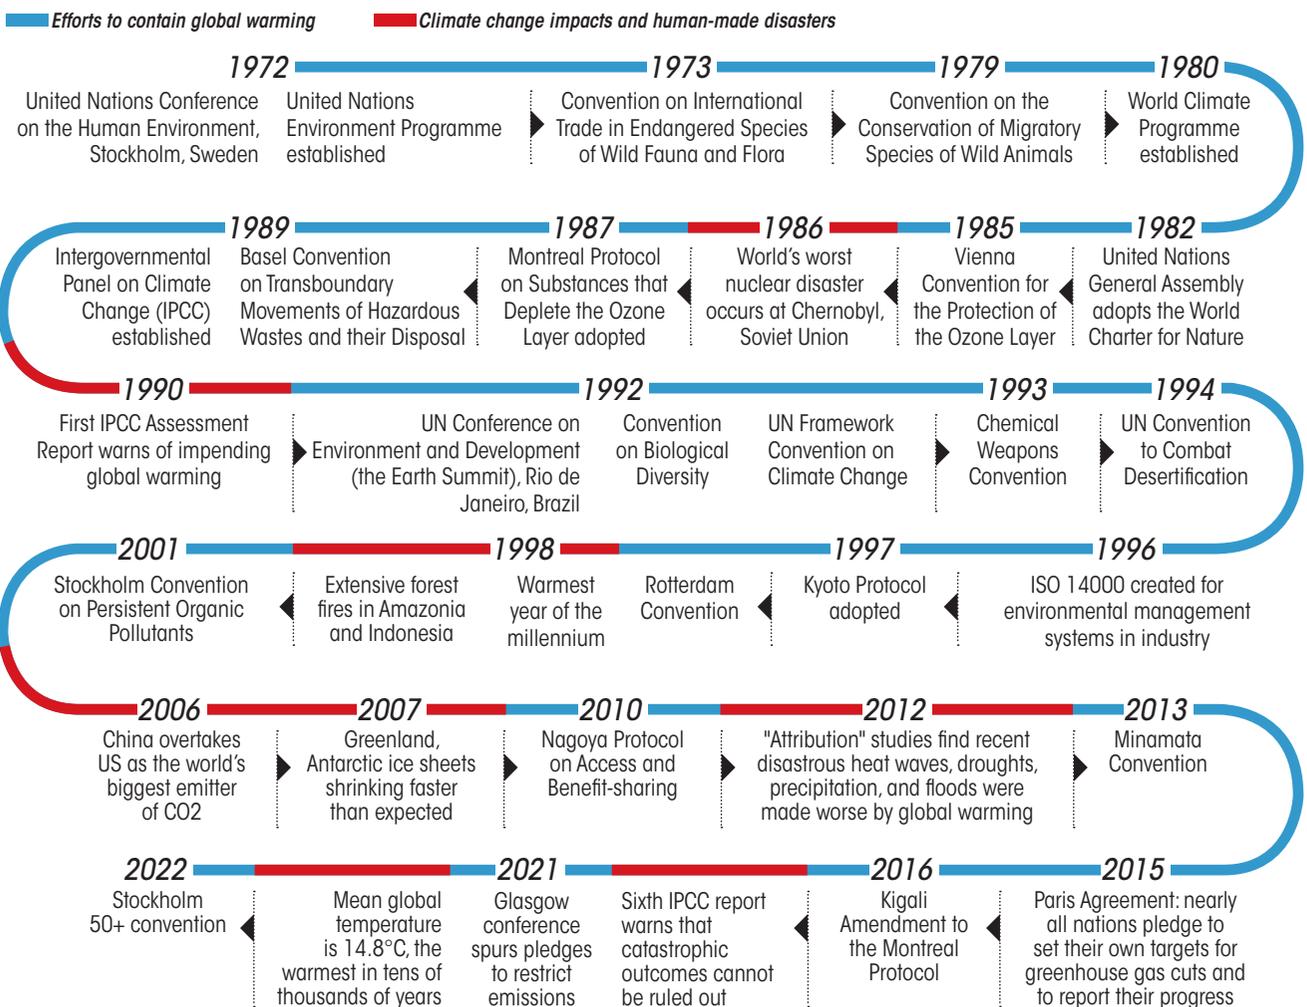

Environmental governance

It was the 1972 Stockholm conference, held exactly 50 years ago, which put environmental issues on the global agenda for the first time. It paved the way for other international conventions on the preservation of the environment. India passed its legislations on air (1981), water (1974) pollution, and forests conservation (1980) to give effect to the Stockholm convention. Today, over 176 countries have environmental framework laws; 150 countries have enshrined environmental protection or the right to a healthy environment in their constitutions; and 164 countries have created cabinet-level bodies responsible for environmental protection, as per the United Nations. The number of environmental laws has increased 38-fold globally since the declaration.

While the environment has now become an important agenda for most countries, the condition of the planet continues to worsen. Annual CO₂ emissions have reached 36.7 billion tonnes, which is more than double of what was emitted in 1972. This results in greater global warming, which has detrimental effects. The world has recorded a disaster related to weather, climate or water hazard every day on average over the past 50 years and each such event has killed 115 people and caused losses worth US\$202 million, as per the World Meteorological Organization. The world has recorded over 11,000 extreme disasters between 1970 and 2019 which have cumulatively claimed more than 2 million lives

What the world did after Stockholm

Major environmental conferences, treaties and disasters

Human development

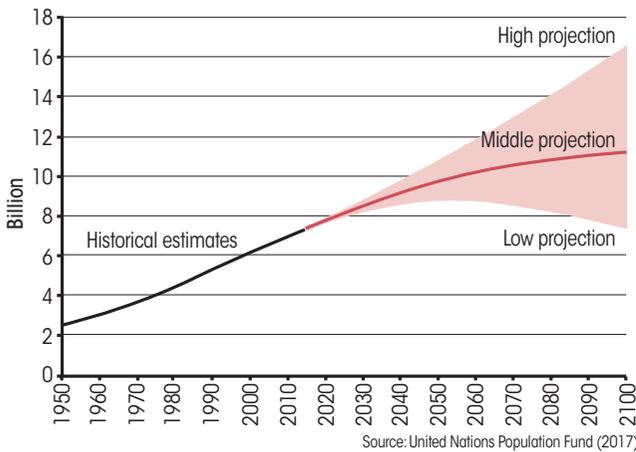

Population growth can affect the environment not only through the use of natural resources, but also through indirect impacts such as unplanned urbanisation

-  Trend in the opposite direction of what is desired
-  Trend in the right direction, but at a pace slower than desired
-  Trend in the right direction and at the desired pace

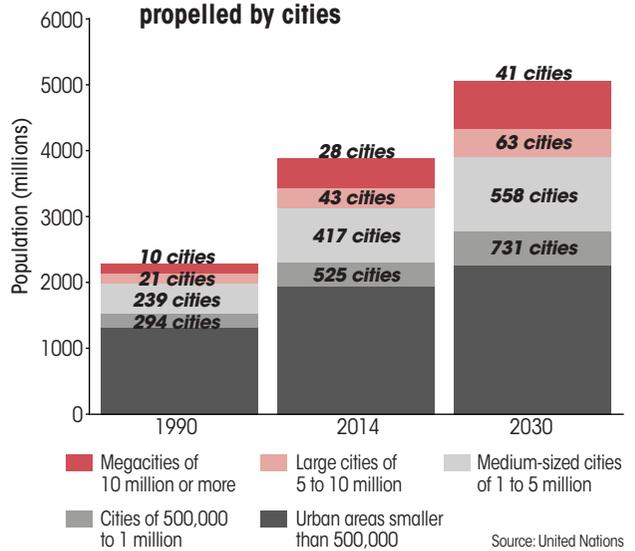

World population

The world's population increased from about 3.85 billion people in 1972 to 7.8 billion in 2022. The world population will continue to grow, average age will increase, populations will become more urban, and household sizes will become smaller

Projected world population

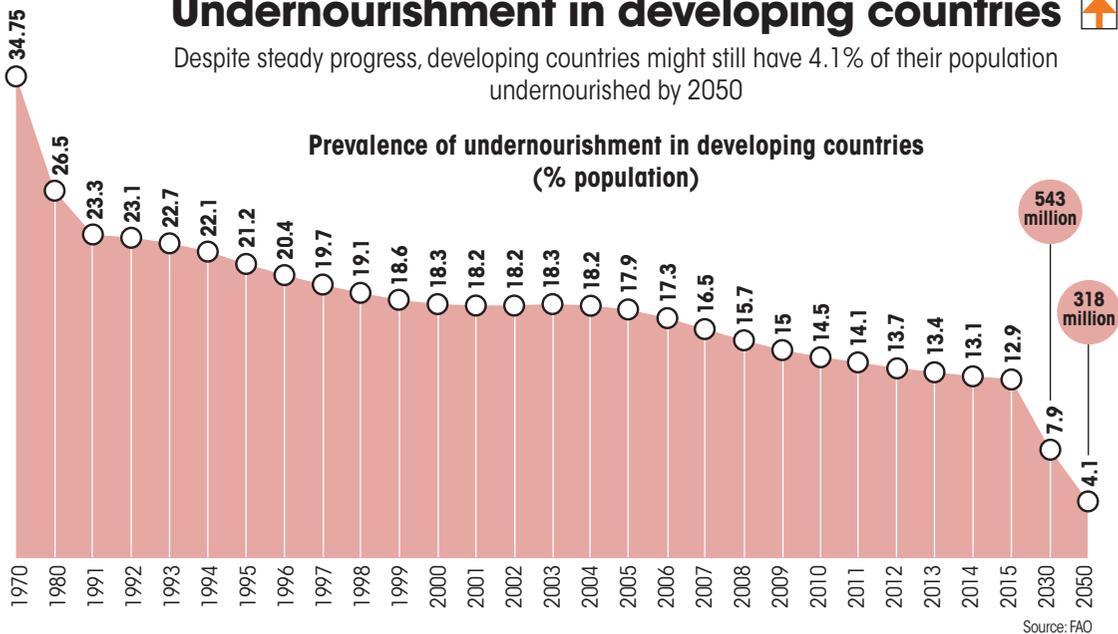

Global urban population growth propelled by cities

Undernourishment in developing countries

Despite steady progress, developing countries might still have 4.1% of their population undernourished by 2050

Prevalence of undernourishment in developing countries (% population)

Air

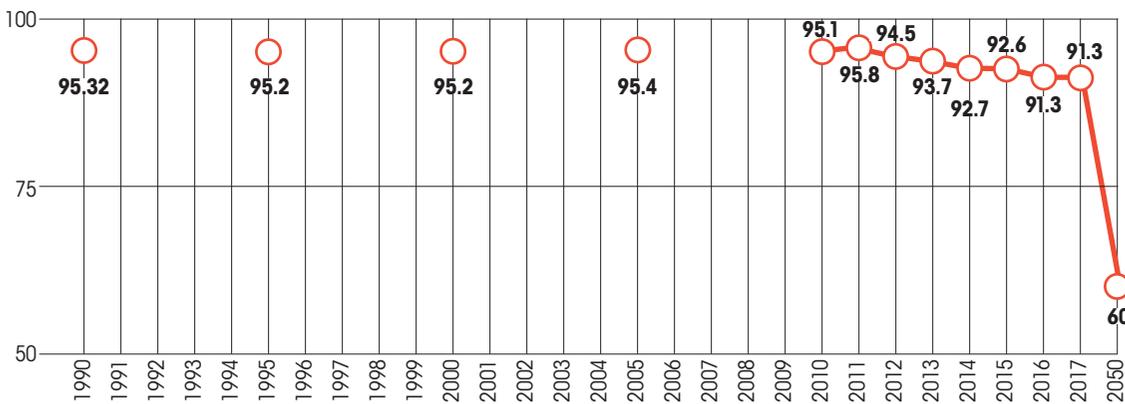

Globally, the highest annual average concentrations of PM 2.5 are seen in areas affected by windblown sand and dust (northern Africa and west Asia), fires (Central Africa and Latin America) and anthropogenic pollution (South and East Asia). Cities with the highest levels were clustered in east-central China and the Indo-Gangetic Plain

-  Trend in the opposite direction of what is desired
-  Trend in the right direction, but at a pace slower than desired
-  Trend in the right direction and at the desired pace

PM 2.5 exposure

Even in 2050, a perceptibly high population of the world will continue to remain exposed to PM2.5, which remains the highest environmental risk factor for global burden of diseases

% population exposed to PM2.5 levels exceeding WHO guideline value of 10 µg/m3

Source: WHO and GEO-6

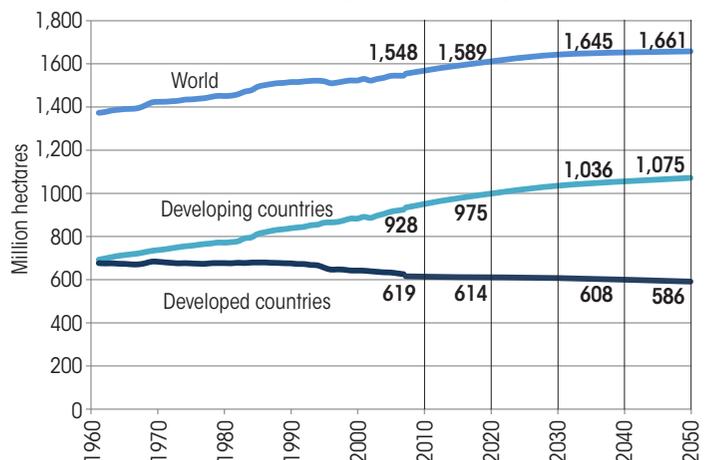

Land

Agricultural and food production are still responsible for most of the changes on land, including forests and other types of ecosystems. Human-induced land degradation remains a fundamental environmental problem affecting food security, livelihoods, and lives of the people on this planet

Agriculture

By 2050, the world needs to produce at least 50 per cent more food to feed the projected global population of 10 billion people. Current land management cannot achieve this while preserving ecosystem services, the loss of natural capital, combating climate change, addressing energy and water security, and promoting gender and social equality

Arable land and land under permanent crops

Area equipped for irrigation *

The area equipped for irrigation could expand by 20 million ha (or 6.6 percent) over the period from 2005/2007 to 2050, nearly all of it in the developing countries. The annual growth rate, though, is slowing

	Area equipped for irrigation Million ha				Annual growth (% p.a.)		
	1961/1963	2005/2007	2030	2050	1961-2007	1997-2007	2005/2007-2050
World	142	302	314	322	1.8	1.3	0.1
Developed countries	38	68	69	69	1.5	0.1	0.0
Developing countries	103	235	246	253	1.9	1.7	0.2

* Includes irrigated land that is being used for farming and that is temporarily or permanently closed

Major crops

Despite the increases in land under cultivation in the land-abundant countries, much of the agricultural production growth will be based on the growth of yields that will be dependent on innovations and use of fertilisers

	Production (million tonnes)			Harvested area (million hectares)			Yield (tonnes/hectares)		
	1961/1963	2005/2007	2050	1961/1963	2005/2007	2050	1961/1963	2005/2007	2050
Wheat	235	614	858	206	222	225	1.1	2.8	3.8
Rice (paddy)	230	644	827	118	158	155	1.9	4.1	5.3
Maize	210	736	1178	106	155	194	2.0	4.7	6.1
Soybeans	27	217	390	24	94	124	1.1	2.3	3.2
Pulses	44	60	100	69	73	62	0.6	0.8	1.6
Millet	25	32	60	43	37	42	0.6	0.9	1.4
Seed cotton	30	71	100	32	36	39	0.9	2.0	2.6
Groundnuts	15	36	68	17	24	35	0.9	1.5	2.0
Sugarcane	428	1452	2822	9	21	27	49	68	104
All cereals	843	2069	3009	654	704	763	1.3	2.9	3.9
All crops				978	1,256	1,380	439	924	1,296

Fertiliser consumption

Overall, fertiliser consumption could increase from 166 million tonnes in 2005/2007 to 263 million tonnes in 2050, but there will be a continuing slowdown in the growth of fertiliser consumption

	Million tonnes of nutrient (N, P and K)				% increase per annum		
	1961/1963	2005/2007	2050	1961-2007	1997-2007	2005/2007-2030	2030-2050
World	34.3	166	263	3.0	2.4	1.4	0.7
Per harvested hectare							
World	35.0	132	191	2.5	1.7	1.1	0.5

Source: Food and Agriculture Organization

Extreme events

A warmer climate will intensify very wet and very dry weather and climate events, with implications for flooding or drought, but the location and frequency of these events depend on projected changes in regional atmospheric circulation

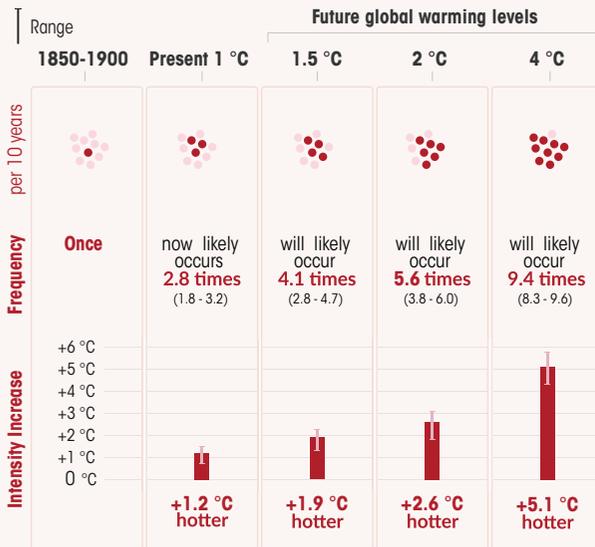

-  Trend in the opposite direction of what is desired
-  Trend in the right direction, but at a pace slower than desired
-  Trend in the right direction and at the desired pace

Hot temperature extremes over land

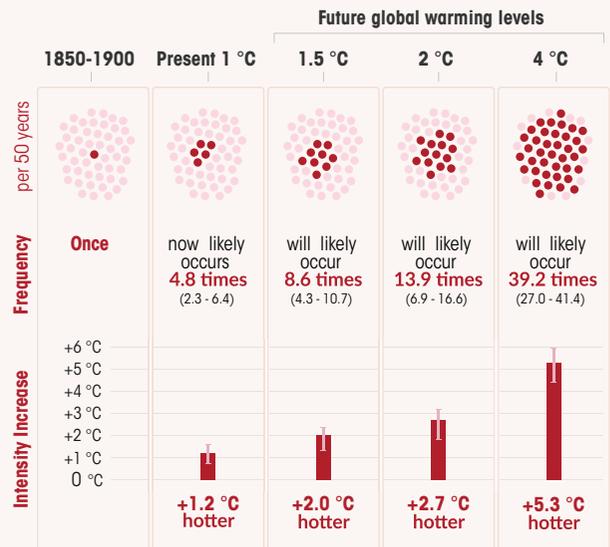

10-year event

Frequency and increase in intensity of extreme temperature event that occurred once in 10 years on average in a climate without human influence

50-year event

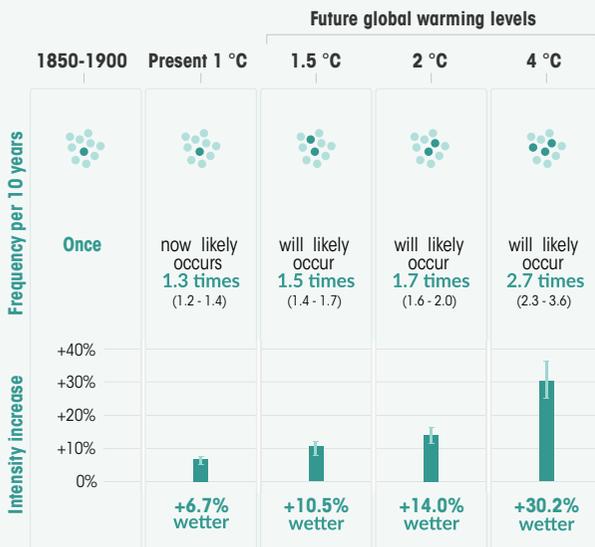

Frequency and increase in intensity of extreme temperature event that occurred once in 50 years on average in a climate without human influence

Heavy precipitation over land

10-year event

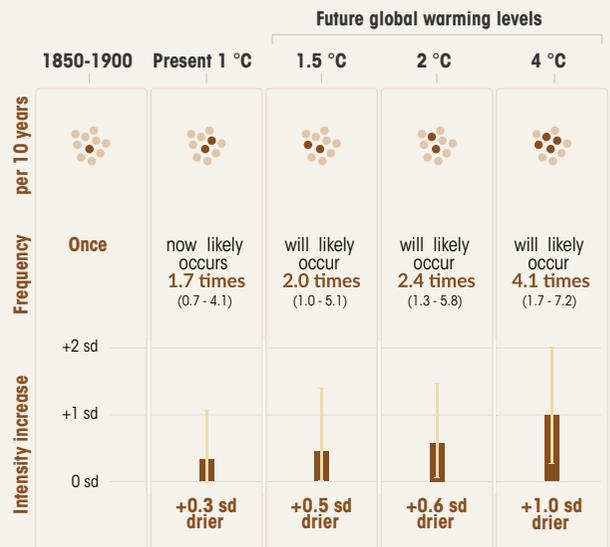

Frequency and increase in intensity of heavy 1-day precipitation event that occurred once in 10 years on average in a climate without human influence

Agricultural & ecological droughts in drying regions

10-year event

Frequency and increase in intensity of an agricultural and ecological drought event that occurred once in 10 years on average across drying regions in a climate without human influence

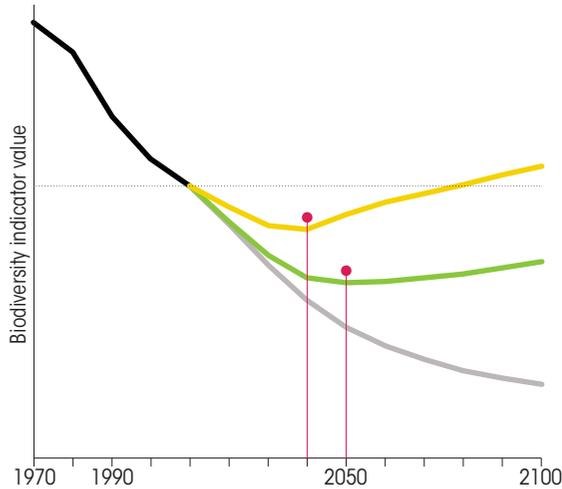

Biodiversity

The world saw an average 68% decrease in population sizes of mammals, birds, amphibians, reptiles, and fish between 1970 and 2016, suggesting that biodiversity is being destroyed by humans at an unprecedented rate

Biodiversity loss

Conservation is critical but not enough to restore biodiversity. The world now needs to also transform food production and consumption patterns. Such a transformation would also provide large co-benefits for the environment, through reduced greenhouse gas emissions, fertiliser application and irrigation water consumption

In order to bend the curve any earlier than 2050 and minimise biodiversity losses, ambitious conservation needs to be combined with sustainable production and consumption measures (the yellow line)

2010 Indicator value

Conservation actions are crucial but the green line shows that alone they cannot bend the curve before 2050, and will allow much greater overall losses

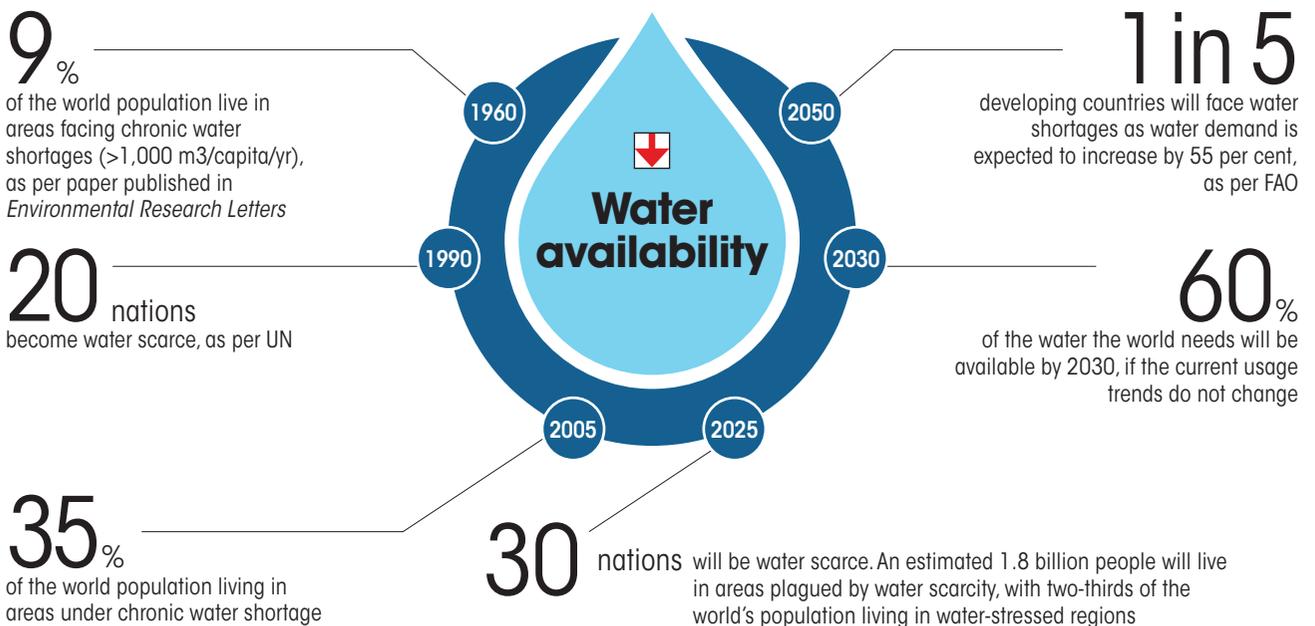

The grey line shows that biodiversity continues to decline if we continue on our current path and recovery does not begin before 2100

— Historical — Baseline — Increased conservation efforts — Integrated Action Portfolio* ● The date when recovery begins

* combines all three single interventions: increased conservation measures, sustainable production and consumption

Water

Per capita freshwater availability is decreasing with population growth, coupled with agricultural, industrial and energy requirements, while continents are becoming drier in many places due to climate change impacts

Oceans and marine life

Global sea level has been rising at an accelerating rate since about 1970, and over the last century, it has risen more than in any century in at least 3,000 years. This trend will only worsen with time

-  Trend in the opposite direction of what is desired

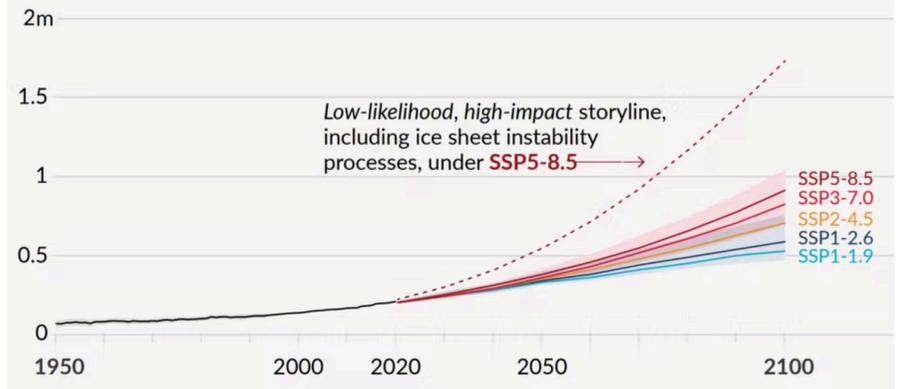

-  Trend in the right direction, but at a pace slower than desired

-  Trend in the right direction and at the desired pace

Sea level rise

Over the last decade, global average sea level has risen at a rate of about 4 millimetres per year (1.5 inches per decade). This increase is due to two main factors: the melting of ice in mountain glaciers and at the poles, and the expansion of water in the ocean as it takes up heat

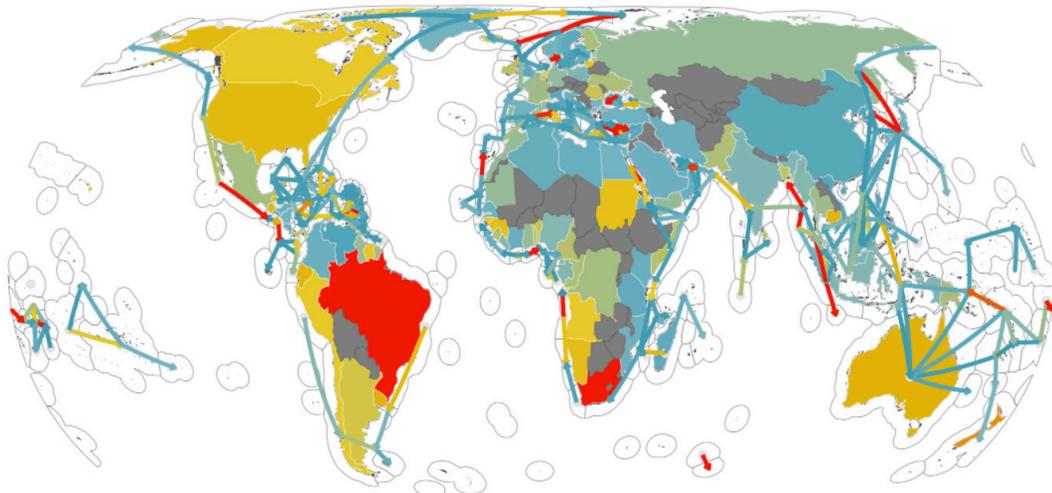

Global mean sea level change relative to 1900

*SSP1-1.9 is the most sustainable path; SSP 5-8.5 is the least sustainable path; Source: IPCC Sixth Assessment Report

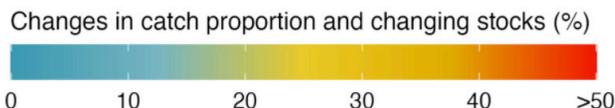

Dwindling fish stocks

By 2030, 23 per cent of the transboundary fish stocks would have shifted. By 2100, a total of 45 per cent of fish stocks are expected to shift from their historical habitats and migration paths globally and 82 per cent of exclusive economic zone waters will experience at least one shifting stock

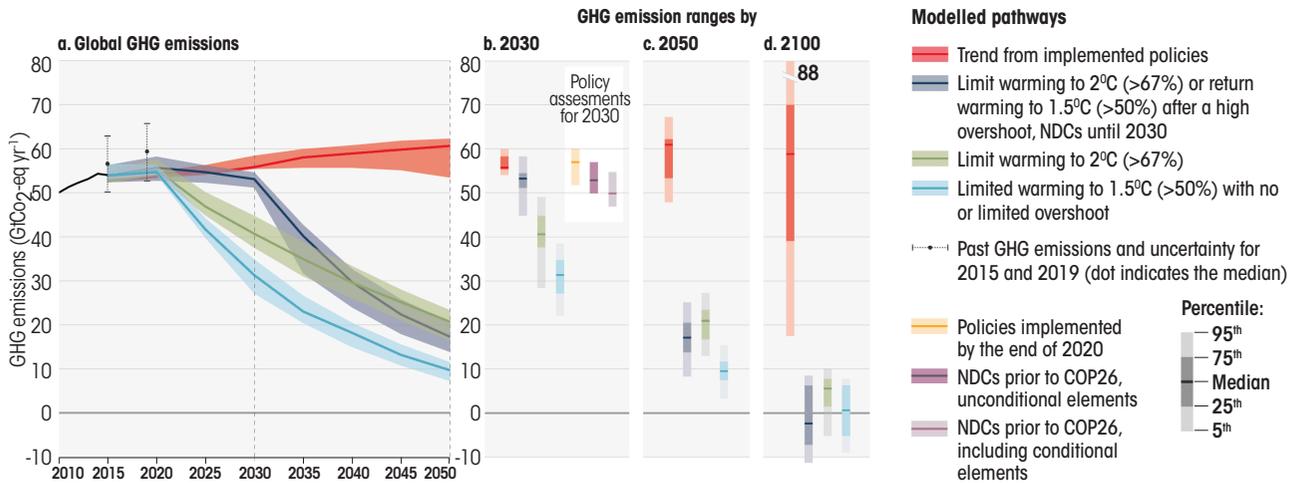

Changes in stock proportion of neighboring Exclusive Economic Zones by 2030 (2021–2040) relative to 1951–2005. Lines represent the average change in transboundary stock share ratio with arrows going from EEZs with projected decreases in stock share (point) to those gaining shares (arrowhead). Land polygons depict the percentage of stocks that are projected to change their stock share ratio beyond the identified threat point

Source: 'Timing and magnitude of climate-driven range shifts in transboundary fish stocks challenge their management', published in *Global Change Biology*

Greenhouse gases

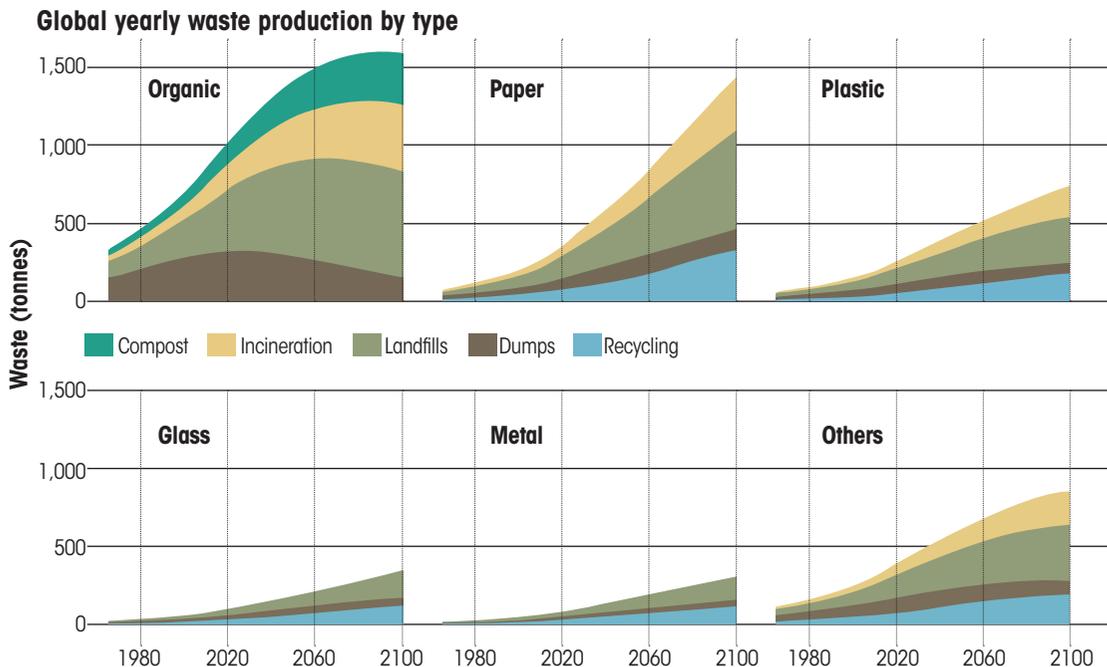

Global GHG emissions in 2030 associated with the implementation of nationally determined contributions (NDCs), announced prior to COP26 would make it likely that warming will exceed 1.5°C during the 21st century. Likely limiting warming to below 2°C would then rely on a rapid acceleration of mitigation efforts after 2030. Policies implemented by the end of 2020 are projected to result in higher global GHG emissions than those implied by NDCs

Municipal solid waste

Global municipal waste production causes multiple environmental impacts, including greenhouse gas emissions, ocean plastic accumulation, and nitrogen pollution

Global waste generation has increased from 635 tonnes in 1965 to 1999 tonnes in 2015 and is projected to reach 3,539 tonnes by 2050. From 2015 to 2050, the global share of organic waste declines from 47% to 39%, while all other waste types' shares increase, especially paper. This means environmental loads will continue to increase in the future

Source: 'The world's growing municipal solid waste: trends and impacts', published in *IOF Science*

STATE OF RIVERS

HEAVY METALS CONTAMINATION

74% river monitoring stations have alarming levels of heavy toxic metals, such as iron and nickel, which have severe health impacts

All river stations monitored in Gujarat, Haryana, Manipur and Tripura had high levels of toxic metals

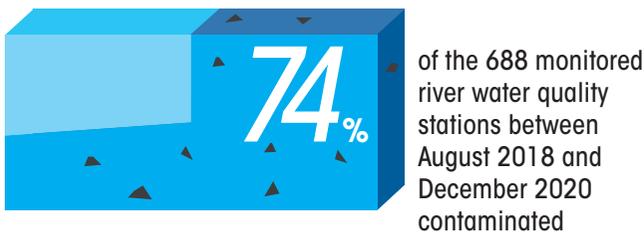

RIVER POLLUTION HOTSPOTS

40% of the river monitoring stations have unhealthy levels of total coliform that signify the presence of faecal matter contamination in them

Heavy metals contamination

Three out of every four river monitoring stations in India have alarming levels of heavy toxic metals—lead, iron, nickel, cadmium, arsenic, chromium and copper. In one-fourth of the monitoring stations, which are spread across 117 rivers and tributaries, high levels of two or more toxic metals were reported. Of the 33 monitoring stations in Ganga, 10 had high levels of contaminants. The river has high levels of lead, iron, nickel, cadmium and arsenic.

The country has 764 river quality monitoring stations across 28 states. Of these, the Central Water Commission tested water samples from 688 stations for heavy metals between August 2018 and December 2020

ARSENIC

8 monitoring stations contaminated

Permissible limit | **10 µg/L**

Polluted rivers: **8 rivers in six states**

Most polluted site | river | state: **Porakudi** (13.33 µg/L or 1.3 times the safe levels) | **Arasalar river (a tributary of Cauvery) | Tamil Nadu**

Pollution sources: **Arsenic containing fungicides, pesticides and herbicides, metal smelters, byproducts of mining activities, chemical wastes**

Health effects: **Conjunctivitis, hyperkeratosis, hyperpigmentation, cardiovascular diseases, disturbance in the peripheral vascular and nervous systems, skin cancer, gangrene, leucomelosis, non pitting swelling, hepatomegaly and splenomegaly**

CADMIUM

11 monitoring stations contaminated

Polluted rivers: **11 rivers in nine states**

Most polluted site | river | state: **Todarpur** (12.57 µg/L or 4.19 times the safe levels) | **Sukheta | Uttar Pradesh**

Pollution sources: **Cadmium-producing industries, electroplating, welding**

Health effects: **Skeletal damage, renal tubular dysfunction, high blood pressure, and lung damage and cancer**

CHROMIUM

46 water quality monitoring stations contaminated

Permissible limit | **50 µg/L**

Polluted rivers: **33 rivers in 19 states**

Most polluted site | river | state: **MBPL** (180.47µg/L or 3.6 times the safe levels) | **Hasdeo River | Chhattisgarh**

Pollution sources: **Chromium metallurgical and chemical industries and cement and asbestos units**

Health effects: **Skin rashes, upset stomach and ulcers, respiratory problems, weakened immune systems, kidney and liver damage and lung cancer**

COPPER

17 water quality monitoring stations contaminated

Permissible limit | **50 µg/L**

Polluted rivers: **17 rivers in 10 states**

Most polluted site | river | state: **Badlapur** (132.64 µg/L or 2.6 times the safe levels) | **Ulhas** | **Maharashtra**

Pollution sources: **Copper, iron, steel and fertilizer industries, burning of wood, discharge of mine tailings, fly ash, municipal and industrial wastes**

Health effects: **Irritation of the nose, mouth and eyes, headaches, stomachaches, dizziness, vomiting and diarrhoea, liver and kidney damage, brain damage, renal disease**

IRON

414 water quality monitoring stations contaminated

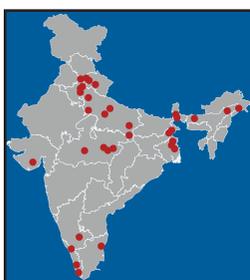

Permissible limit | **300 µg/L**

Polluted rivers: **227 rivers in 24 states**

Most polluted site | river | state: **Farakka** (11,240µg/L or 37.4 times the safe levels) | **Feeder Canal** | **West Bengal**

Pollution sources: **Iron, steel, alloys, construction, transportation, machine manufacturing**

Health effects: **Liver cirrhosis, diabetes, and susceptibility to heart attacks**

LEAD

34 water quality monitoring stations contaminated

Permissible limit | **10µg/L**

Polluted rivers: **24 rivers in 12 states**

Most polluted site | river | state: **Chopan** (67.55 µg/L or 6.7 times the safe levels) |

Sone | **Uttar Pradesh**

Pollution sources: **Automobile emissions, lead smelters, burning of coal, mining**

Health effects: **Anaemia, kidney disease, nausea, anorexia, and severe abdominal cramps, muscle aches and joint pain, lung damage, difficulty in breathing**

NICKEL

199 water quality monitoring stations contaminated

Permissible limit | **20µg/L**

Polluted rivers: **121 rivers in 25 states**

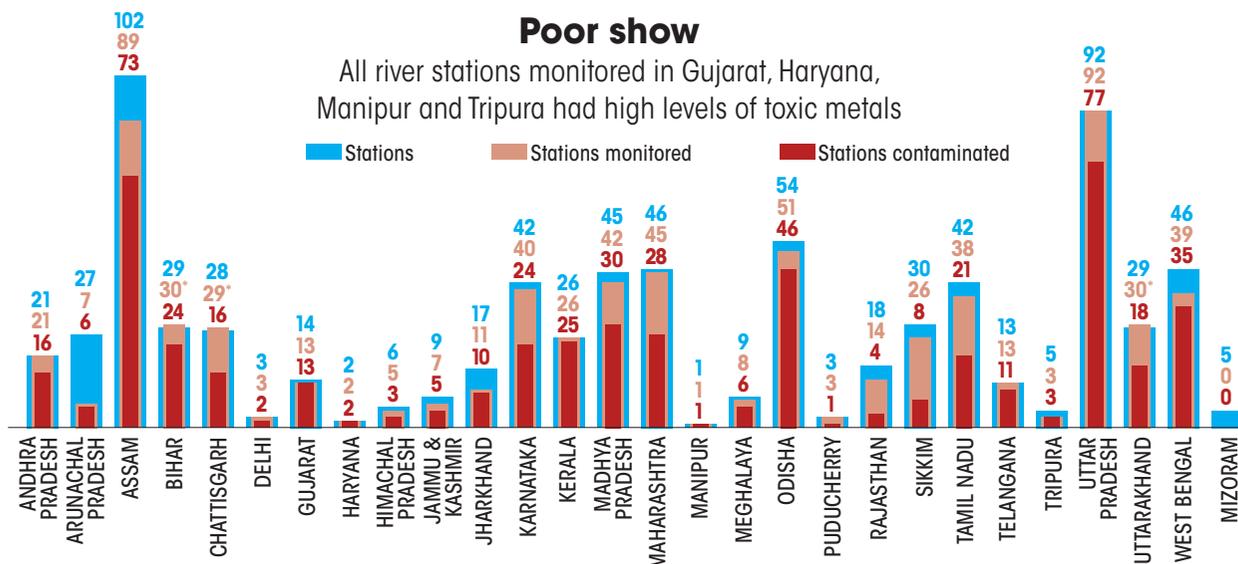

Most polluted site | river | state: **Elunuthimangalam** (242.90 µg/L or 12 times the safe levels) | **Noyyal river** | **Tamil Nadu**

Pollution sources: **Metallurgical industries, burning of coal**

Health effects: **Chest constriction, chills and sweating, shortness of breath, coughing, muscle pains, fatigue, gastrointestinal discomfort and in severe cases, convulsions and delirium**

Poor show

All river stations monitored in Gujarat, Haryana, Manipur and Tripura had high levels of toxic metals

*Data discrepancy at source

River pollution hotspots

Of the 588 water quality stations monitored for pollution, total coliform and biochemical oxygen demand remain high in 239 and 88 stations across 21 states. This indicates poor wastewater treatment from industry, agriculture and domestic households and demands attention. India dumps 72 per cent of its sewage waste without treatment. Ten states do not treat their sewage at all, as per the Central Pollution Control Board

AMMONIA

A colourless gas with a characteristic pungent smell, which dissolves in water to give a strongly alkaline solution

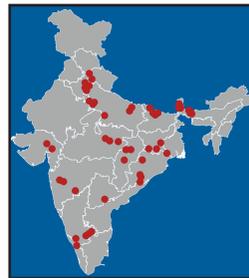

Permissible limit | **1.2 mg/l or less**

Polluted stations: **8 in 4 states**

Most polluted site: **Vautha, Sabarmati river, Gujarat**

Primary sources: **Agricultural sources including accidental releases of ammonia-rich fertiliser during transport and livestock waste**

Why it matters: **Cause loss of equilibrium, convulsions, coma, and death in humans and also impacts freshwater organisms, and affects hatching and growth rates in fishes.**

DISSOLVED OXYGEN (DO)

It is a measure of how much oxygen is dissolved in the water—the amount of oxygen available to living aquatic organisms

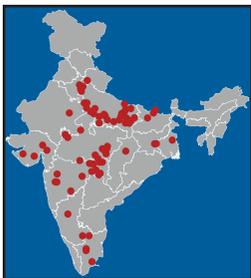

Permissible limit: **5 mg/l or more**

Polluted stations: **58 in 20 states**

Most polluted site: **Roorkee, Solani river, Uttarakhand**

Primary sources: **If there is an excess of decaying organic material, in a body of water with infrequent or no turnover, the oxygen at lower water levels will get used up quicker**

Why it matters: **Dissolved oxygen is necessary to many forms of life including fish, invertebrates, bacteria and plants.**

BIOCHEMICAL OXYGEN DEMAND (BOD)

It is the amount of dissolved oxygen (DO) needed by aerobic biological organisms to break down organic material present in a

given water sample at certain temperature over a specific time period

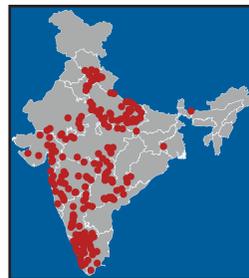

Permissible limit: **Up to 3 mg/l**

Polluted stations: **88 in 16 states**

Most polluted site: **Roorkee, Solani river, Uttarakhand**

Primary sources: **Domestic and industrial wastes**

Why it matters: **BOD test is widely used to determine the pollution strength of domestic and industrial wastes in terms of the oxygen that they will require if discharged into natural watercourses in which aerobic conditions exist. The test is one of the most important in stream-pollution-control activities.**

TOTAL COLIFORM (TC)

Total coliforms include bacteria that are found in the soil, in water that has been influenced by surface water, and in human or animal waste

Permissible limit: **500**

MPN/100 ml or less

Polluted stations: **239 in 19 states**

Most polluted site: **Galeta, Hindon river, Uttar Pradesh**

Primary sources: **Sewage discharge, open defecation, cattle wallowing, disposal of animal carcass and unburnt bodies**

Why it matters: **Aids in the spread of water-borne diseases.**

Analysis includes both monsoon and non-monsoon seasons

STATE OF OCEANS

COASTAL EROSION

More than a third of India's coastline that is spread across 6,907 km witnessed some degree of erosion between 1990 and 2018

VULNERABLE COASTLINES

West Bengal is the worst hit with over 60 per cent of its shoreline under erosion

OCEAN HEALTH

India's score in the Ocean Health Index, a measure that looks at how ocean resources are being exploited, is on the decline

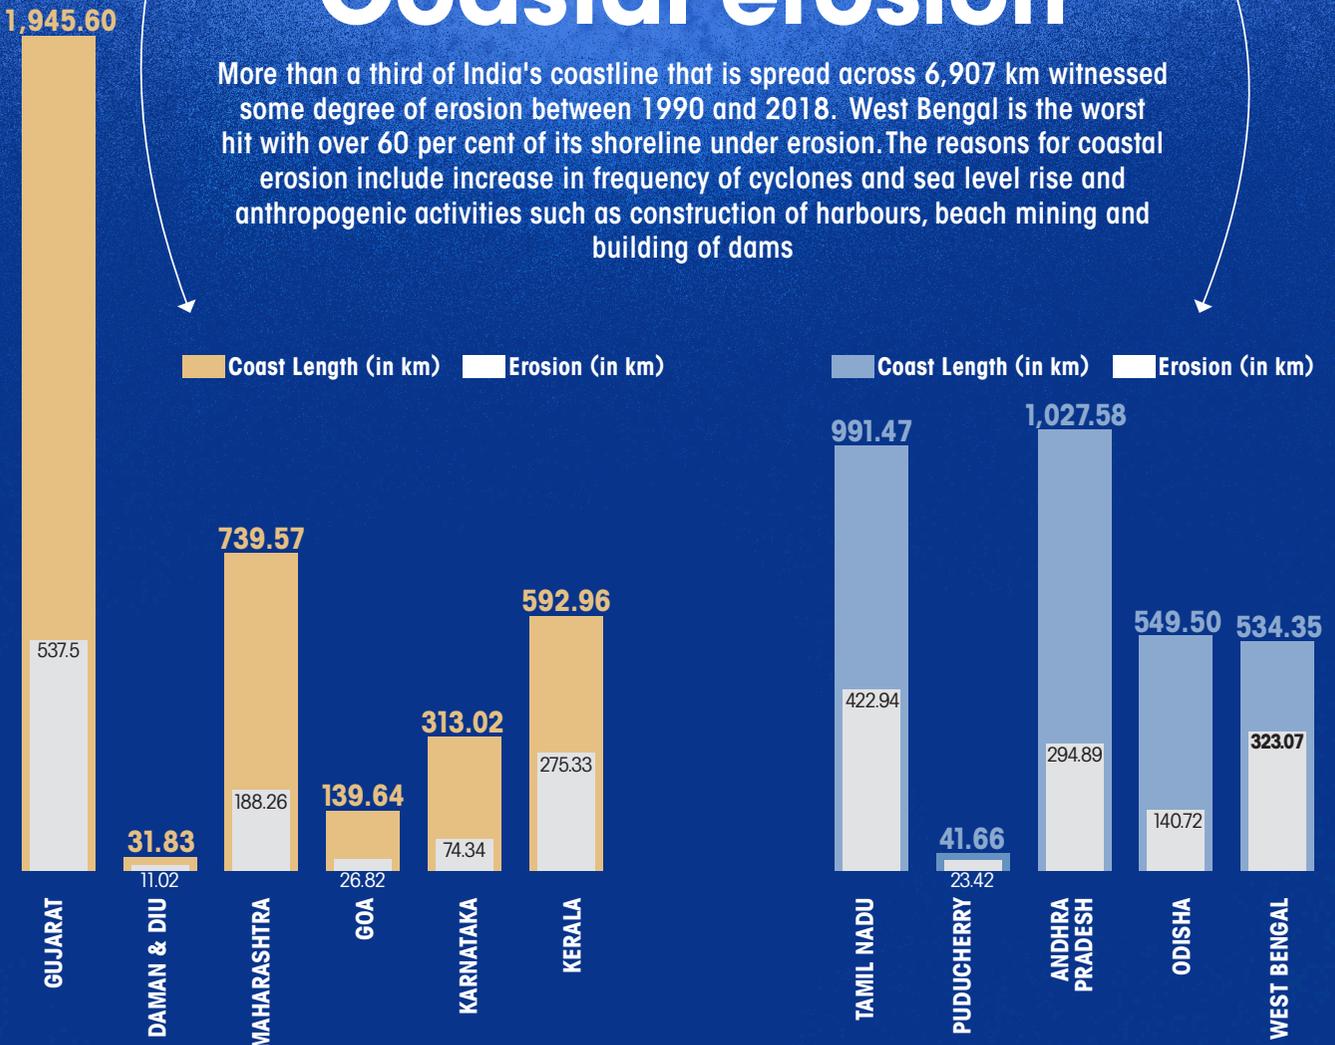

WEST COAST

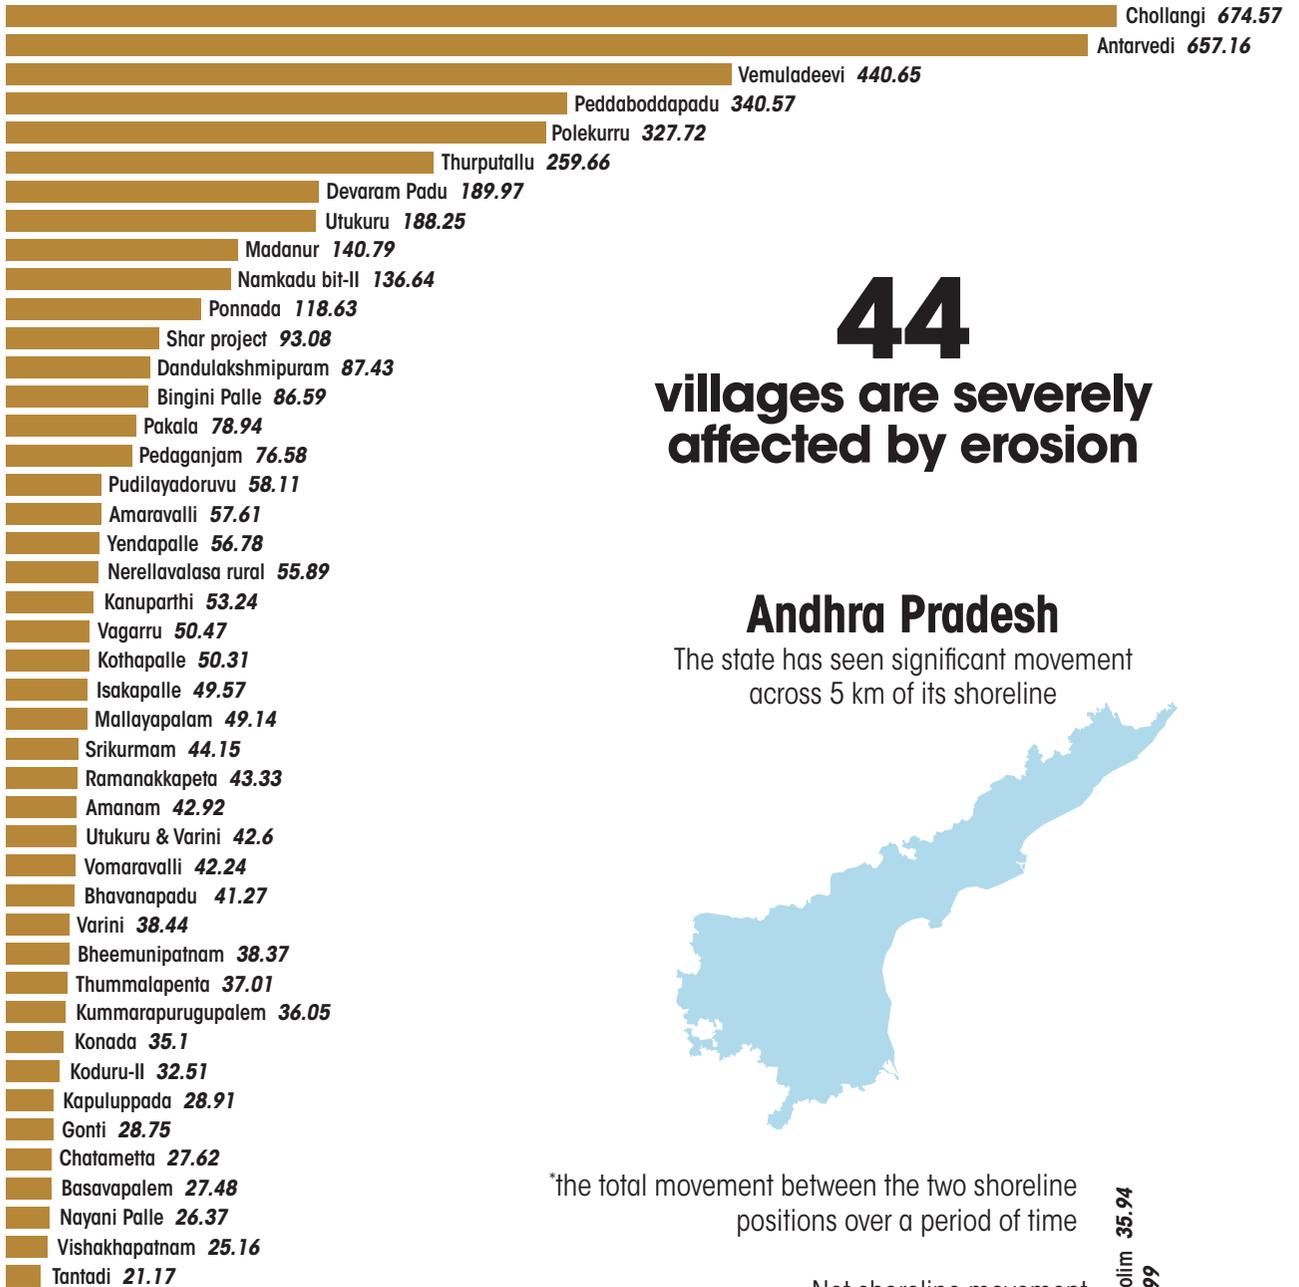

EAST COAST

Coastal erosion

More than a third of India's coastline that is spread across 6,907 km witnessed some degree of erosion between 1990 and 2018. West Bengal is the worst hit with over 60 per cent of its shoreline under erosion. The reasons for coastal erosion include increase in frequency of cyclones and sea level rise and anthropogenic activities such as construction of harbours, beach mining and building of dams

OCEAN HEALTH

While the **global average** of the Ocean Health Index, a measure that looks at how sustainably humans are exploiting ocean resources, **has improved** between 2012 and 2021, **India's score** in the index **has declined** over the same period

10

benefits that people want and need from the ocean and how they are exploited by humans are measured in the index

49.69

is the global score under food provision, which suggests sea food is being harvested unsustainably. India's score is 31.32

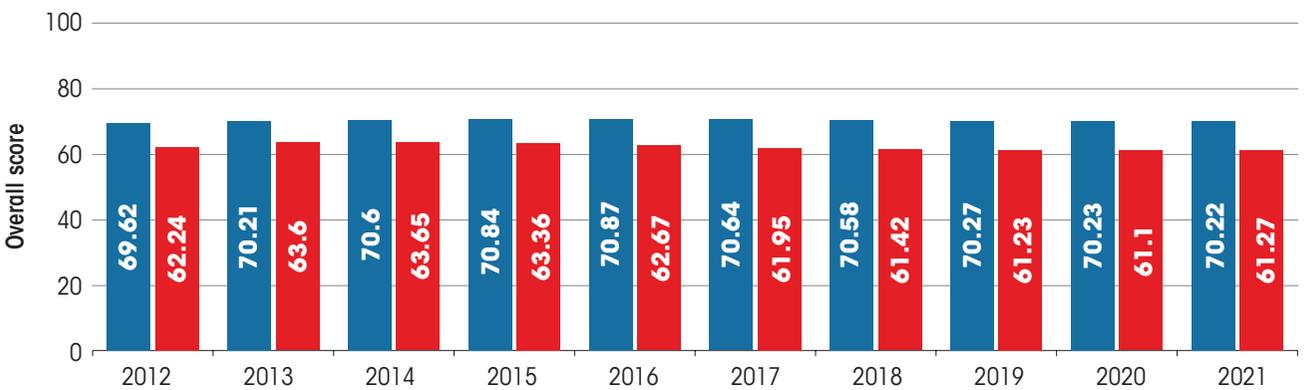

50.82

is the global score under tourism and recreation, which means tourism activities are being carried out in an unsustainable way. India's score is 49.85

Overall health of our oceans

Ocean health index is a framework for assessing the sustainable provisioning of benefits and services people expect from healthy oceans, such as food, cultural and social value, and jobs. Each ocean benefit for humans is a goal within the index

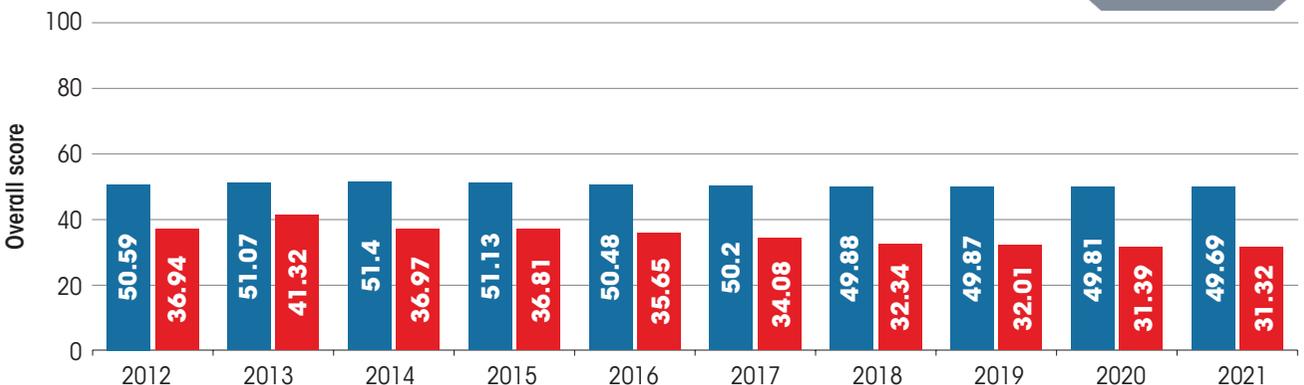

■ Global average ■ India average

Goal 1: Food provision

The sustainable harvest of seafood from wild-caught fisheries and mariculture

■ Global average ■ India average

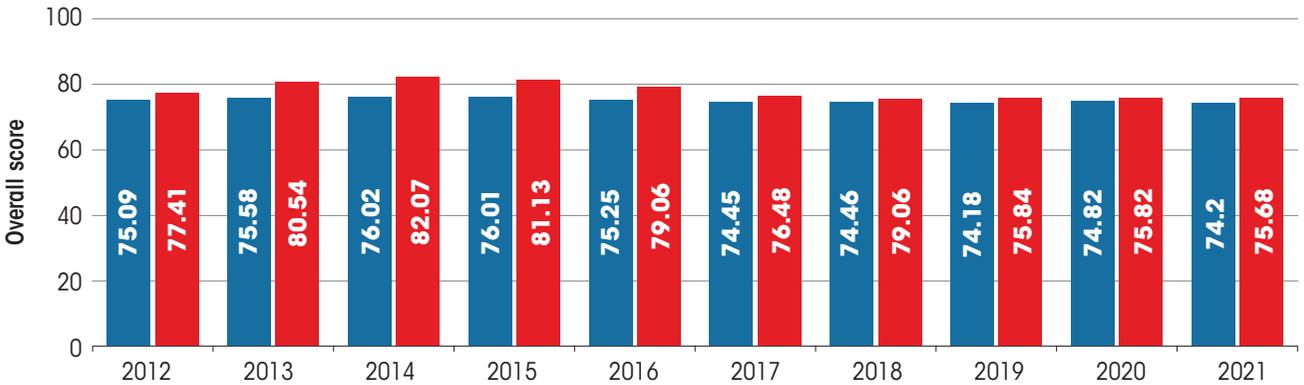

Source: Ocean Health Index, 2021

Goal 2: Artisanal fishing opportunity

The opportunity for small-scale fishers to supply catch for their families, local communities or sell in the local market

■ Global average ■ India average

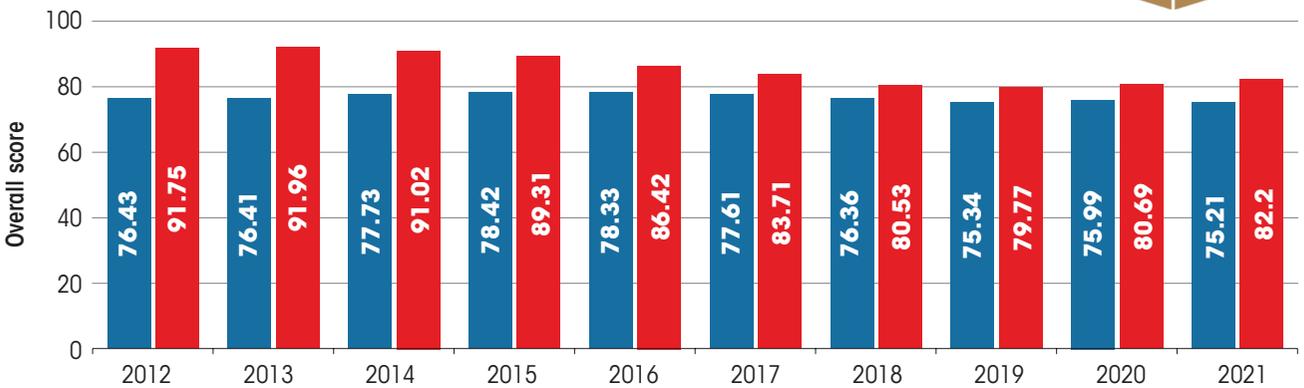

Goal 3: Natural products

The natural resources that are sustainably extracted from living marine resources

■ Global average ■ India average

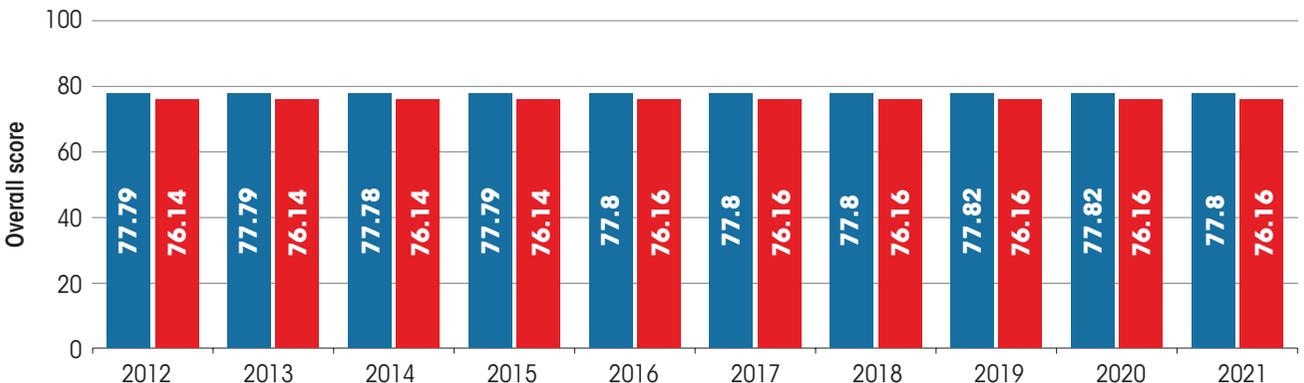

Goal 4: Carbon storage

The condition of coastal habitats that store and sequester atmospheric carbon

■ Global average ■ India average

Source: Ocean Health Index, 2021

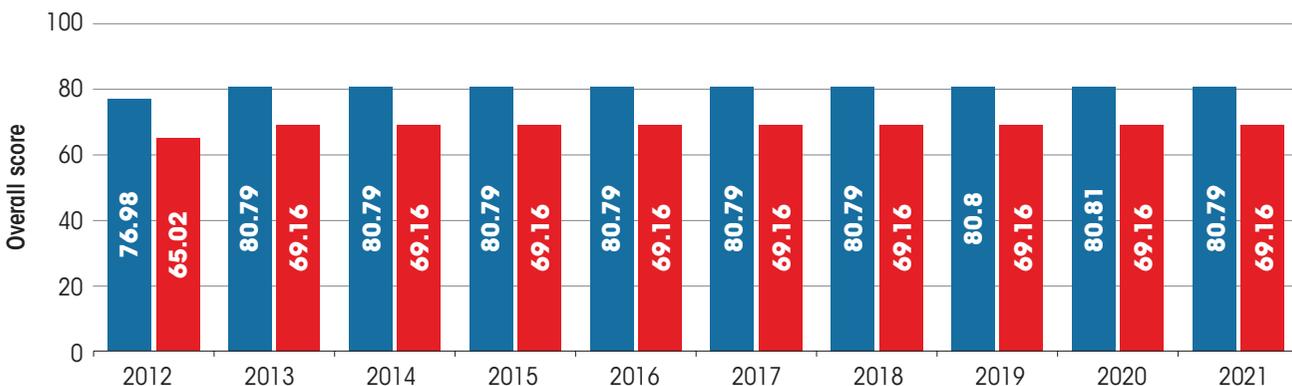

STATE OF OCEANS

Goal 5: Livelihoods and economies

Coastal and ocean-dependent livelihoods and economies (revenues) produced by marine sectors

■ Global average ■ India average

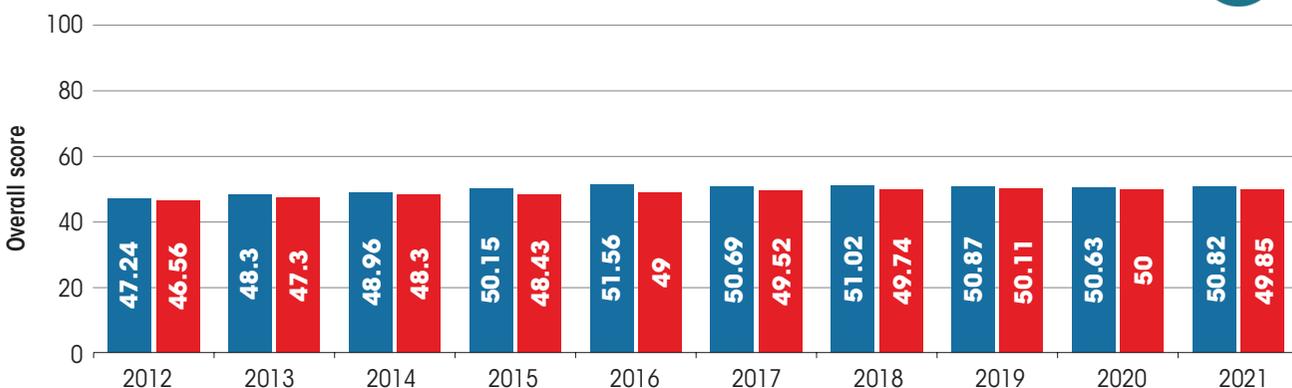

Goal 6: Tourism and recreation

Value people have for experiencing and enjoying coastal areas through activities such as sailing, beach-going

■ Global average ■ India average

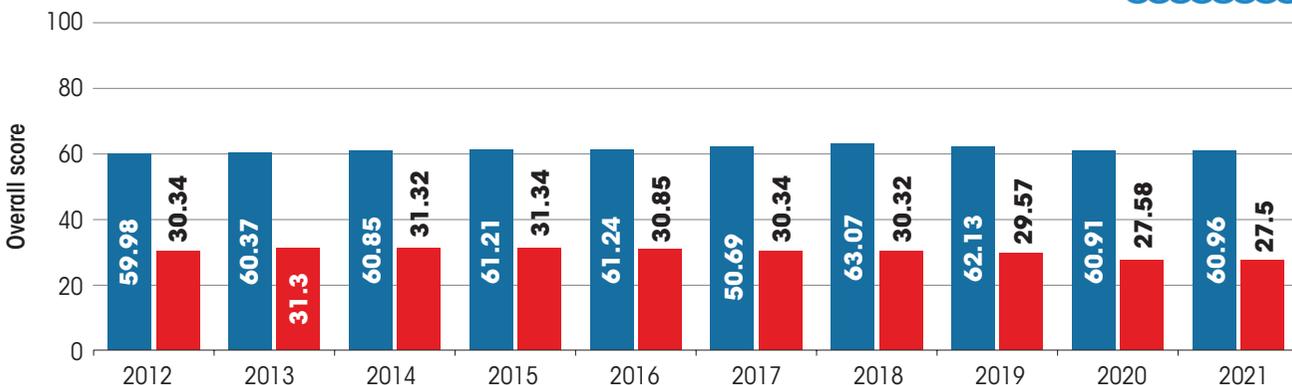

Goal 7: Sense of place

Conservation status of iconic species (such as salmon) and locations that contribute to cultural identity

■ Global average ■ India average

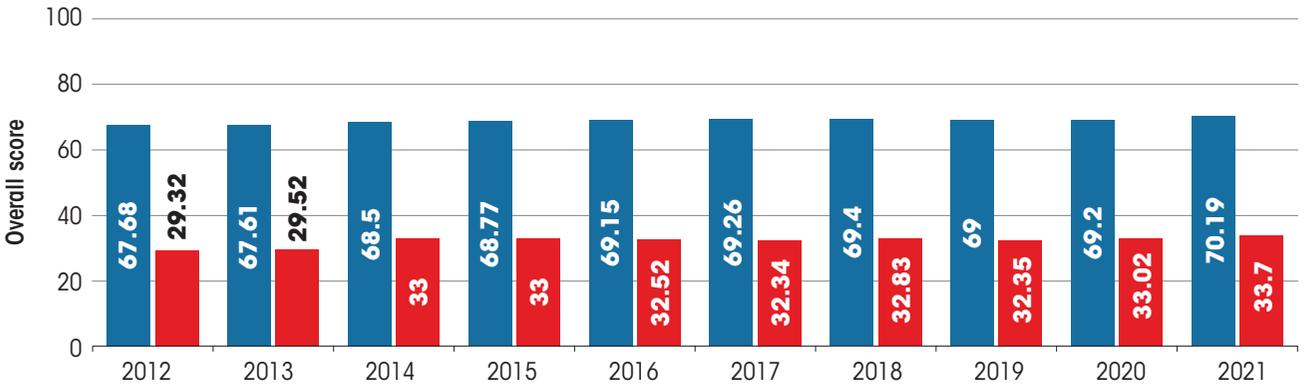

Source: Ocean Health Index, 2021

Goal 8: Clean waters

The degree to which ocean regions are free of contaminants such as chemicals, eutrophication and trash

■ Global average ■ India average

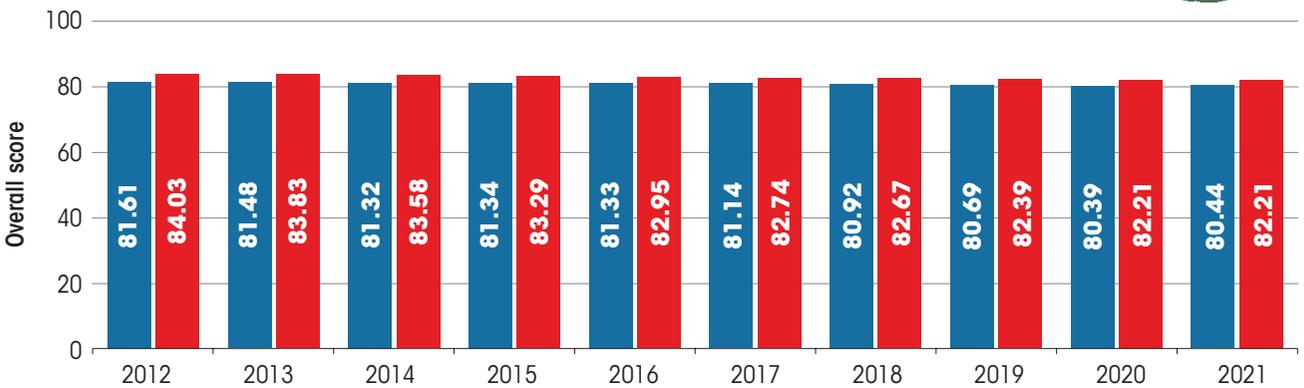

Goal 9: Biodiversity

Status of native species and key habitats that serve as a proxy for the suite of species that depend upon them

■ Global average ■ India average

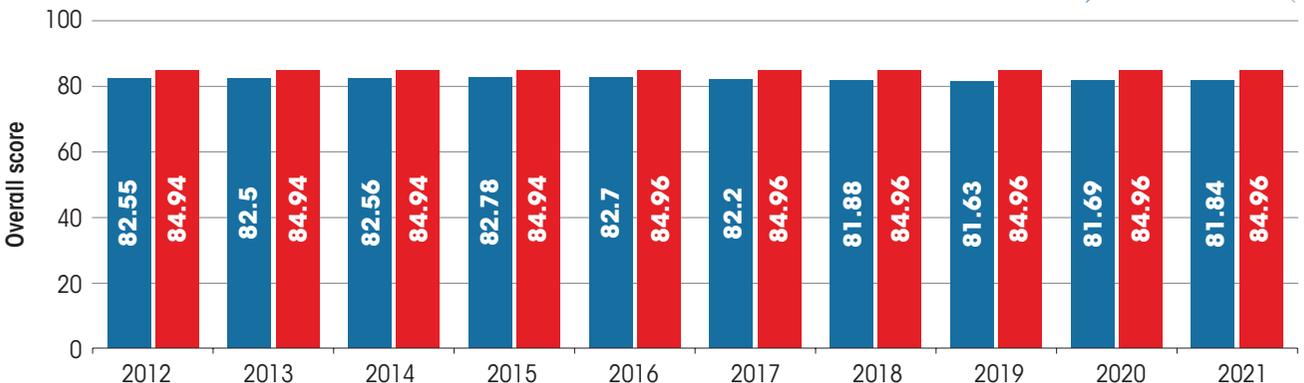

Goal 10: Coastal protection

Amount of protection provided by marine and coastal habitats serving as natural buffers against waves

■ Global average ■ India average

STATE OF BIODIVERSITY

FOREST COVER

India's forest cover has shrunk in 244 out of 638 assessed districts across 27 states and five UTs between 2019 and 2021

CLIMATE HOTSPOTS

By 2030, 45 to 64% of India's forest cover is likely to become a climate hotspot

WILDLIFE POACHING

In the first three months of 2022, at least 73 wild animals have been poached

FOREST COVER

India's total forest cover has registered a little more than 0.5% increase between 2017 and 2021. But the seemingly good news has a caveat. The bulk of the increase has taken place in the open forest category, which includes commercial plantations. This has happened at the cost of moderately dense forest, which is normally the area closest to human habitations. At the same time, very dense forests, which absorb maximum carbon dioxide from the atmosphere, occupy just 3% of total forest cover

CATEGORIES

713,789 km² or 21.71% of geographical area is under forests

Very dense forest:

All lands with tree canopy density of 70% and above

Moderately dense forest

All lands with tree canopy density of 40% and more but less than 70%

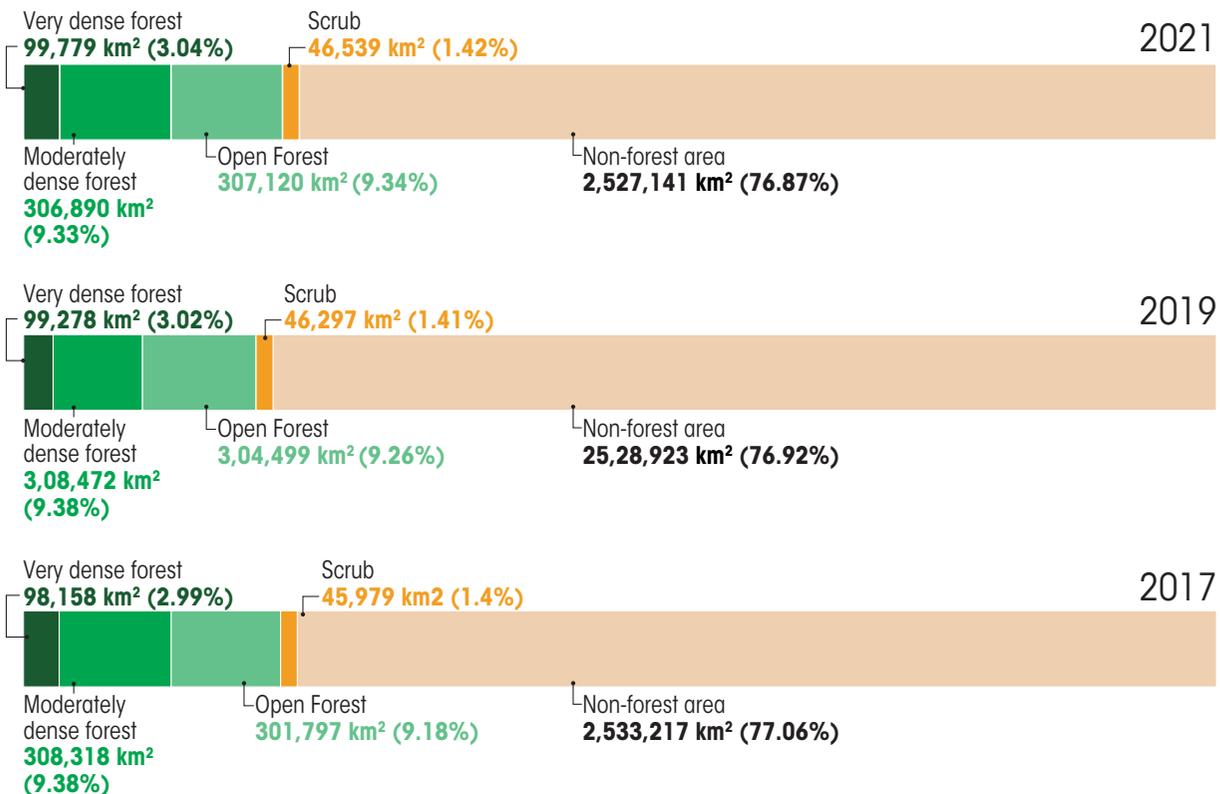

Open forest

All lands with tree canopy density of 10% and more but less than 40%

Scrub

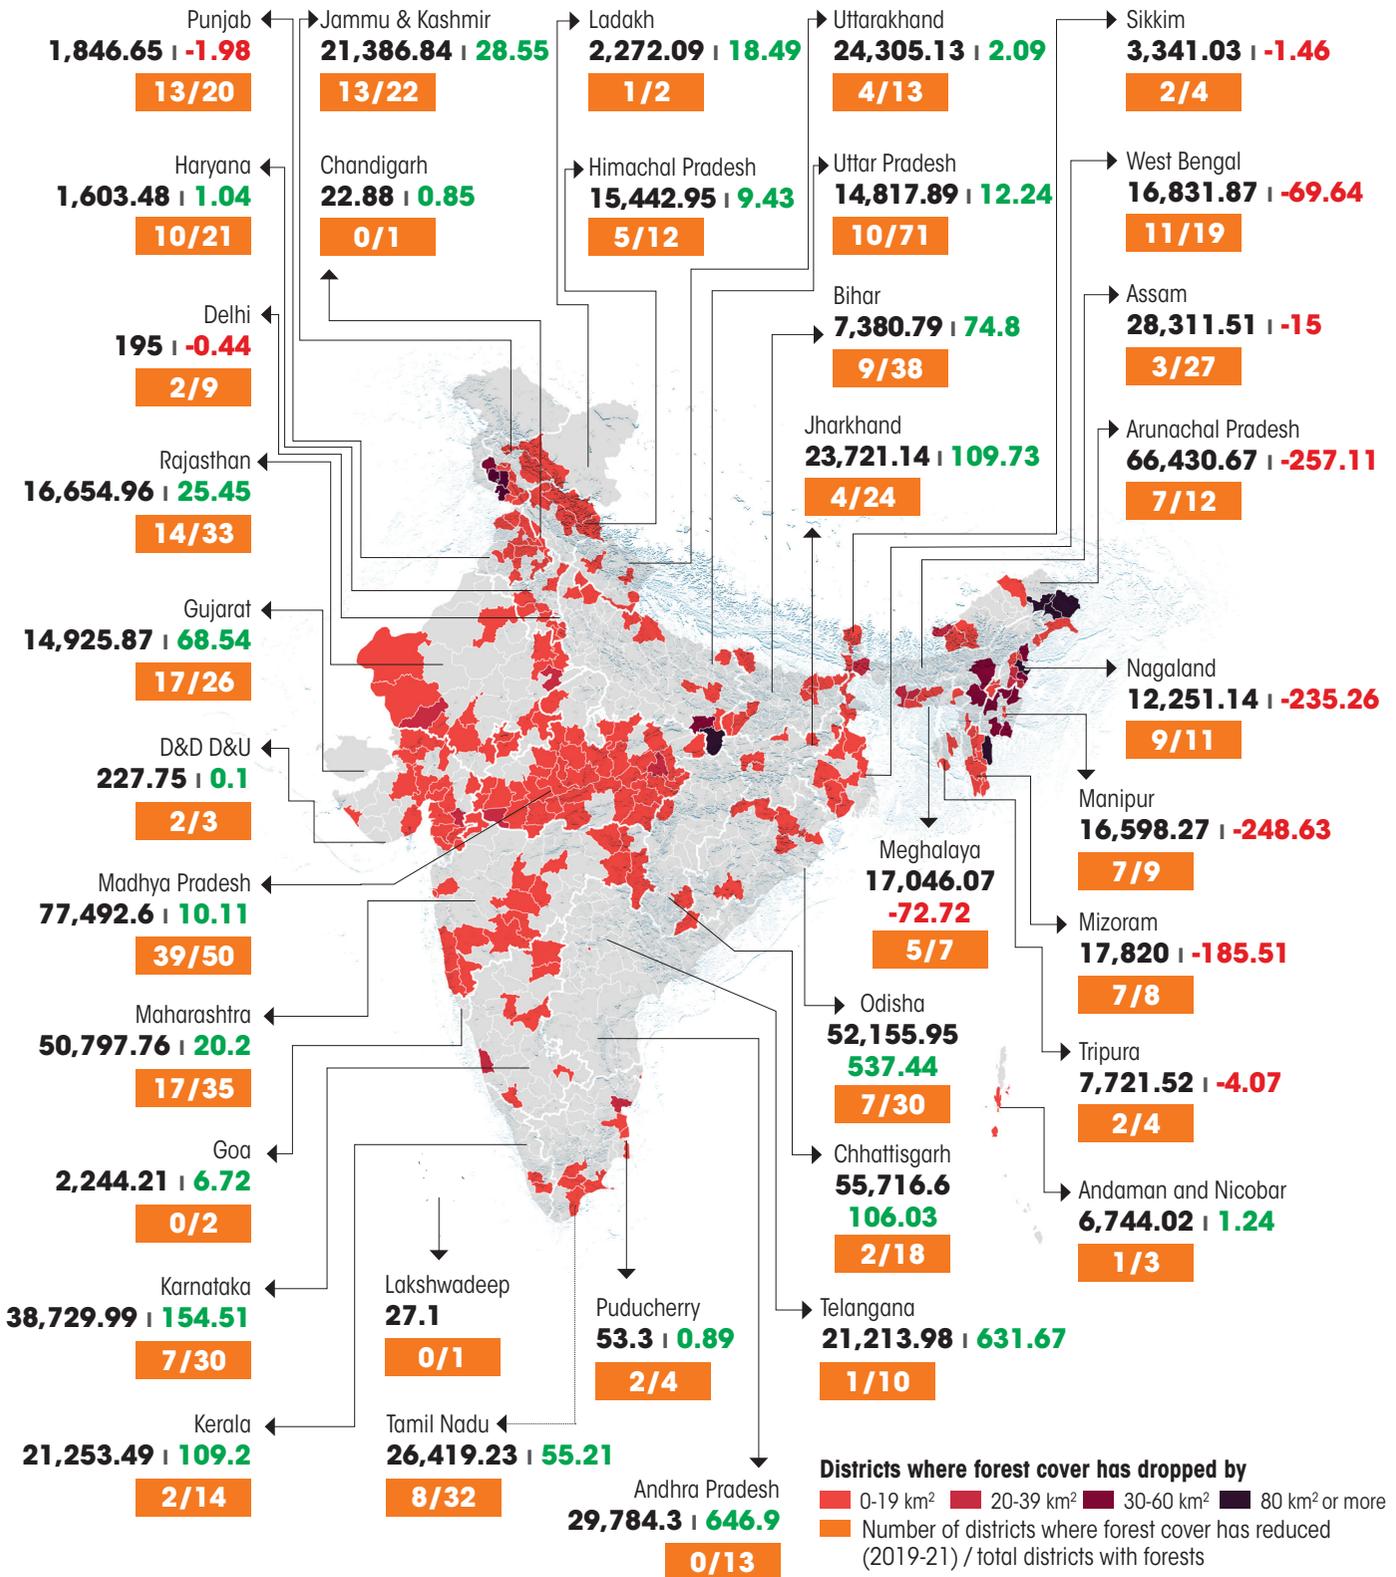

Degraded forest lands with canopy density less than 10%

Source: [India State of Forest Report 2021, Ministry of Environment, Forest and Climate Change](#)

A DOWNWARD TREND

Forest cover in 244 out of 638 assessed districts across 27 states and five UTs has shrunk. The districts have a combined forest cover of 325,274 km², which is almost 46% of India's forests

Districts where forest cover has dropped by

- 0-19 km² (Light Red)
- 20-39 km² (Medium Red)
- 30-60 km² (Dark Red)
- 80 km² or more (Black)

Number of districts where forest cover has reduced (2019-21) / total districts with forests

00 Forest area in 2021 in km²

00/00 Decrease or increase in forest area over from 2019

MISSING FORESTS

India has a forest cover of 77.53 million ha. But recorded forests—the area under the forest department— with forest cover are only 51.66 million. This gap of 25.87 million ha—a size bigger than Uttar Pradesh— remains unaccounted

77.53 million hectares (ha) is the recorded forest area of the country

29.32 million ha is the area covered by forest and trees outside recorded forest area

12% of the very dense category of forests is outside recorded areas

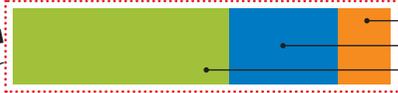

PAPER FORESTS

A massive 25.87 million ha forests, or one-third of India's recorded forest area, has not been assessed in the government's latest survey

CLIMATE HOTSPOTS

By 2030, 45 to 64% of India's forest cover is likely to become a climate hotspot. Almost the entire forest cover of the country is likely to become a climate hotspot by 2050. The severity, in terms of damage due to climate change, is set to increase in 2085

A hotspot refers to an area that is likely to face severe impacts of climate change. To understand the impact of climate change on Indian forests, the projected change in hotspot areas has been identified for 2030 (short-term), 2050 (mid-term) and 2085 (long-term) under two scenarios: RCP 4.5 (moderate emissions scenario) and 8.5 (highest emissions scenario), which are projections of greenhouse gas concentration trajectories adopted by the UN IPCC

Identifying climate change hotspots in Indian forests

A hotspot is identified on the basis of projected temperature rise and precipitation change in a forest due to climate change. A **temperature hotspot** has been defined as any forested grid that is projected to experience a temperature rise over 1.5°C by 2100 compared to 1860-1900 scenario. A **precipitation hotspot** refers to the change of rainfall greater or less than 20% with respect to the 1860-1990 scenario. Thereafter, a **composite score** combining the temperature and precipitation variables were computed assigning 75% weightage to temperature and 25% to precipitation and classified into:

High 0.75 to 3

Forests in this category will see temperature rise of 1.5-2.1°C (compared to 1860-1900) and precipitation change of 20-26%, compared to 1960-1990

Very High 3 to 4.25

Forests in this category will see temperature rise of 2.1-3.3 °C and precipitation change of 26-32%

Extremely High 4.25 to 6.75

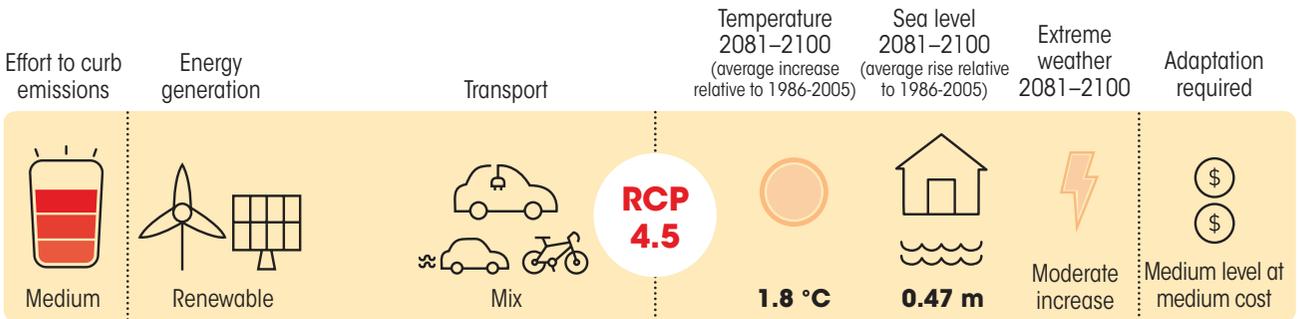

Forests in this category will see temperature rise of 3.3-5.1°C and precipitation change of 32-38%

Critical 6.75 to 8.75

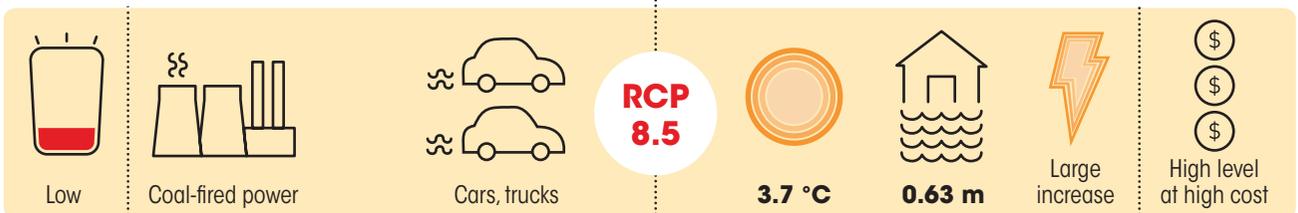

Forests in this category will see temperature rise of 5.1-6.6 °C and precipitation change of 38-41%

The four categories have been further sub-divided into 10 classes depending on their severity

In RCP 4.5 scenario, the global temperature would increase by 1.8°C by 2100, compared to 1986-2005. In RCP 8.5, the temperature increase will be 3.7°C

Current emissions are tracking close to the RCP8.5 pathway

Source: India State of Forest Report 2021, Ministry of Environment, Forest and Climate Change and Coastadap

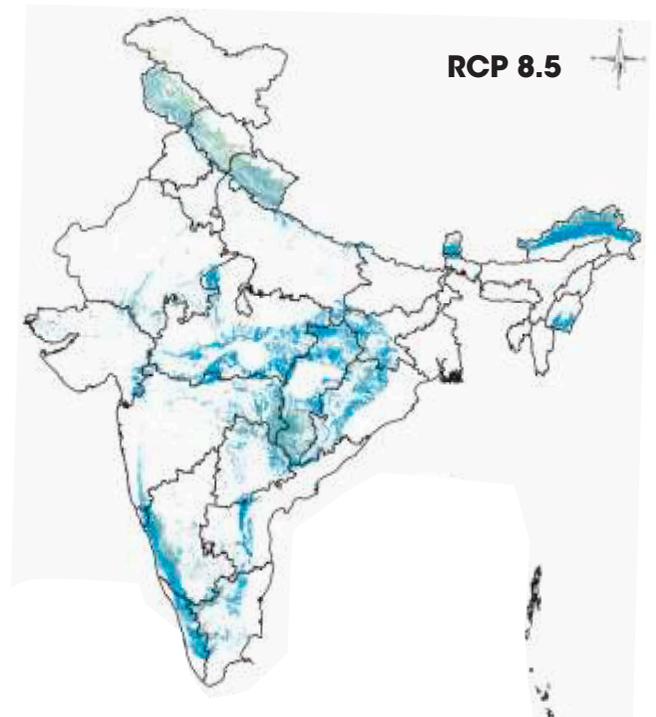

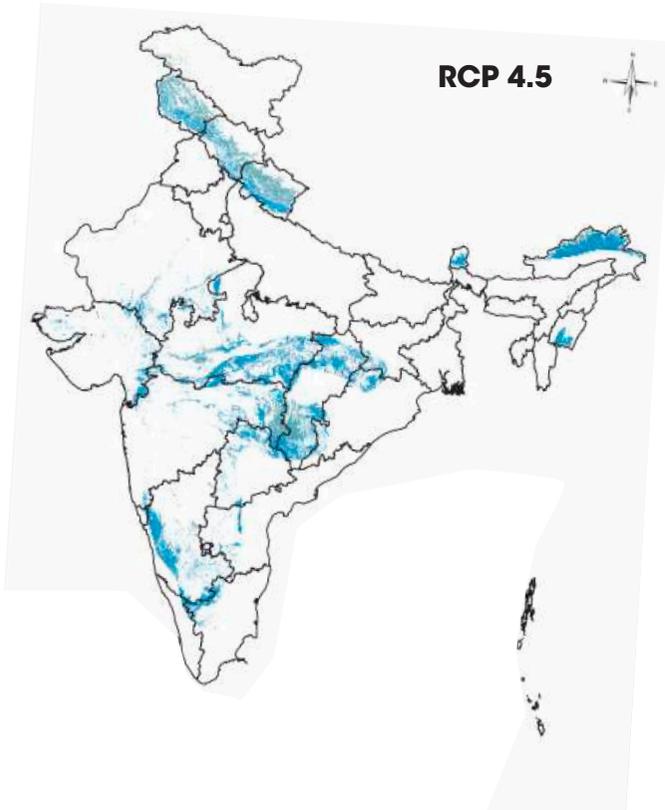

By 2030

- Under RCP 4.5 scenario, about 315,667 km² of forest cover will fall under climate hotspots, while under RCP 8.5 scenario, about 449,919 sq km of forest cover will fall under the same. These occupy almost 45% and 64% of India's forest cover respectively
- Under both RCP 4.5 and RCP 8.5 scenarios, almost all the states, except Assam, Meghalaya, Nagaland and Tripura, are coming under "High" category
- Some parts of Ladakh is coming under "Very High" category of climate hotspot

BY 2050

- Under RCP 4.5 scenario, about 367,334 km², 330,602 km² and 6,899 km² of forest cover will fall under "High", "Very High" and "Extremely High" severity classes of climate hotspots respectively, thereby covering 52%, 47% and 1% area of the same
- Under RCP 8.5 scenario, about 260,883 km², 343,726 km² and 100,569 km² of forest cover will fall under "High", "Very High" and "Extremely High" severity classes of climate hotspots respectively, thereby covering 37%, 49% and 14% area of the same
- By 2050, entire forest cover of the country is projected to be under climate change hotspots with varying severity classes
- Under RCP 8.5 scenario, 14% of India's forests come under "Extremely High" severity class. No climate hotspots are falling under "Critical" hotspot severity class by 2050

BY 2085

- Under RCP 4.5 scenario, about 11,804 km², 656,094 km² and 37,196 km² are falling under "High", "Very High" and "Extremely High" severity classes of climate hotspots respectively, thereby covering 2%, 93% and 5% area of the same. Over a period of 35 years, between 2050 to 2085, there is a rise of 4% in "Extremely High" severity class
- Under RCP 8.5 scenario, about 566,442 km² (80%) and 138,736 sq km (20%) of forest cover will fall under "Extremely High" and "Critical" severity classes respectively. This implies that by 2085, the RCP 8.5 model shows that 20% of Indian forests may experience catastrophic changes due to adverse impact of climate change
- The "Critical" hotspots have been observed mainly in the Western Himalayas and Karakoram ranges across Jammu Kashmir, Himachal Pradesh and Uttarakhand. Some "Critical" hotspots are also identified in northeastern states

Source: India State of Forest Report 2021, Ministry of Environment, Forest and Climate Change

Wildlife crimes

India has lost at least 826 wild animals to poaching between January 2019 and March 2022. At least 76 of them have been poached in the first three months of 2022

Elephant poaching and ivory seizures

India has lost at least 71 wild elephants to poaching in the past four years

Year	Poaching	Articles seized
2019	26	120.63 kg ivory, 55 tusks, 33 ivory pieces, 7 ivory carvings, 14 ivory idols, 3 ivory vessels, 1 ivory comb, 4 packets of ivory powder and 5 elephant jaws
2020	23	160.74 kg ivory, 40 tusks, 7 ivory pieces, 1 ivory bracelet, 3 elephant teeth and 1 live elephant
2021	16	351.26 kg ivory, 42 tusks, 4 ivory pieces, 5 ivory statues, 1 ivory stick, 25 ivory articles, 12 ivory bangles, bones and 7 live elephants
2022 (January–March)	6	96.585 kg ivory, 4 tusks, 2 tushes, 5 ivory pieces, 9 ivory articles, 2 ivory statues, 1 tooth and 1 ankle bone

Tiger poaching and mortality

India has lost at least 137 tigers to poaching in the past four years

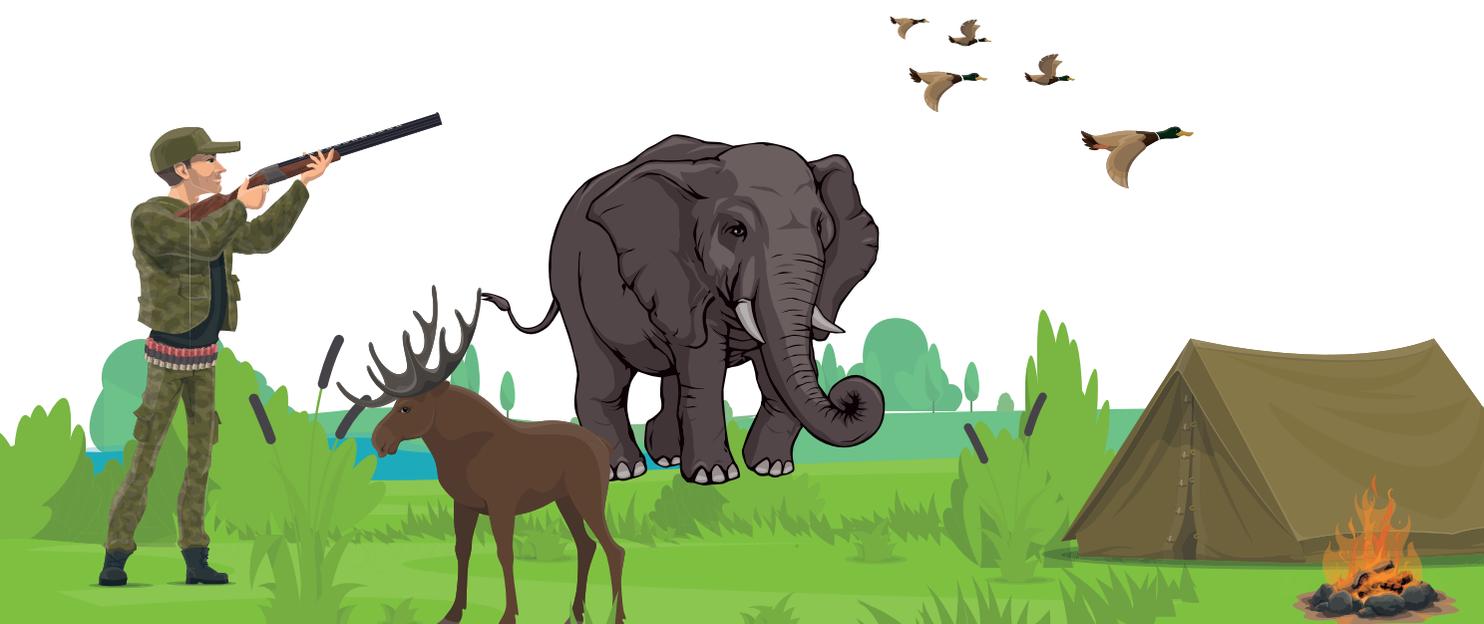

Year	Poaching & Seizure Cases	Total Tiger Mortality
2019	38	113
2020	31	111
2021	56	171
2022 (January–March)	12	43

Leopard poaching, mortality

India has lost at least 536 leopards to poaching in the past four years

Year	Poaching & Seizure Cases	Total Leopard Mortality
2019	129	494
2020	168	667
2021	182	614
2022 (January–March)	57	172

Asian one-horned rhinoceros poaching and seizures

India has lost at least 11 rhinoceros to poaching in the past four years

Year	Poaching	Articles seized
2019	5	2 suspected horns, 1 horn piece
2020	2	4 horns, 3 suspected horns
2021	3	3 horns, 3 suspected horns
2022 (January–March)	1	1 horn

Pangolin

India has lost at least 7 pangolin to poaching in the past four years

Year	Poaching	Articles seized
2019	-	145.4kg scales, 30 pieces of scales, unspecified quantity of scales in 5 cases, 42 live pangolins, 1 dead pangolin
2020	5	104.135 kg scales, 404 pieces of scales, unspecified quantity of scales (approximately 3 pangolin's scales) in 3 cases, unspecified quantity of meat in 2 cases, 41 live pangolins and 3 dead pangolins
2021	2	316.18 kg scales, 268 pieces of scales, 1 scale's ring, 9 pangolin skins, 62 pangolin claws and 55 live pangolins
2022 (January–March)	-	101.24 kg scales and 14 live pangolins

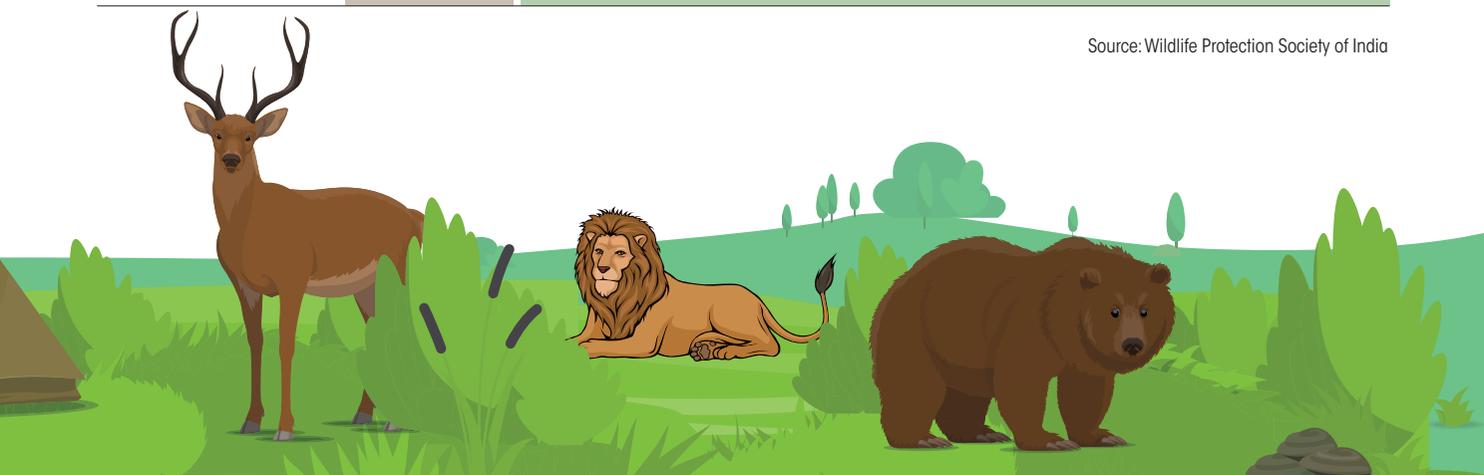

Turtles and tortoises

India has lost at least 64 turtles and tortoises to poaching in the past four years

Year	Poaching	Seizure
2019	2	17,137 live turtles, 4,000 kg live turtles, 91 dead turtles, 3 kg meat, 1.025 kg shells, 21 carapaces and 39 pieces calipees
2020	43	13,575 live turtles, 217 dead turtles, 120 kg meat, 4 carapaces and 40 kg calipees
1 Jan – 31 Dec 2021	19	15,449 live turtles, 15 dead turtles, 9 carapaces, 80 kg calipees and 576 pieces of calipees
1 Jan – 31 Mar 2022	-	8,176 live turtles, 1 carapace and 15 kg calipees

STATE OF LAND

DEGRADATION

Over 3 million hectare additional land degraded between 2003-05 and 2018-19

MICRO-NUTRIENT DEFICIENCY

Of the 414 districts, 312 had soil samples with deficient iron levels, and 339 had samples with deficient potassium

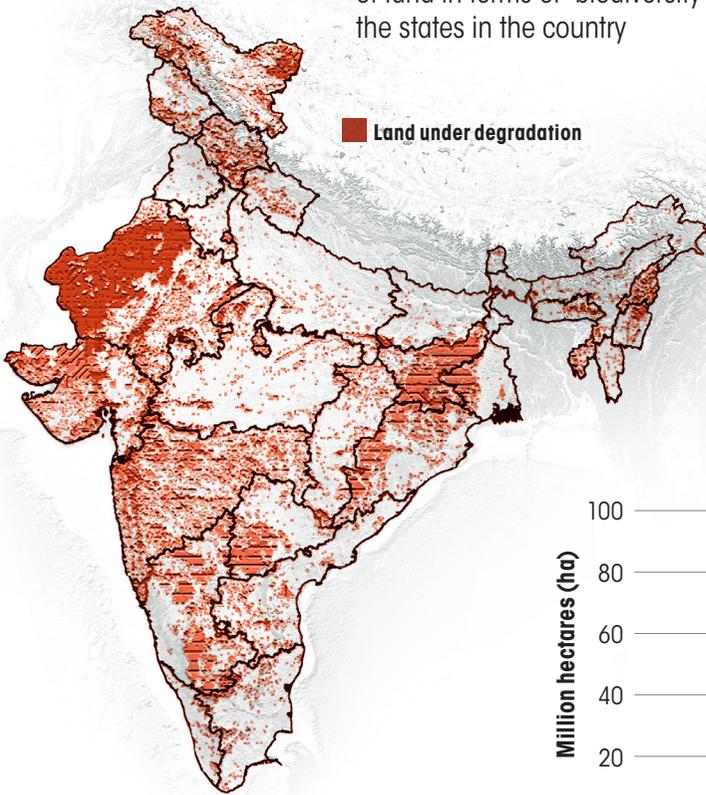

MACRO-NUTRIENT DEFICIENCY

About 96% of the soil samples tested were deficient in available nitrogen

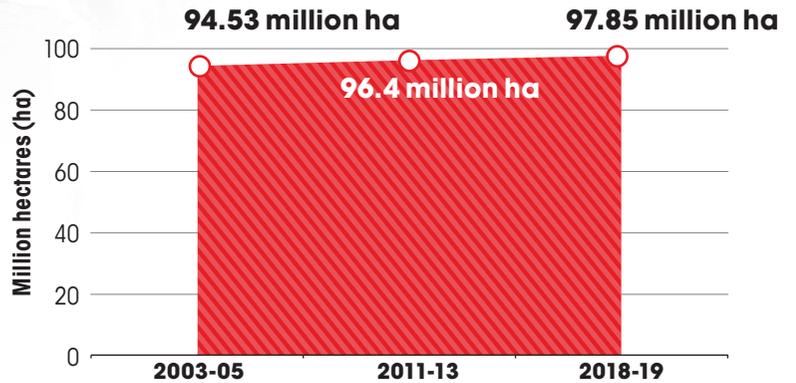

Degradation

India has almost 30% of its geographical area under degradation. It is triggered by various factors including climate and human induced factors

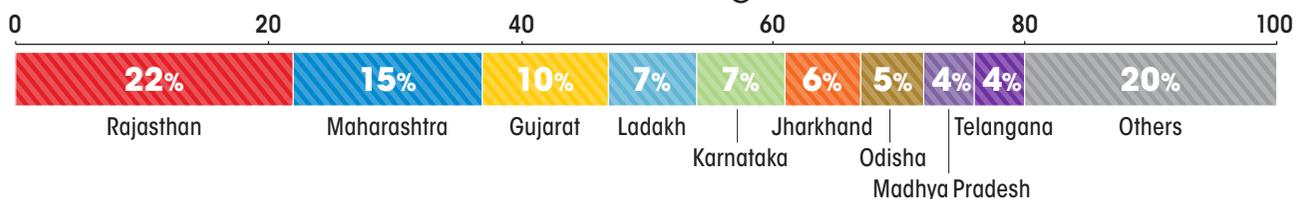

Land degradation, defined as decline in productivity of land in terms of biodiversity and economy ails all the states in the country

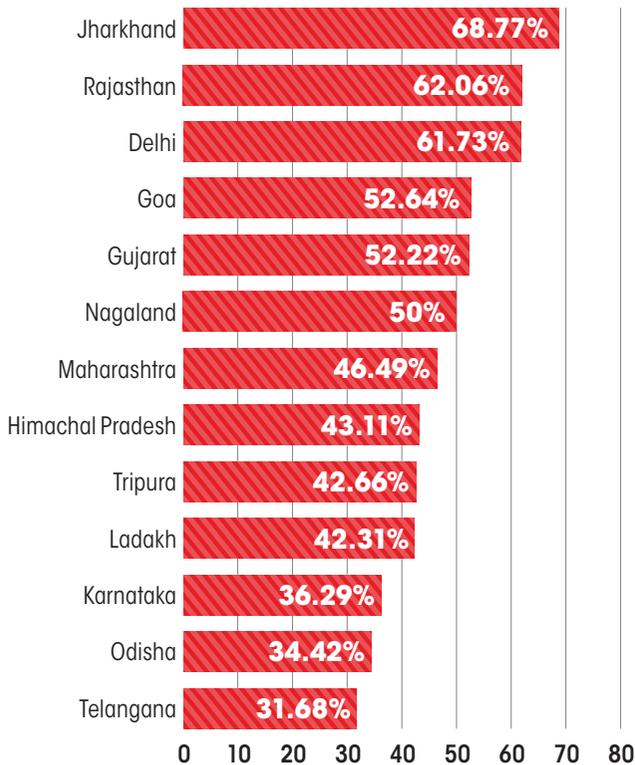

Over **3 million hectare** additional land degraded between 2003-05 and 2018-19

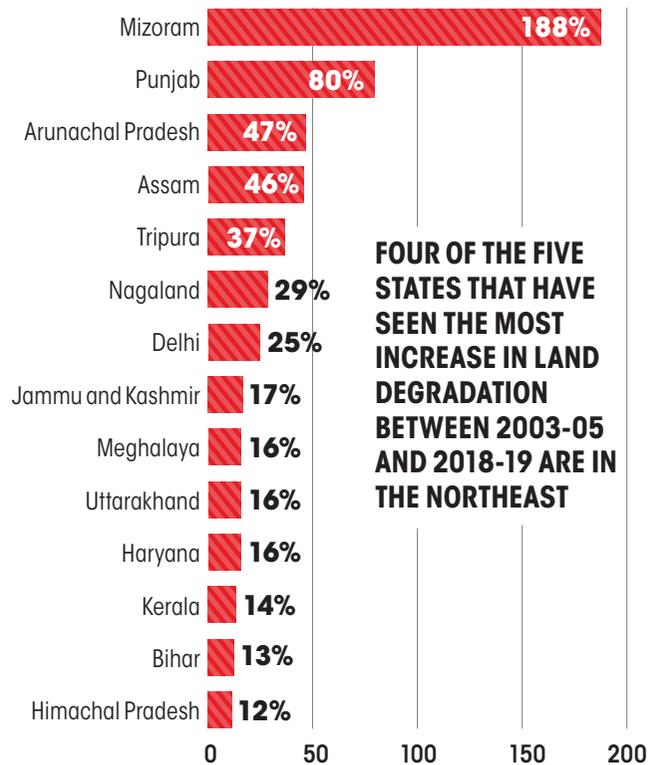

Nine states account for 80% of the degraded land

13 states have over 30% of their land under degradation

14 states have seen over 10% rise in the share of degraded land between 2003-05 and 2018-19

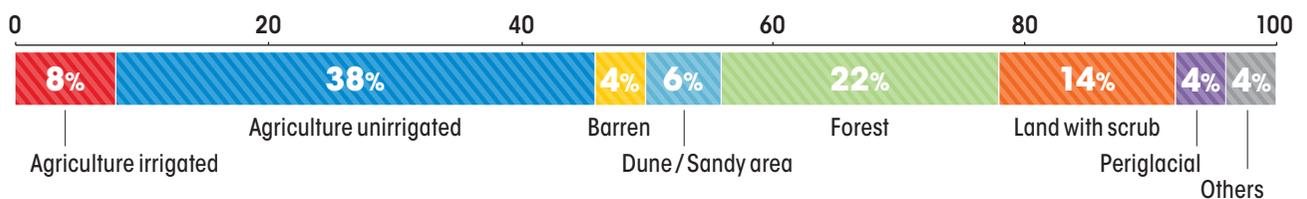

FOUR OF THE FIVE STATES THAT HAVE SEEN THE MOST INCREASE IN LAND DEGRADATION BETWEEN 2003-05 AND 2018-19 ARE IN THE NORTHEAST

Source: Desertification and Land Degradation Atlas of India, Space Applications Centre, Indian Space Research Organisation

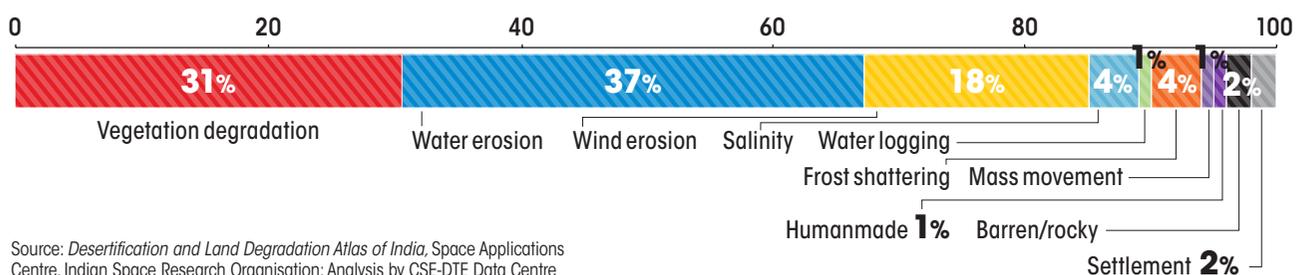

What kind of land is undergoing degradation

Unirrigated farmland and forests account for 60% of land degradation

What is causing degradation

Almost 70% of land degradation is caused by water erosion and vegetation degradation

Source: Desertification and Land Degradation Atlas of India, Space Applications Centre, Indian Space Research Organisation; Analysis by CSE-DTE Data Centre

Soil quality

India tested over 30 million soil samples between 2017-18 and 2018-19 and found severe and widespread deficiency of macro- and micro-nutrients. About 96% of the samples were deficient in available nitrogen; 61% samples were deficient in phosphorus; and 62% samples were deficient in potassium. About 26%, 34%, 13%, 31%, 5% and 23% soil samples were deficient in sulphur, zinc, manganese, iron, copper and boron respectively. While nutrient deficiencies can pose serious threats to plant productivity, nutrients can become toxic in excess

NITROGEN

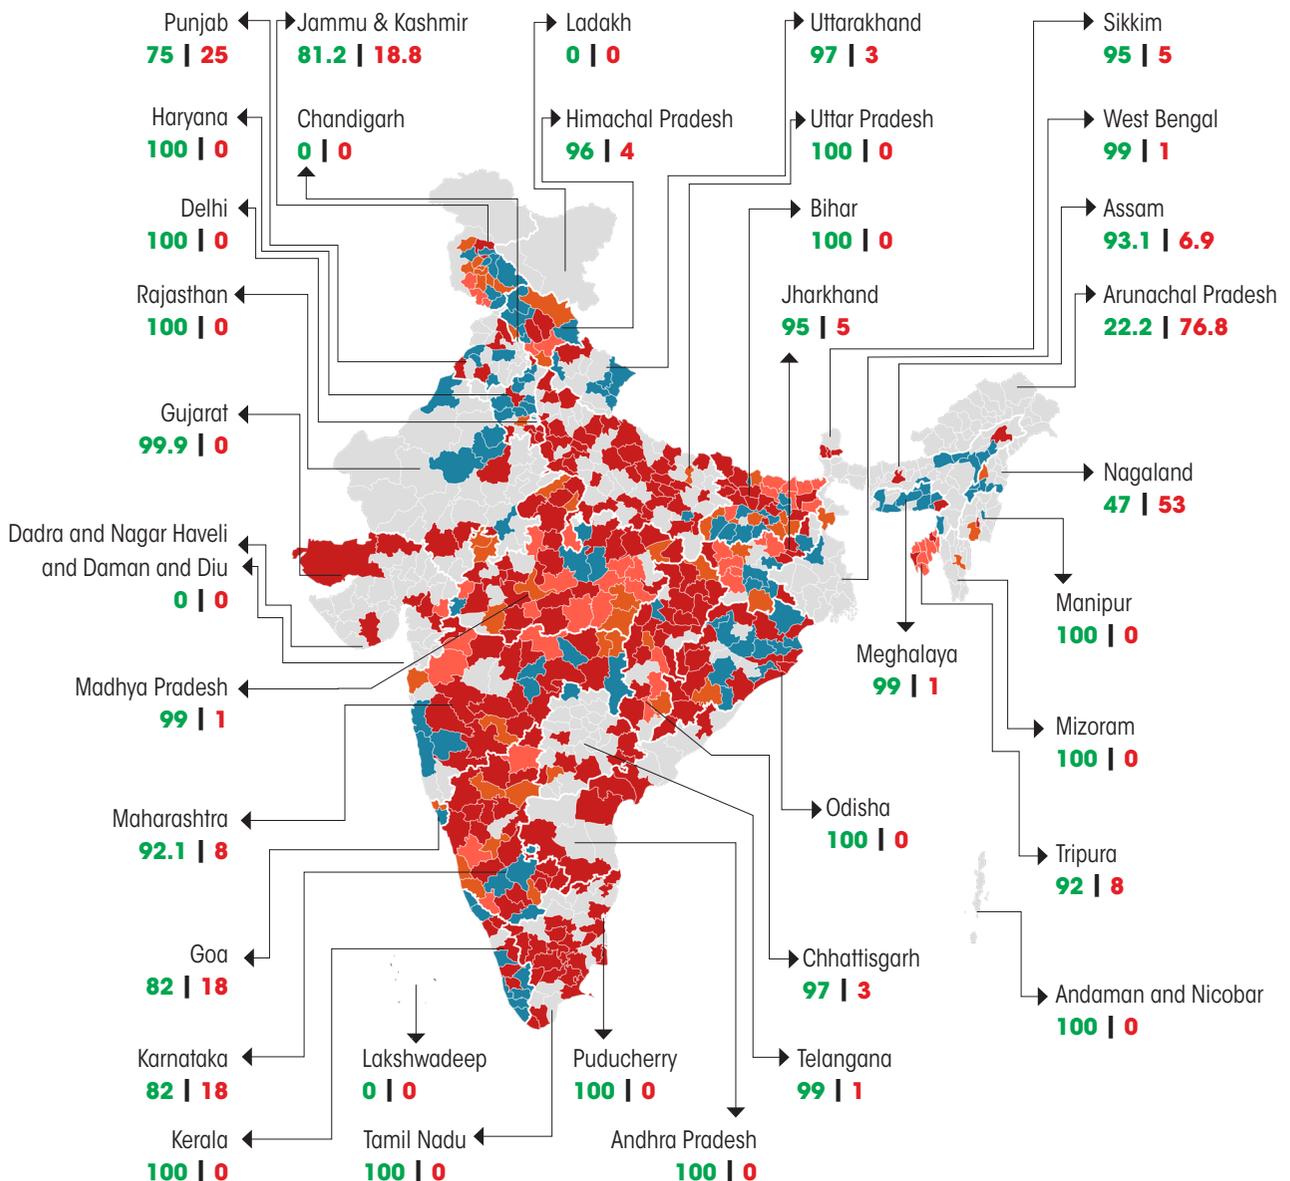

Of the 428 districts, 360 had soil samples with deficient levels of nitrogen, the macronutrient that helps plants in energy metabolism and protein synthesis. In 274 districts, at least half of the samples were deficient

District-wise share of nitrogen-deficient soil samples

75% or more 50-75% 25-50% 0-25%

State-wise % of soil samples with

00 sufficient zinc levels (high and very high levels)
00 deficient zinc levels (very low, low and medium levels)

Source: Soil Health Card dashboard, Ministry of Agriculture and Farmers Welfare, As on May 13, 2022

PHOSPHORUS

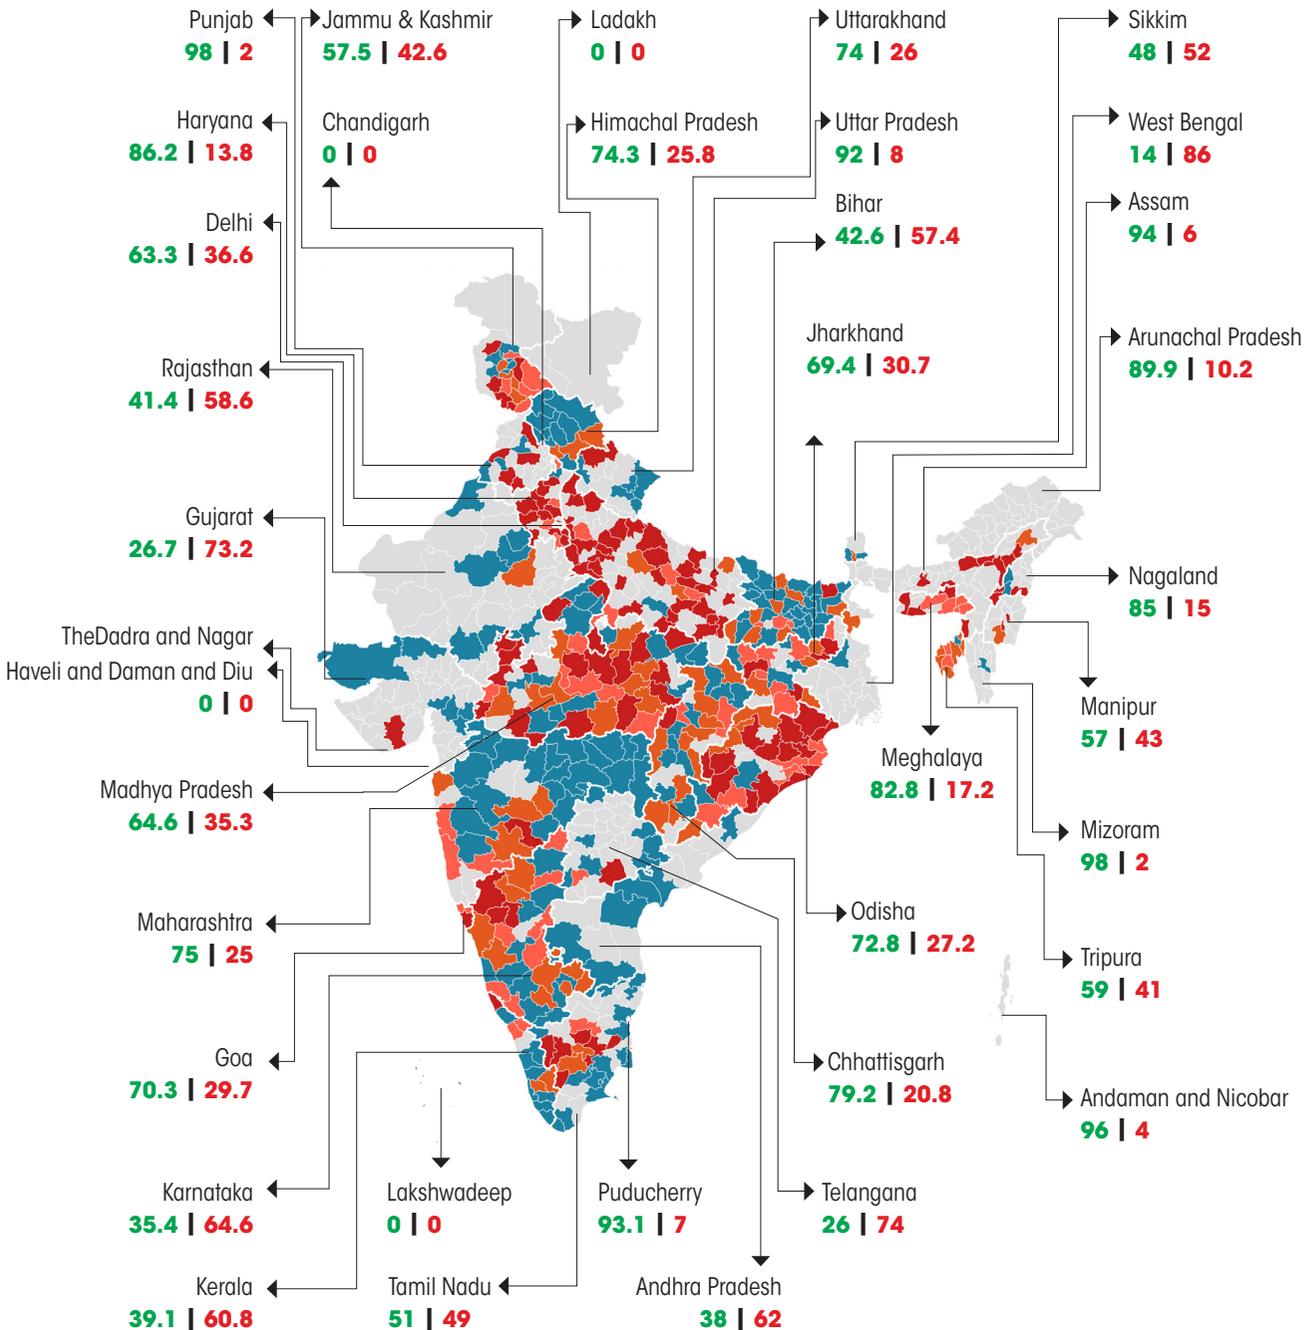

Of the 428 districts, 368 had soil samples with deficient levels of phosphorous, a macronutrient critical for the overall growth of plants. In 195 districts, at least half of the samples were deficient

District-wise share of phosphorus-deficient soil samples

75% or more 50-75% 25-50% 0-25%

State-wise % of soil samples with

00 sufficient phosphorus levels (high and very high levels)
00 deficient phosphorus levels (very low, low and medium levels)

Source: Soil Health Card dashboard, Ministry of Agriculture and Farmers Welfare, As on May 13, 2022

STATE OF LAND

POTASSIUM

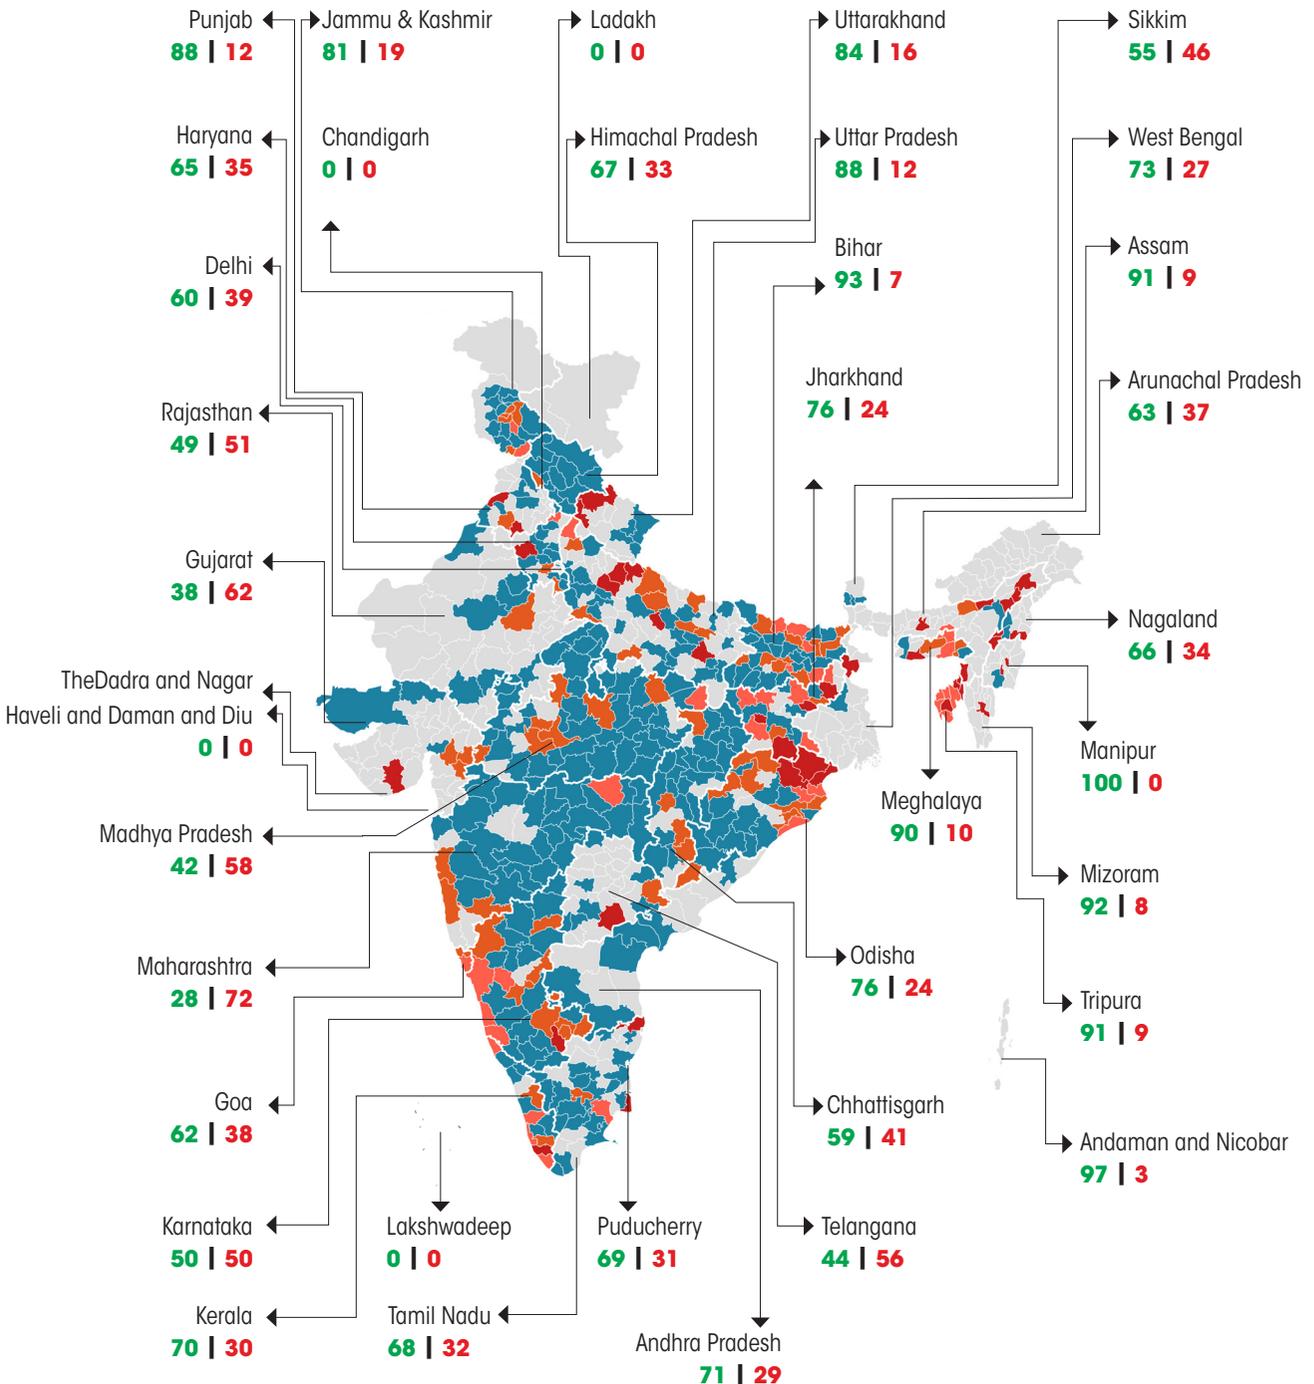

Of the 428 districts, 339 had soil samples with deficient levels of potassium, a macronutrient that enhances many enzyme actions aiding in photosynthesis and food formation. In 86 districts, at least half of the samples were deficient

District-wise share of potassium-deficient soil samples

75% or more 50-75% 25-50% 0-25%

State-wise % of soil samples with

00 sufficient potassium levels (high and very high levels)
00 deficient potassium levels (very low, low and medium levels)

Source: Soil Health Card dashboard, Ministry of Agriculture and Farmers Welfare, As on May 13, 2022

SULPHUR

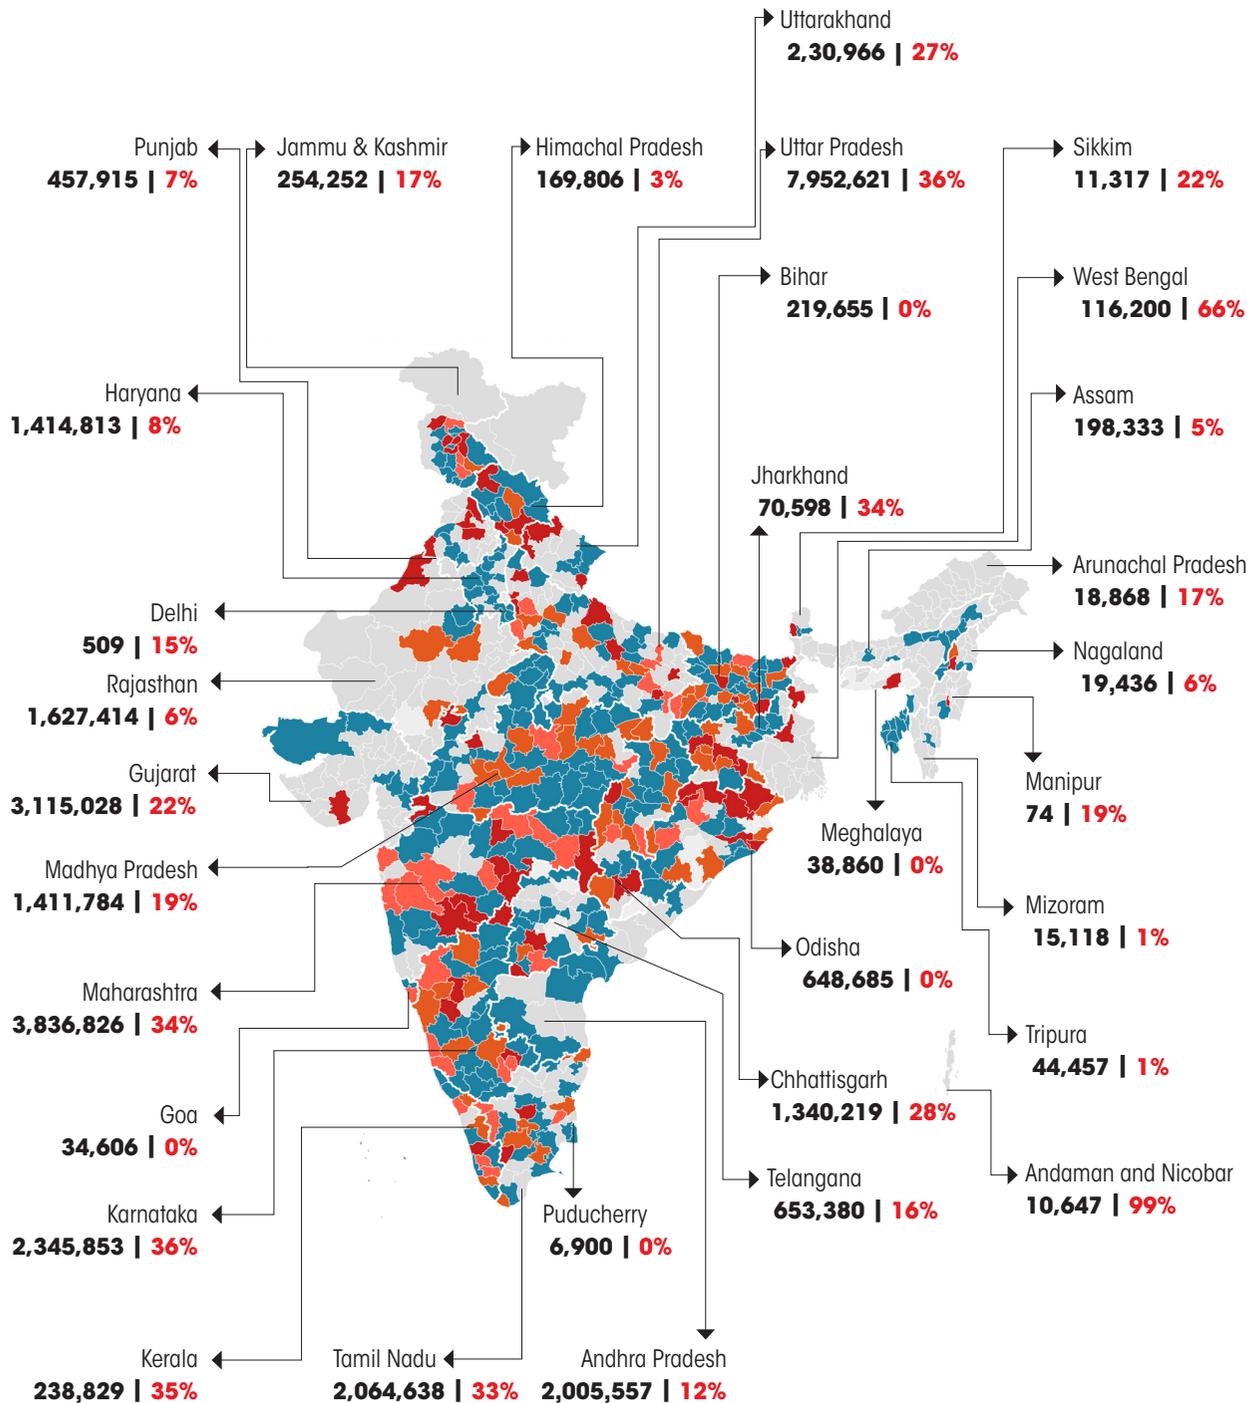

Of the 417 districts, 315 had soil samples with deficient levels of sulphur, which helps in nodule development and efficient nitrogen fixation in legumes. In 108 districts, at least half of the samples were deficient

District-wise share of sulphur-deficient soil samples

75% or more 50-75% 25-50% 0-25%

00 State-wise soil samples tested

00 % of samples with deficient sulphur levels

Source: Soil Health Card dashboard, Ministry of Agriculture and Farmers Welfare, As on May 13, 2022

STATE OF LAND

ZINC

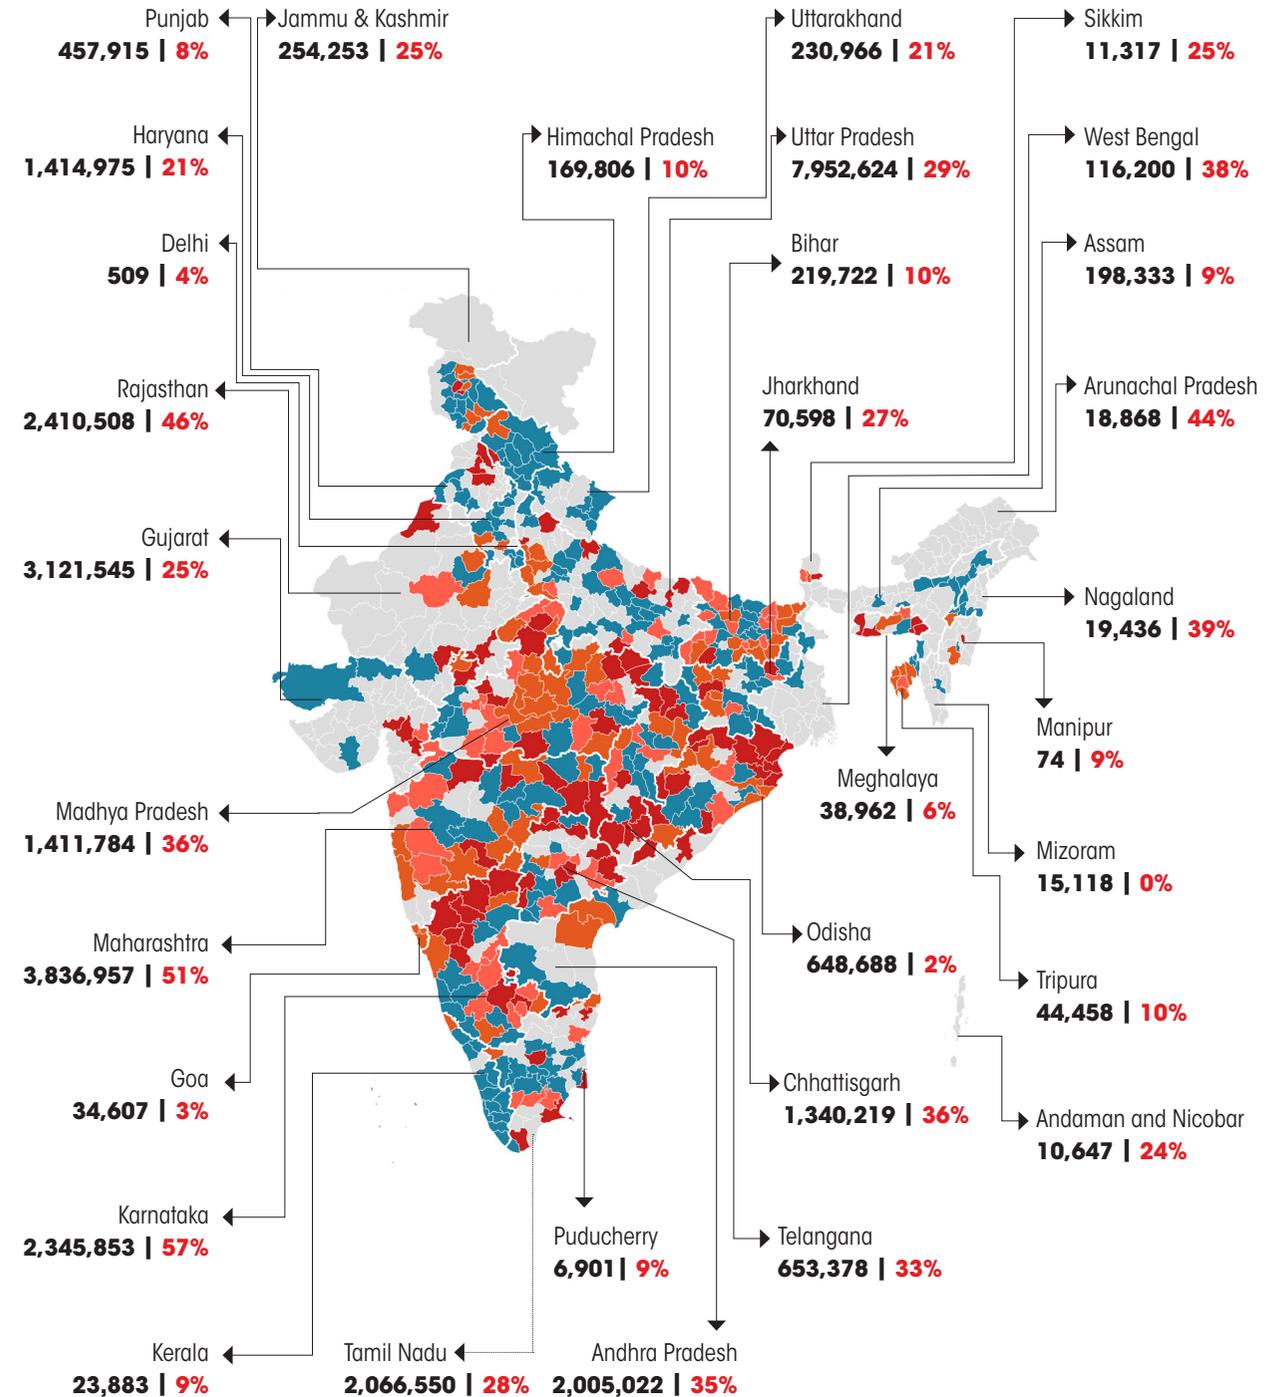

Of the 421 districts, 342 had soil samples with deficient levels of zinc, an essential micronutrient that helps in many metabolic reactions in plants. In 138 districts, at least half of the samples were deficient

District-wise share of zinc-deficient soil samples

75% or more 50-75% 25-50% 0-25%

State-wise soil samples tested

% of samples with deficient zinc levels

Source: Soil Health Card dashboard, Ministry of Agriculture and Farmers Welfare, As on May 13, 2022

MANGANESE

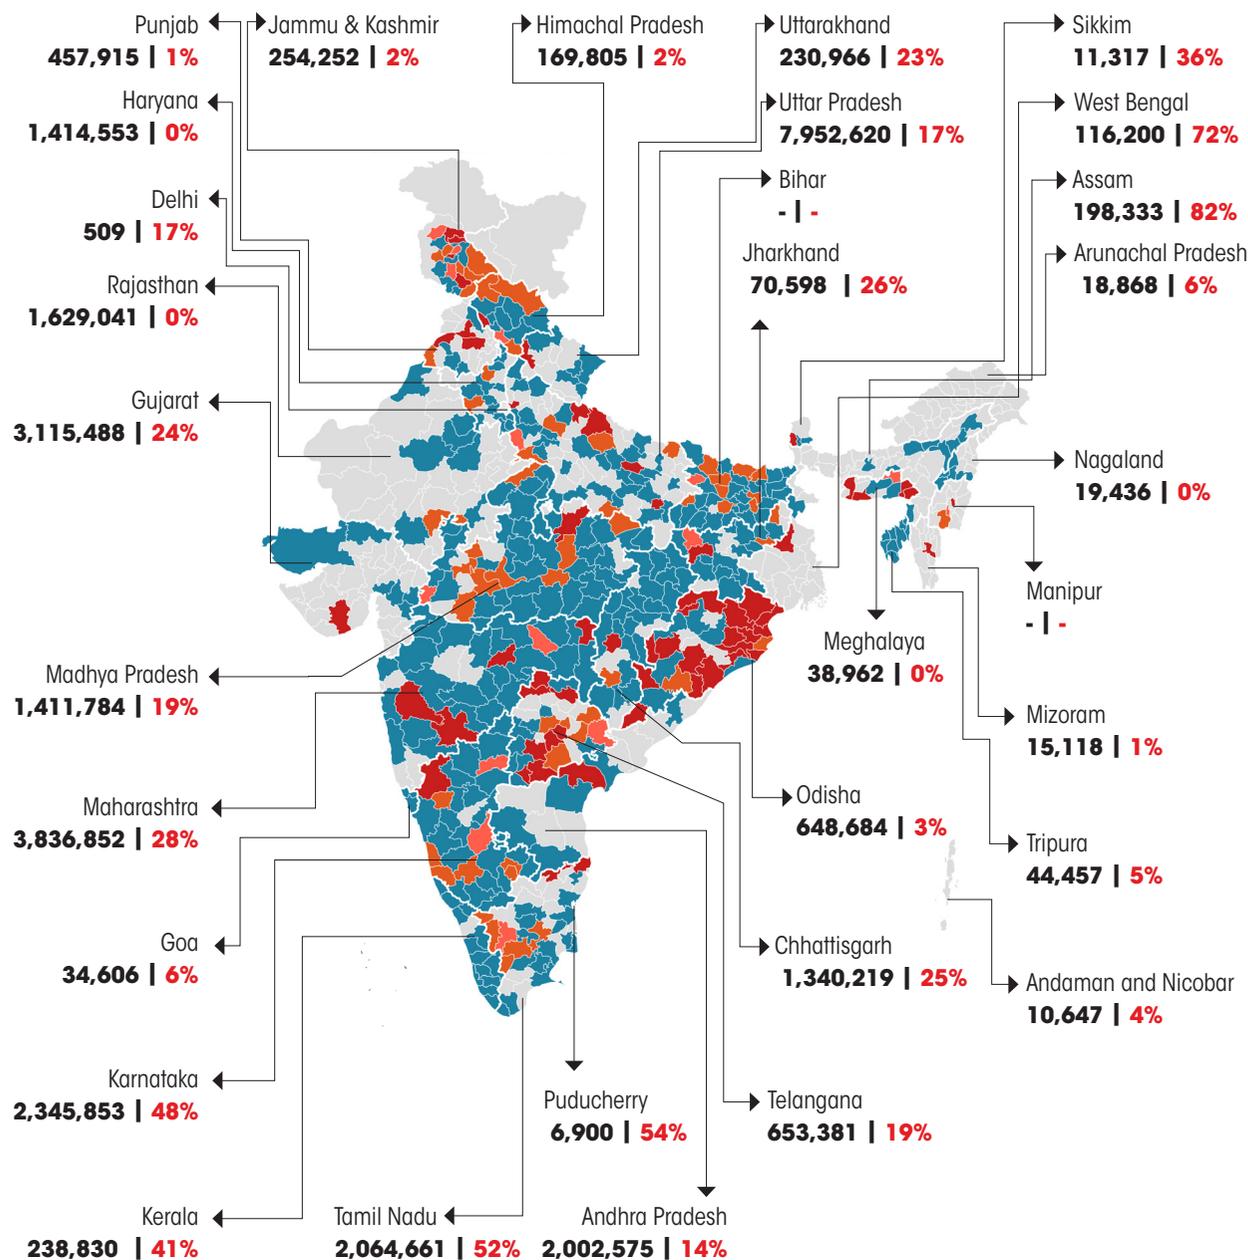

Of the 410 districts, 272 had soil samples with deficient levels of manganese, a micronutrient that sustains metabolic roles within different plant cell compartments. In 50 districts, at least half of the samples were deficient

District-wise share of manganese-deficient soil samples

75% or more 50-75% 25-50% 0-25%

State-wise soil samples tested

00 % of samples with deficient manganese levels

STATE OF AGRICULTURE

SHRINKING FARM HOUSEHOLDS

The share of agricultural households in rural areas has decreased by almost 4 percentage points between 2012-13 and 2018-19

UNDER DEBT

More than half of India's agricultural households are under debt, and on an average every household has a debt of ₹74,121

FARMER SUICIDES

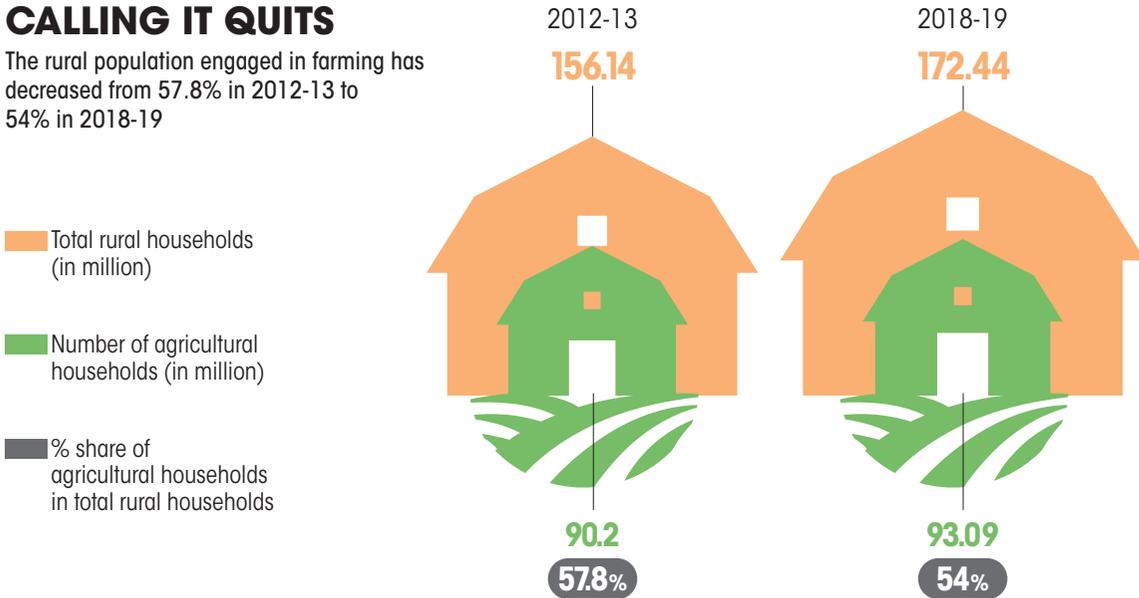

Over 29 farmers and farm labourers commit suicide in the country every day

FARM HOUSEHOLDS

The share of agricultural households in rural areas has decreased by almost 4 percentage points between 2012-13 and 2018-19

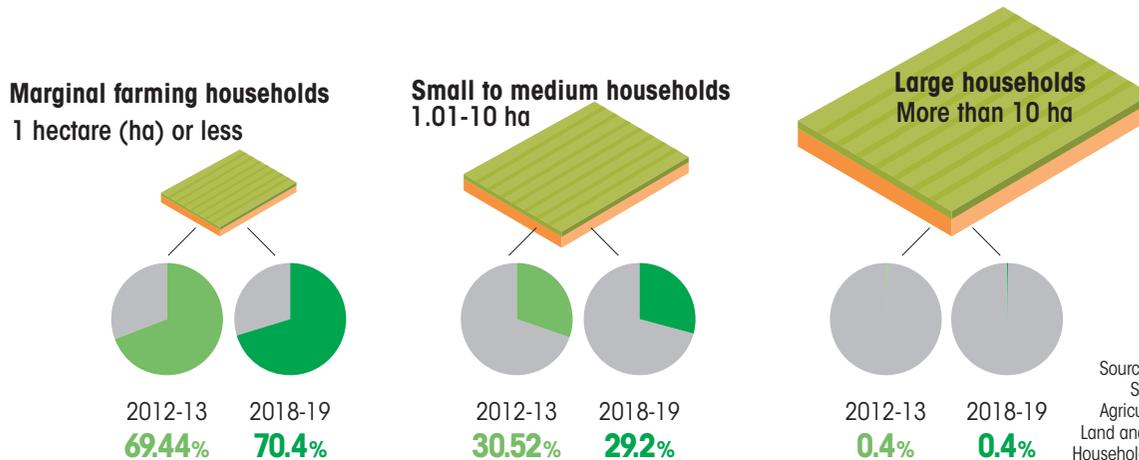

CALLING IT QUILTS

The rural population engaged in farming has decreased from 57.8% in 2012-13 to 54% in 2018-19

SHRINKING LAND

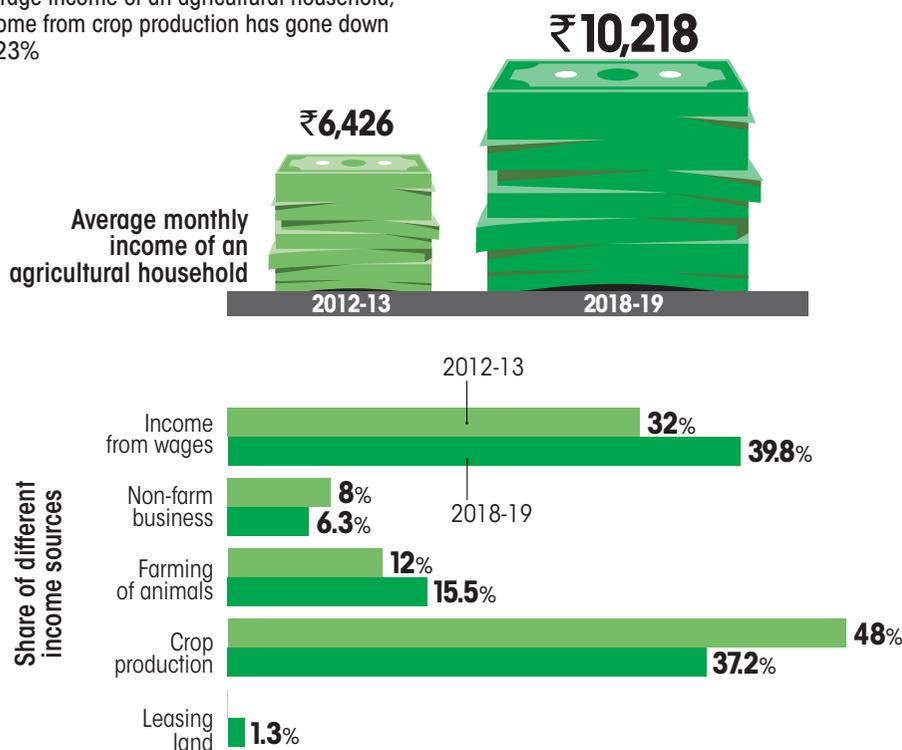

Many small farming households have become marginal land holders between 2012-13 and 2018-19. The share of rich farmers has remained constant

Source: NSS Report No. 587: Situation Assessment of Agricultural Households and Land and Livestock Holdings of Households in Rural India, 2019

DIMINISHING FARM INCOME

While there has been a 60% increase in the average income of an agricultural household, income from crop production has gone down by 23%

MOUNTING DEBT

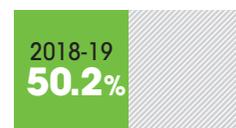

Agricultural households have seen an almost 60% increase in debt in the past six years due to higher input cost and land fragmentation

An **agricultural household** is defined as a household receiving value of produce more than ₹4,000 per month from agricultural activities (for example cultivation of field crops, horticultural crops, fodder crops, plantation, animal husbandry, poultry, fishery, piggery, bee-keeping, vermiculture, sericulture, etc.) and having at least one member self-employed in agriculture either in the principal status or in subsidiary status during the last 365 days.

Reasons for taking a loan

- 57.5%** of loans are taken for farm business (capital and revenue expenditures)
- 11.2%** are for housing
- 9.4%** are for other consumption expenditure
- 6.4%** are for marriages and ceremonies
- 5.4%** are for education and medical purposes
- 6.2%** are for other reasons
- 3.9%** are for non-farm business

FARMER SUICIDES

Over 29 farmers and farm labourers commit suicide in the country every day

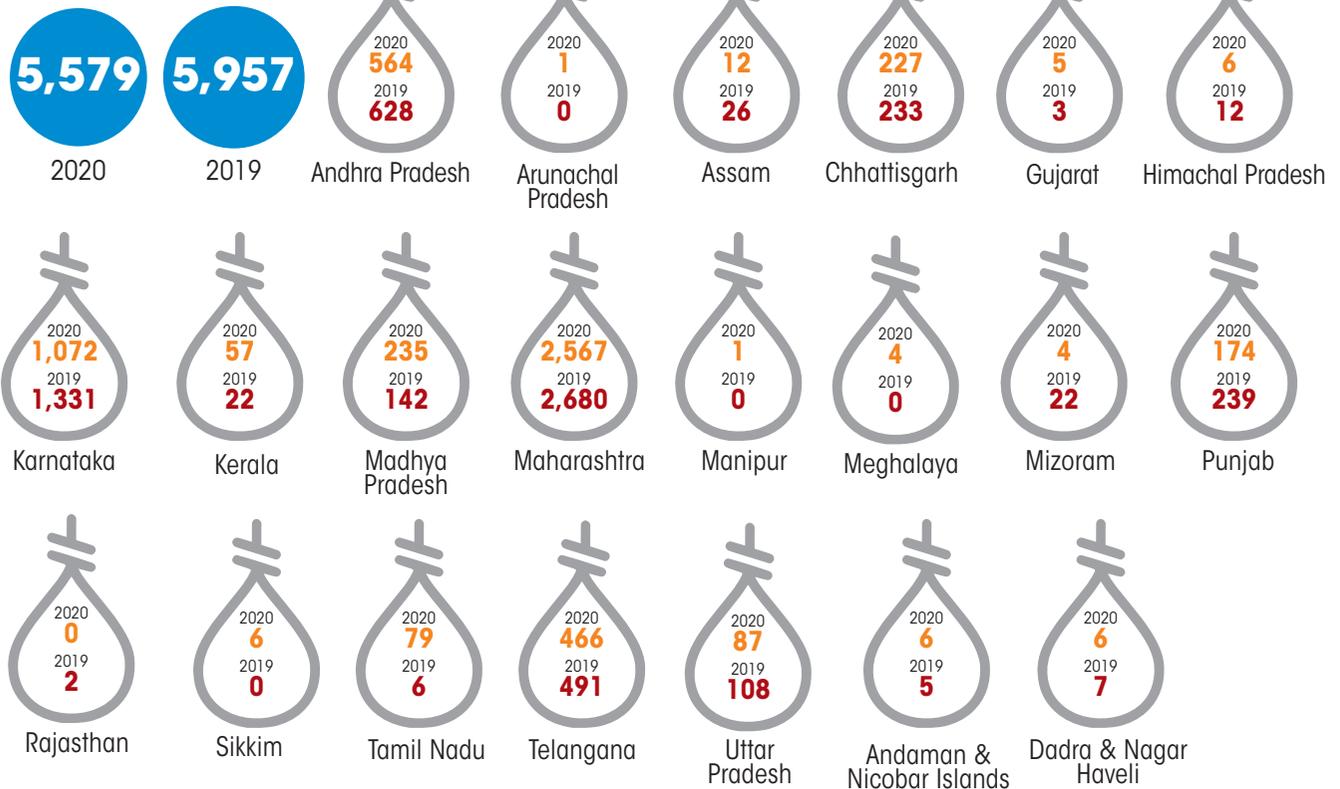

20 states/UTs recorded farmer suicides in 2020. It was 17 in 2019

22 states/UTs recorded suicides by agricultural labourers in 2020. It was 24 in 2019

9 states/UTs recorded an increase in farmer suicides between 2020 and 2019

● 2020 suicides ● 2019 suicides

FARMER# SUICIDES

#Farmers cultivate their own land with or without assistance of agricultural labourers
Source: [Report on Accidental Deaths & Suicides in India](#) for relevant years, National Crime Records Bureau

WHAT AILS OUR FARMERS

While National Crime Records Bureau remains silent on the reasons behind farmer suicides, government's Farmers Suicide in India: Causes and Policy Prescription report in 2016-17 cites three reasons:

Frequent crop failure due to vagaries of monsoon

Absence of assured water resources

Pest attacks/diseases

STATE OF MIGRATION

CLIMATE MIGRATION

44 million additional people will be forced to migrate due to droughts in 2059, compared with the 2000–2015 period

INTERNAL DISPLACEMENT

By 2020, new internal displacements took place across 42 countries due to conflict and violence, and 144 countries due to disasters

HUMAN TRAFFICKING

Bihar, Maharashtra, Uttar Pradesh and West Bengal see frequent extreme weather events as well as high numbers of trafficking cases

Climate migration

Human migration and mobility are age-old phenomena, but their triggers are fast changing due to deteriorating environment and ecosystems. Despite the COVID-19 pandemic, the world saw large-scale displacements triggered by climate and weather events in 2020 and 2021

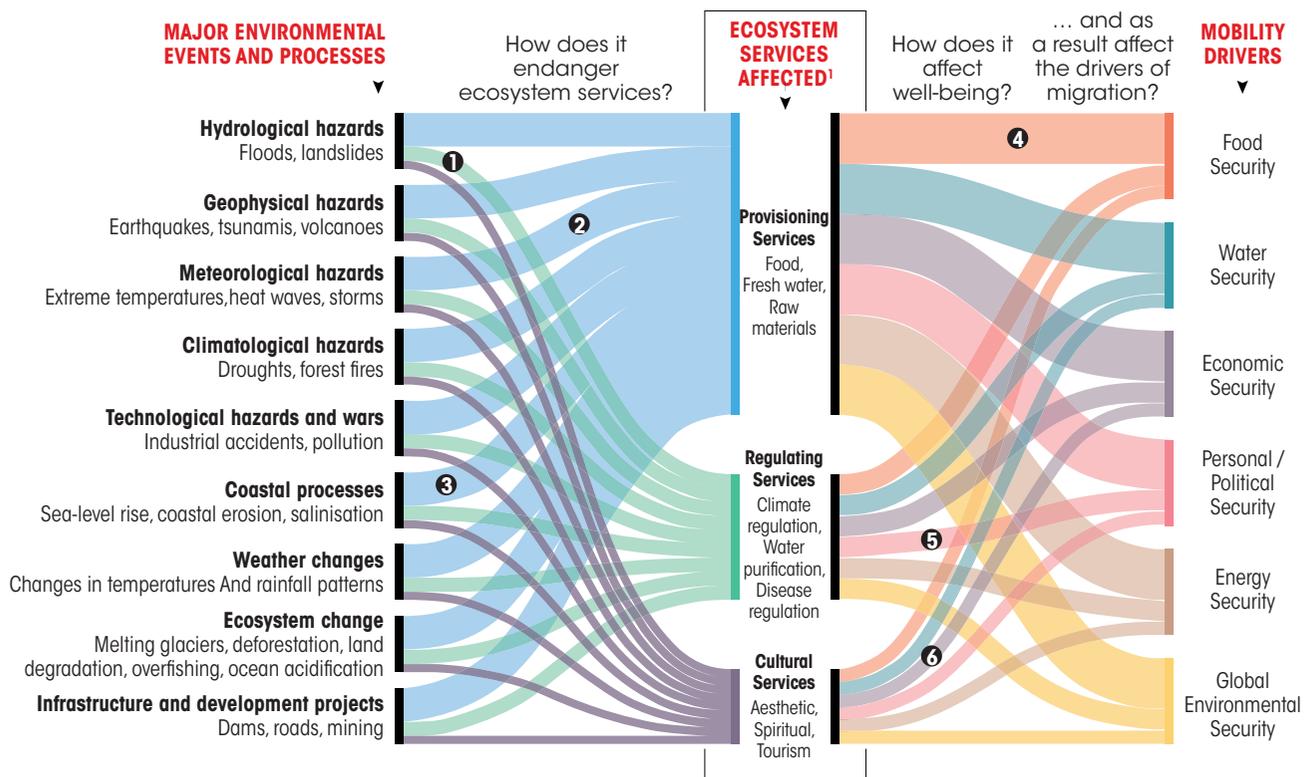

44 million
additional people will be forced to migrate due to droughts in 2059, compared with the 2000–2015 period

143 million
people, which is a little more than the population of Maharashtra, could be moving within their own countries in the next three decades because of adverse climate impacts in three regions of the world

Cost of environmental degradation

Links between environmental change, ecosystems and human mobility

Examples:

- 1 Cyclone destroying mangrove > jeopardising protection from future hazards
- 2 Loss of agricultural land > crop yield decrease
- 3 Sea-level rise and salt-water intrusion > freshwater resources affected
- 4 Loss of crops > famine and malnutrition
- 5 Epidemics > public health risks (and potential social unrest)
- 6 Tourism affected > job losses

1. Ecosystem services are the direct and indirect contributions of ecosystems to human well-being. These services are grouped into four categories: Provisioning, Regulating, Cultural, and Supporting services. Supporting services, as overarching services, are not represented in this diagram. The arrows' width does not represent an exact number (this is a conceptual diagram).

Source: Millennium Ecosystem Assessment (2005) (Mokhnacheva, Ionesco), Gemenne, Zoï Environment Network, 2015

Internal displacement

by **conflicts** and **disasters**

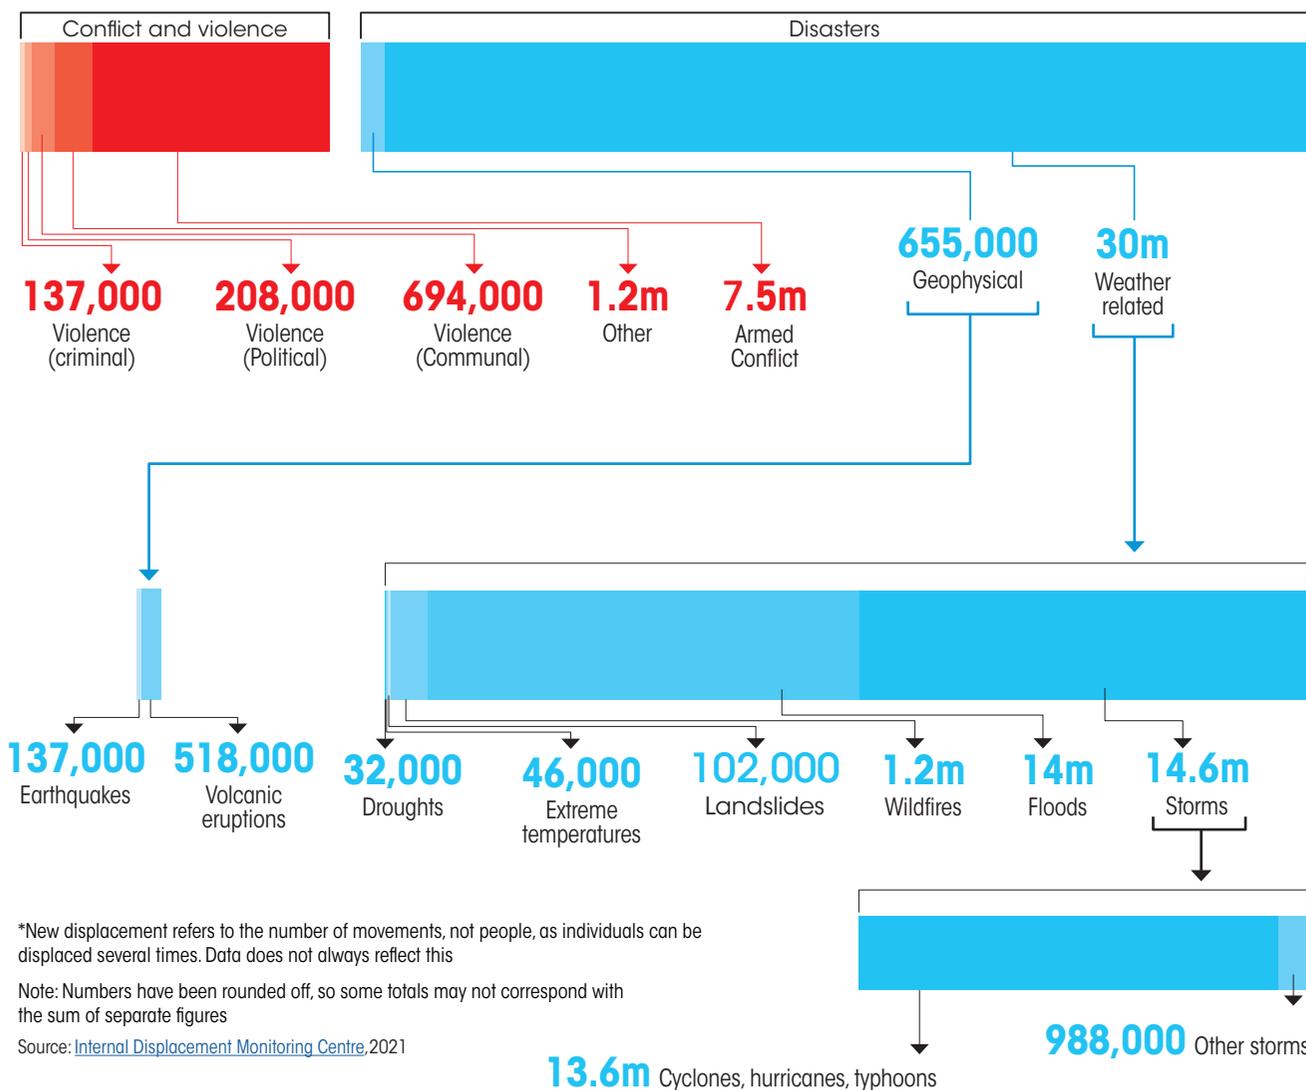

76 per cent of internal displacements globally in 2020 were triggered by climate disasters

40.5m

Total new displacements in 2020

(conflict and violence)
9.8m

(disasters)
30.7m

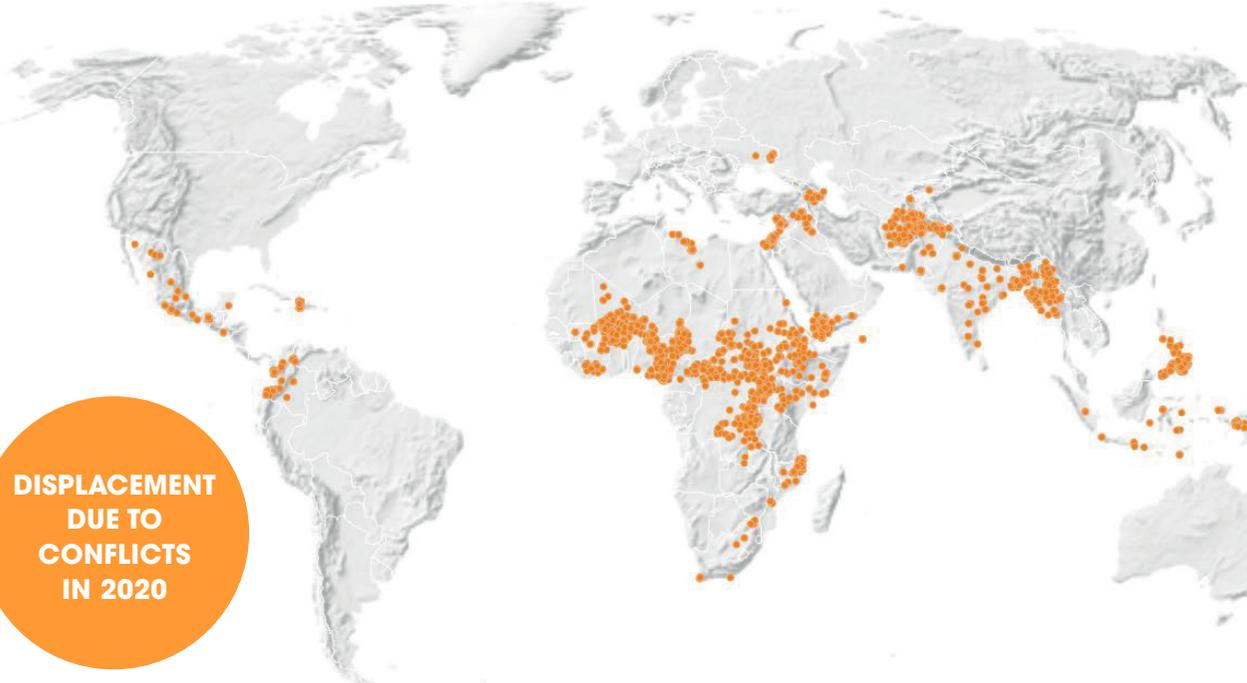

*New displacement refers to the number of movements, not people, as individuals can be displaced several times. Data does not always reflect this

Note: Numbers have been rounded off, so some totals may not correspond with the sum of separate figures

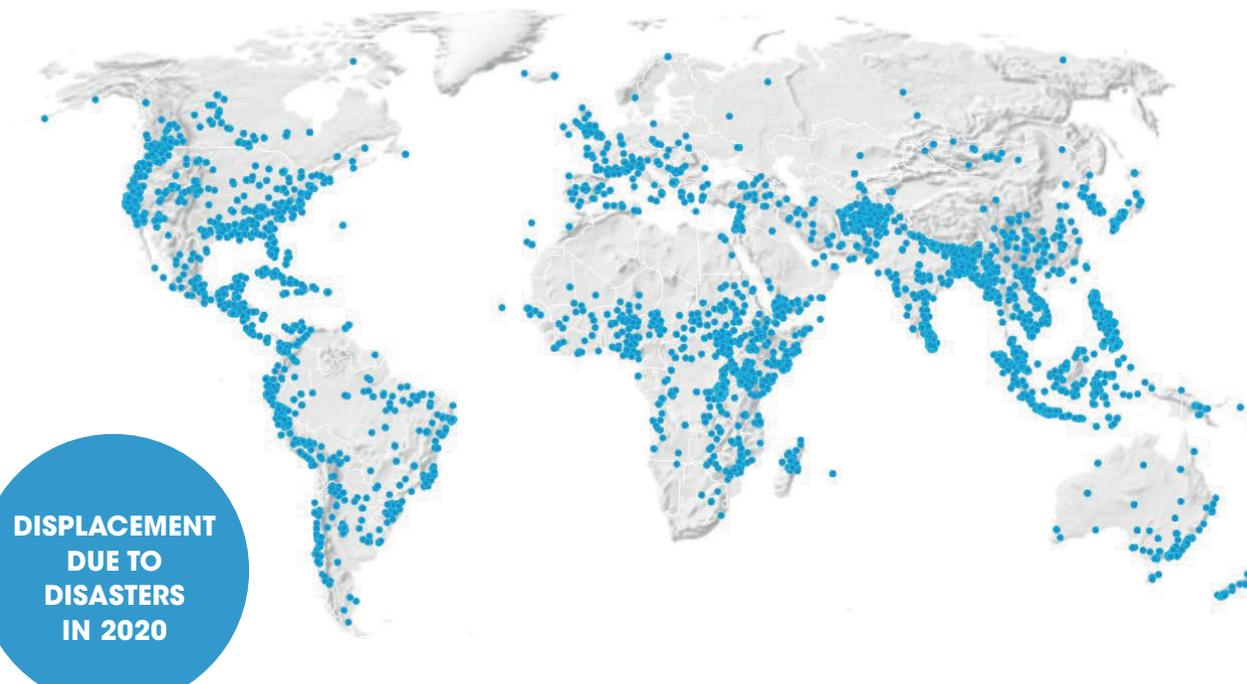

Source: [Internal Displacement Monitoring Centre, 2021](#)

Climate a bigger problem than conflicts

By the end of 2020, new internal displacements took place across 42 countries and territories due to conflict and violence, and 144 countries and territories due to disasters

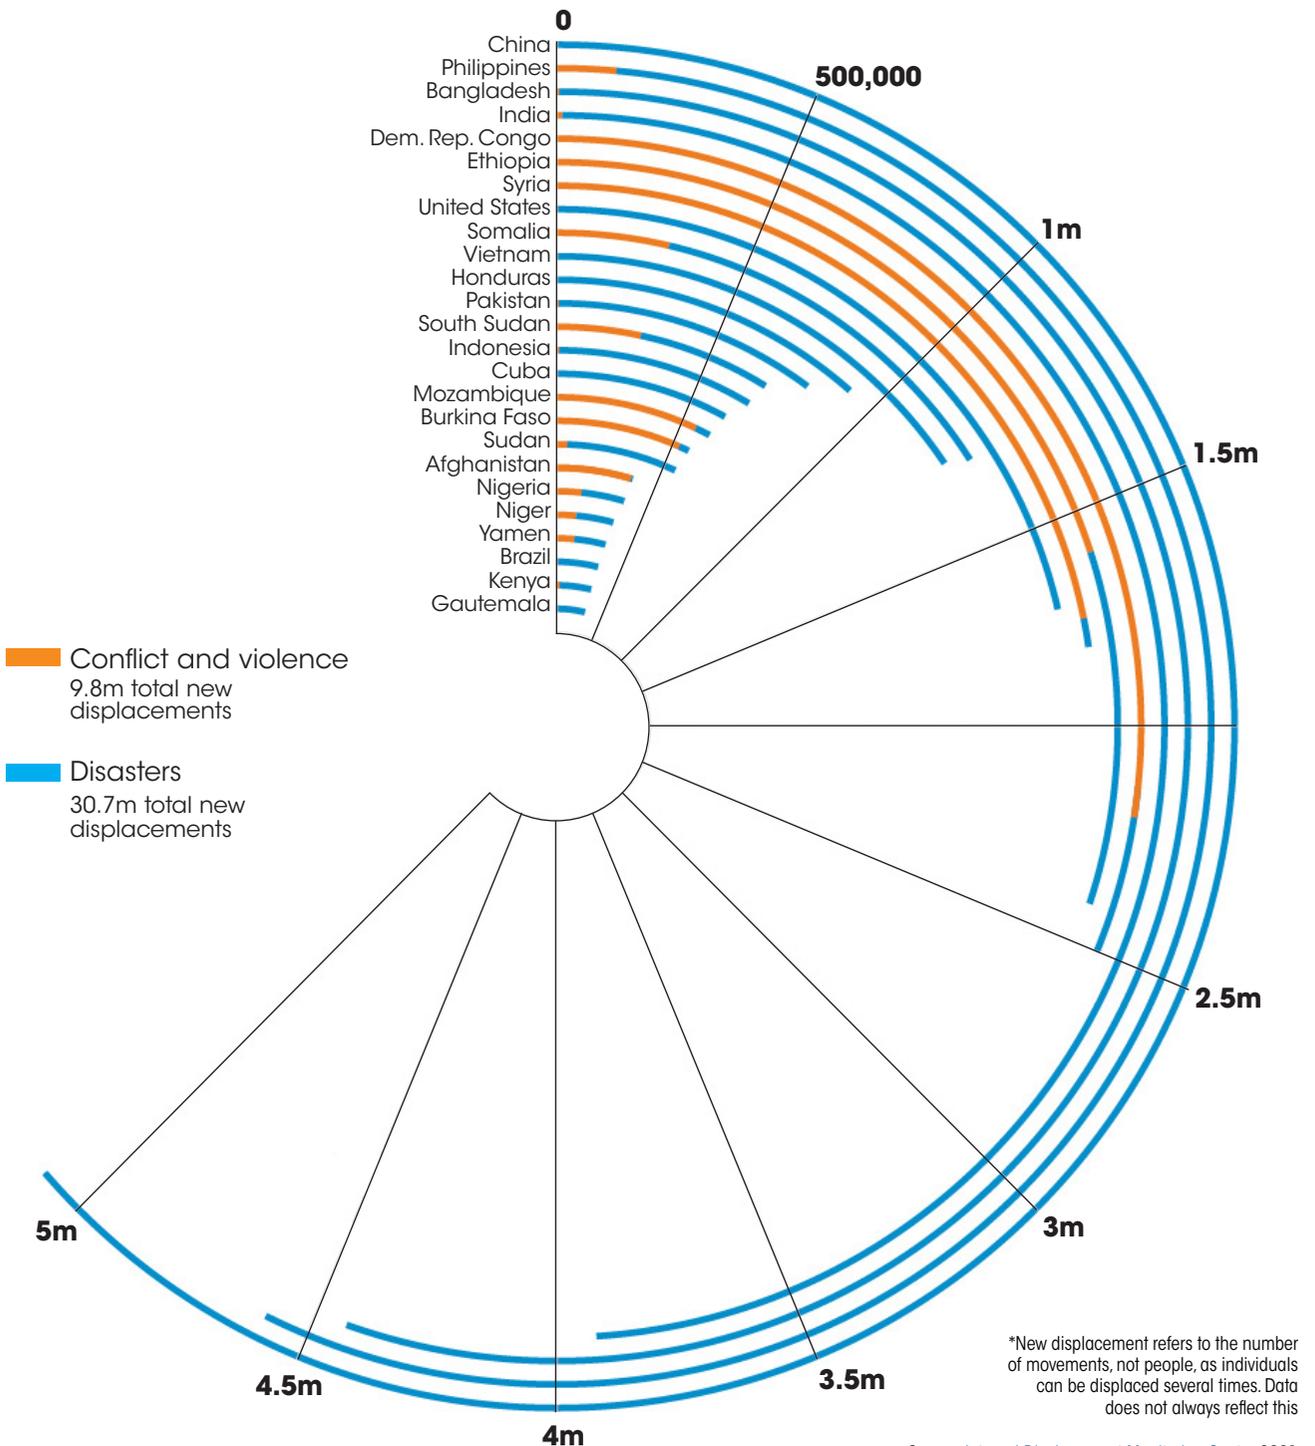

**DISPLACEMENT
DUE TO
CONFLICTS
IN 2020**

**DISPLACEMENT
DUE TO
DISASTERS
IN 2020**

India, fourth worst hit by disasters

Most disaster-related displacements were the result of tropical storms and floods in East Asia and the Pacific and South Asia. China, the Philippines and Bangladesh each recorded more than 4 million new displacements, many of them preemptive evacuations

Source: [Internal Displacement Monitoring Centre, 2021](#)

Human trafficking

While coastal states of India are seeing a rapid increase in floods and cyclones brought on by the impacts of climate change, interior regions see slower effects such as droughts. As a whole, the country is at severe risk to climate change, says the Union government's Climate Vulnerability Index in 2019-20. Even Maharashtra, which is marked least at risk, has a high score of 0.42 out of 1. The growing threat of climate change impacts also increases the instances of displacement and migration, making people more vulnerable to trafficking. Down To Earth visited four states that see frequent climate change-induced weather events as well as high numbers of trafficking cases

CLIMATE VULNERABILITY INDEX (OUT OF 1)

- Highly vulnerable states (0.58-0.67)
- Moderately vulnerable states (0.50-0.58)
- Low vulnerable states (0.42-0.50)

Districts with migration

DISTRICTS THAT SEE MIGRATION

Osmanabad, Mumbai, Solapur, Beed, Parbhani, Nanded, Latur, Nagpur, Pune

DESTINATIONS

Other parts of Maharashtra, Delhi, Goa, West Bengal, Rajasthan

MAHARASHTRA

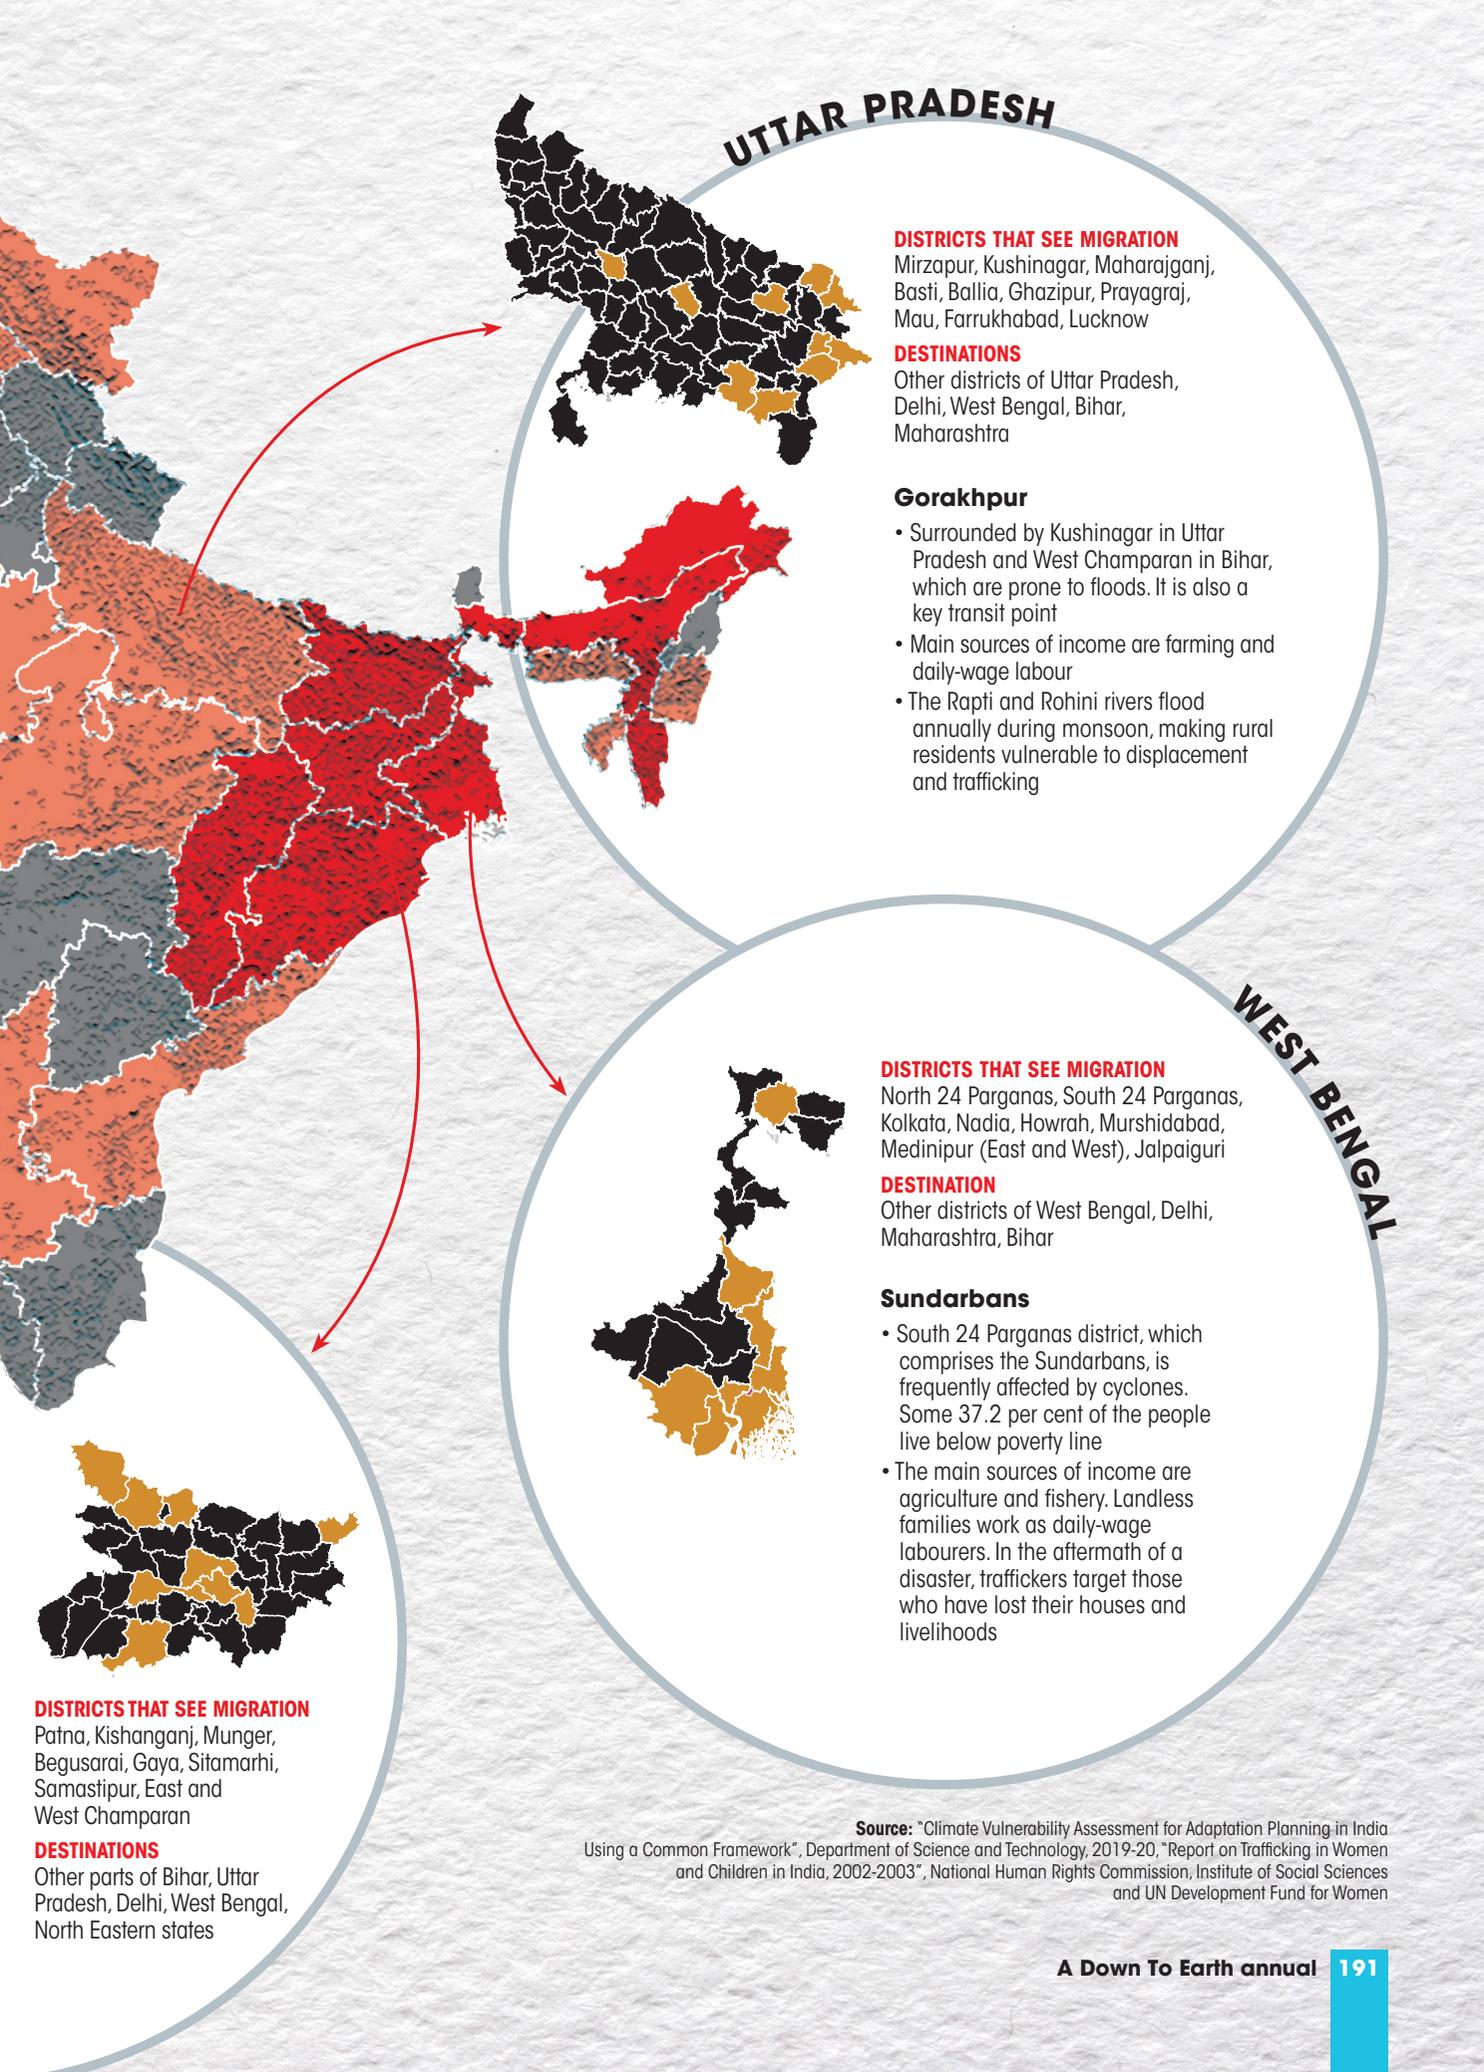

Marathwada

- It is a severely drought prone region whose major crops—sugarcane and cotton—increase water scarcity
- Poverty-ridden Beed, Osmanabad, Latur and Parbhani districts are major source points from where young girls are trafficked when parents migrate in search of work.
- During the first COVID-19 lockdown in 2020, some 32,000 women went missing from the state as a whole
- The state government in 2021 commissioned 45 anti-human trafficking units across regions to curb the increase in such cases

BIHAR

Sitamarhi and Gaya

- Sitamarhi sees floods on the Bagmati river after the monsoon every year, which impacts livelihood. People migrate to Nepal and Kashmir to seek employment
- In the absence of parents, teenage boys are trafficked to factories in Jaipur, Hyderabad and Chennai. Every year around 200 boys from Sitamarhi are rescued in Jaipur alone
- Gaya district is drought prone due to rocky terrain. People go to Uttar Pradesh and central India to work in brick-kilns, leaving their children as targets for traffickers

UTTAR PRADESH

DISTRICTS THAT SEE MIGRATION

Mirzapur, Kushinagar, Maharajganj, Basti, Ballia, Ghazipur, Prayagraj, Mau, Farrukhabad, Lucknow

DESTINATIONS

Other districts of Uttar Pradesh, Delhi, West Bengal, Bihar, Maharashtra

Gorakhpur

- Surrounded by Kushinagar in Uttar Pradesh and West Champaran in Bihar, which are prone to floods. It is also a key transit point
- Main sources of income are farming and daily-wage labour
- The Rapti and Rohini rivers flood annually during monsoon, making rural residents vulnerable to displacement and trafficking

WEST BENGAL

DISTRICTS THAT SEE MIGRATION

North 24 Parganas, South 24 Parganas, Kolkata, Nadia, Howrah, Murshidabad, Medinipur (East and West), Jalpaiguri

DESTINATION

Other districts of West Bengal, Delhi, Maharashtra, Bihar

Sundarbans

- South 24 Parganas district, which comprises the Sundarbans, is frequently affected by cyclones. Some 37.2 per cent of the people live below poverty line
- The main sources of income are agriculture and fishery. Landless families work as daily-wage labourers. In the aftermath of a disaster, traffickers target those who have lost their houses and livelihoods

STATE OF HEALTH

HEALTH INDEX

Assam marks maximum improvement by moving up 3 ranks while Andaman and Nicobar registers maximum drop in ranking

NATIONAL FAMILY HEALTH SURVEY

4 percentage point increase in obesity in men in Indian households between 2015-16 and 2019-21

CANCER BURDEN

India reported 24,268 cancer cases in children (0-14 years) during 2012-19, which is 4% of total cancer cases

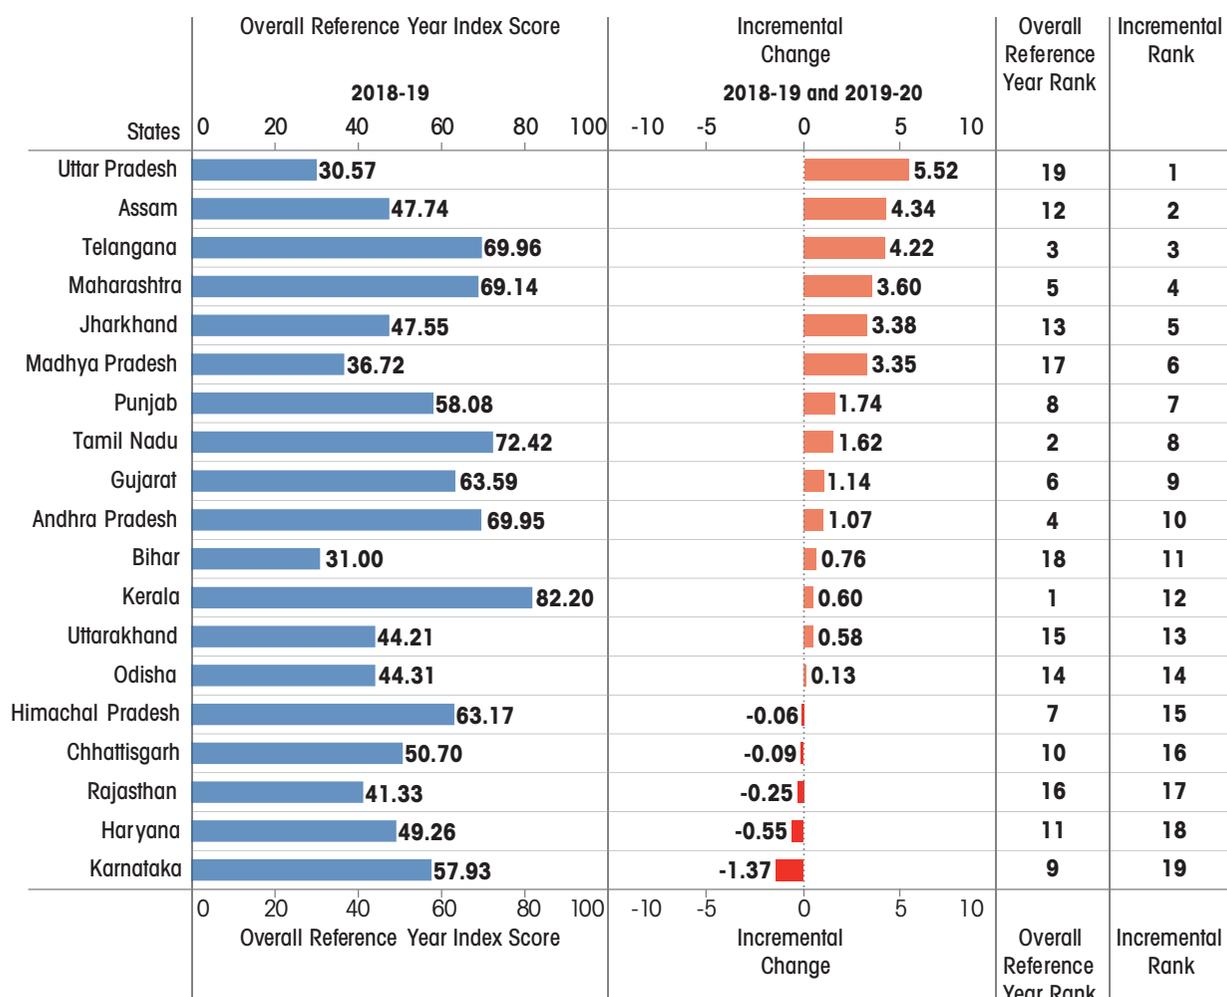

Health index

Among the 19 large states, the rankings of four states improved and five states deteriorated in 2019–20 compared to 2018–19. In 2019–20, three of the eight small states improved their rankings. Assam made the maximum improvement by moving up 3 ranks (from 15 to 12), while Andaman and Nicobar registered the maximum drop in rank (down from 4 to 7).

The health ranking of states and union territories is based on 24 indicators that include health outcomes (such as mortality rate and gender ratio), governance and information (such as institutional deliveries (%), average occupancy of chief medical officer, and so on), and key inputs and process domain (such as functional health centres and other health infrastructure)

Performance of large states

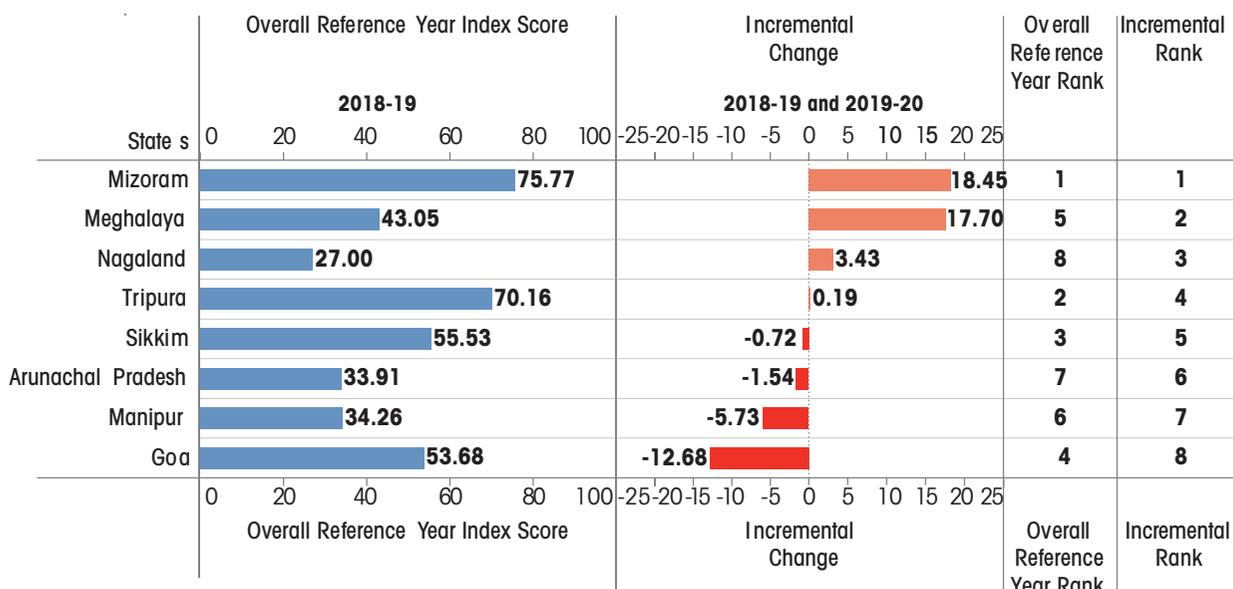

Kerala, Tamil Nadu and Telangana are the best three performers. Uttar Pradesh is the lowest overall performer, but it is ranked at the top in terms of incremental change from 2018-19. Three states have seen a dip in performance in the past year

Source: Fourth round of Healthy States Progressive India report by NITI Aayog, Ministry of Health and Family Welfare, released in January 2022

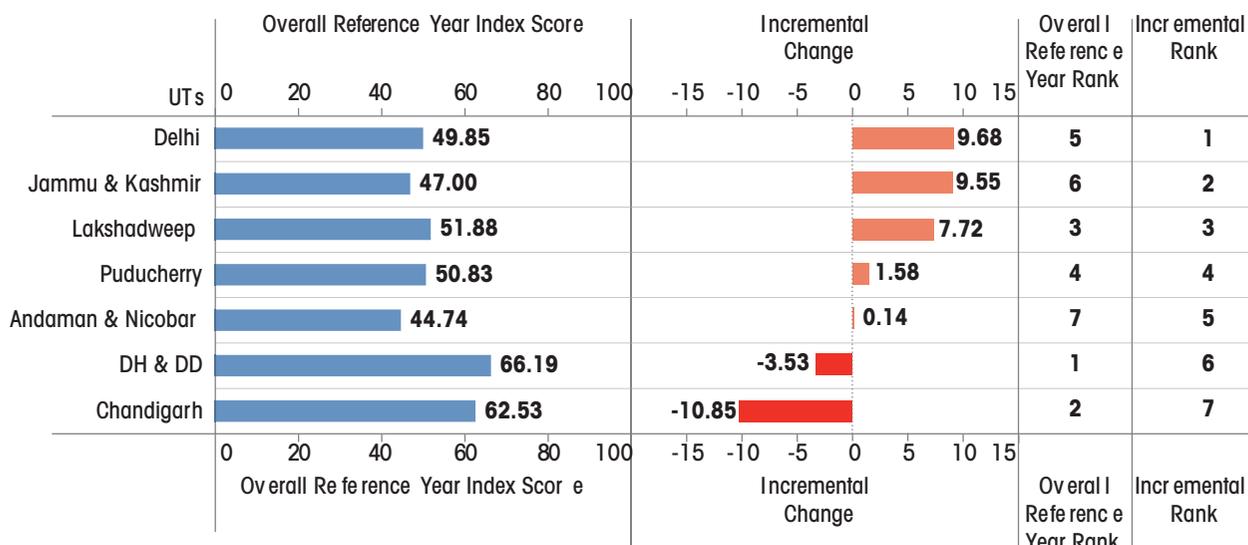

Performance of small states

Mizoram is the best in both overall performance and incremental change over 2018-19. Three small states have registered a dip in their health performance between 2018-19 and 2019-20

Performance of Union Territories

Delhi, Jammu & Kashmir ranked among the bottom UTs in terms of overall performance but emerged as the leading performers in terms of incremental performance over 2018-19. The performance of the two best ranked UTs has slipped in 2019-20

Source: Fourth round of Healthy States Progressive India report by NITI Aayog, Ministry of Health and Family Welfare, released in January 2022

UNHEALTHY SIGNS

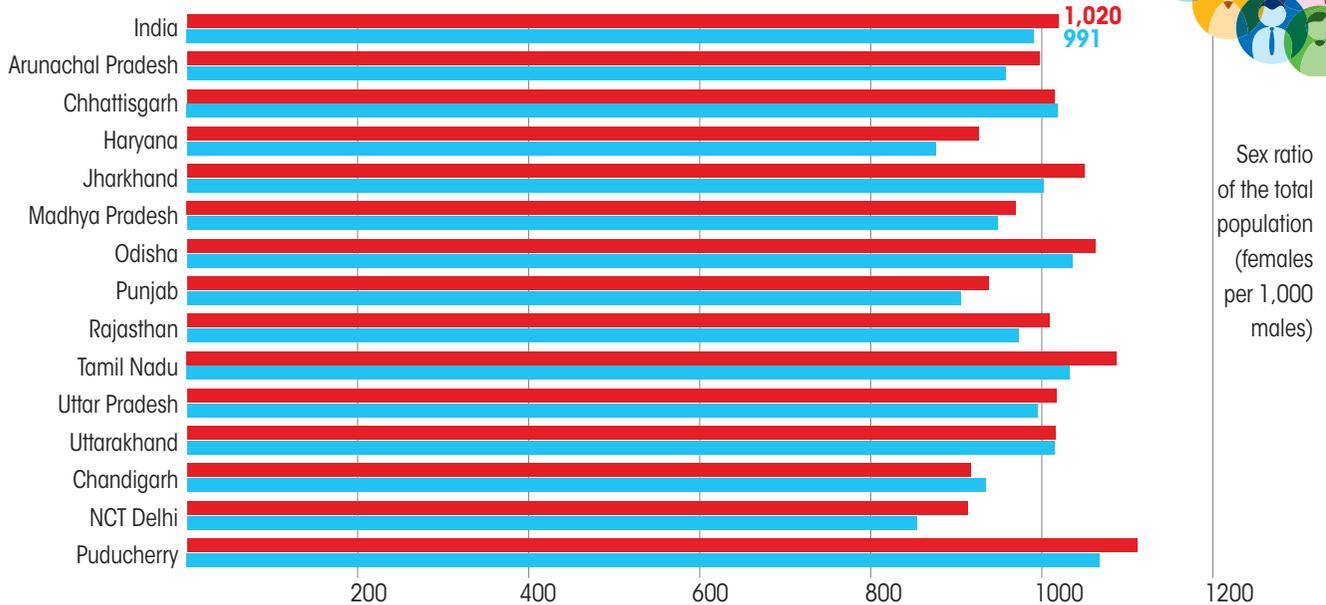

While India has made overall progress in most health indicators between 2015-16 and 2019-21, states have skewed progress

Sex ratio

Delhi and Chandigarh have seen a decline in their female population

■ NFHS-5 (2019-21) ■ NFHS-4 (2015-16)

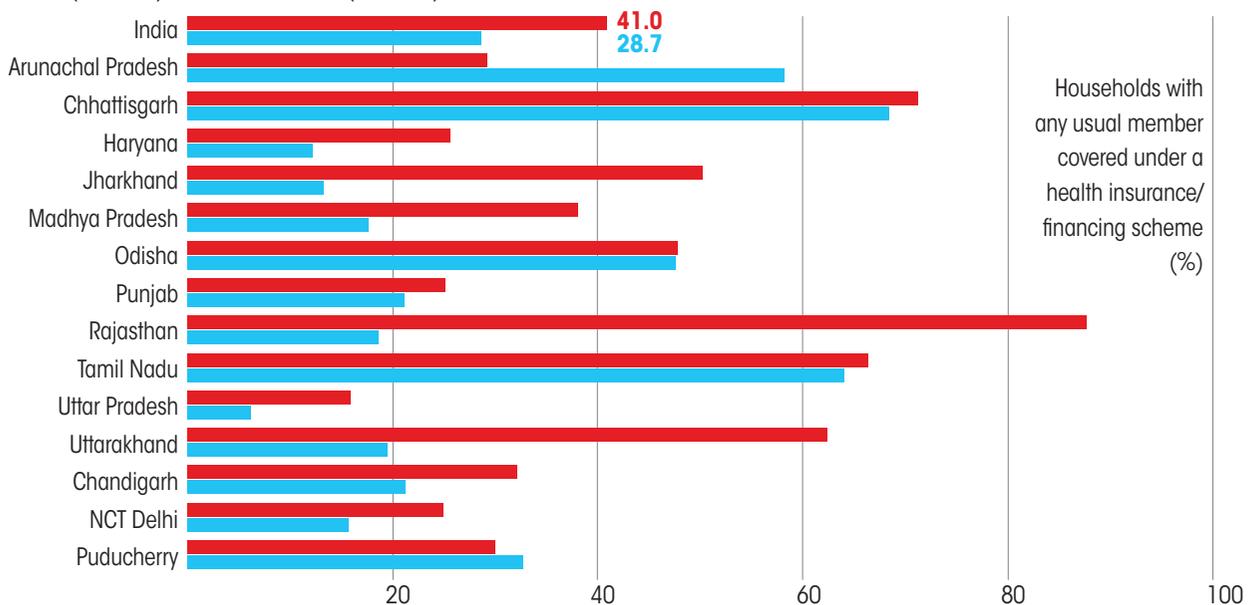

Sex ratio of the total population (females per 1,000 males)

Health insurance coverage

Just 15.9% of households in Uttar Pradesh, the most populous state, are insured

■ NFHS-5 (2019-21) ■ NFHS-4 (2015-16)

Households with any usual member covered under a health insurance/financing scheme (%)

Source: Phase-2 of the National Family Health Survey (NFHS-5), November 2021

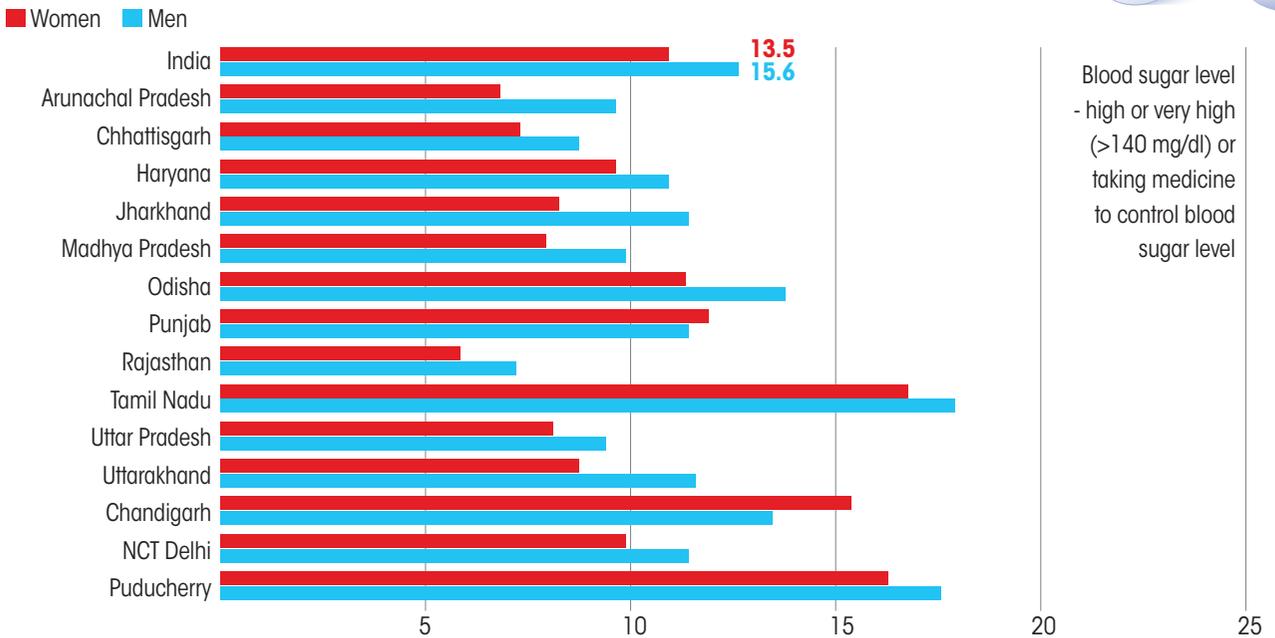

LIFESTYLE RISKS

Puducherry households have a high burden of blood sugar, blood pressure and obesity

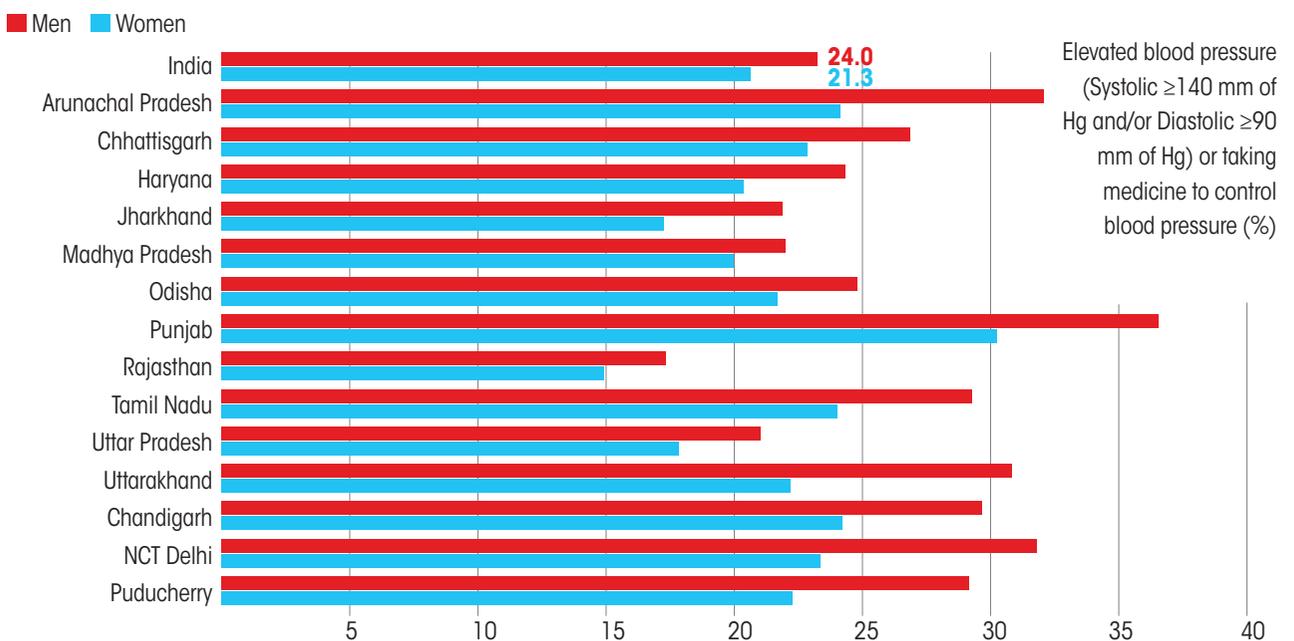

Blood sugar

Tamil Nadu and Puducherry have the highest prevalence of blood sugar

Blood pressure

In four states/UTs, more than 30% of households have a male member with high blood pressure

Source: Phase-2 of the National Family Health Survey (NFHS-5), November 2021

Obesity

All states/UTs have seen an increase in obese and overweight population

4

percentage point increase in obese men in Indian households between 2015-16 and 2019-21

3.4

percentage point increase in obese women in Indian households between 2015-16 and 2019-21

46.2%

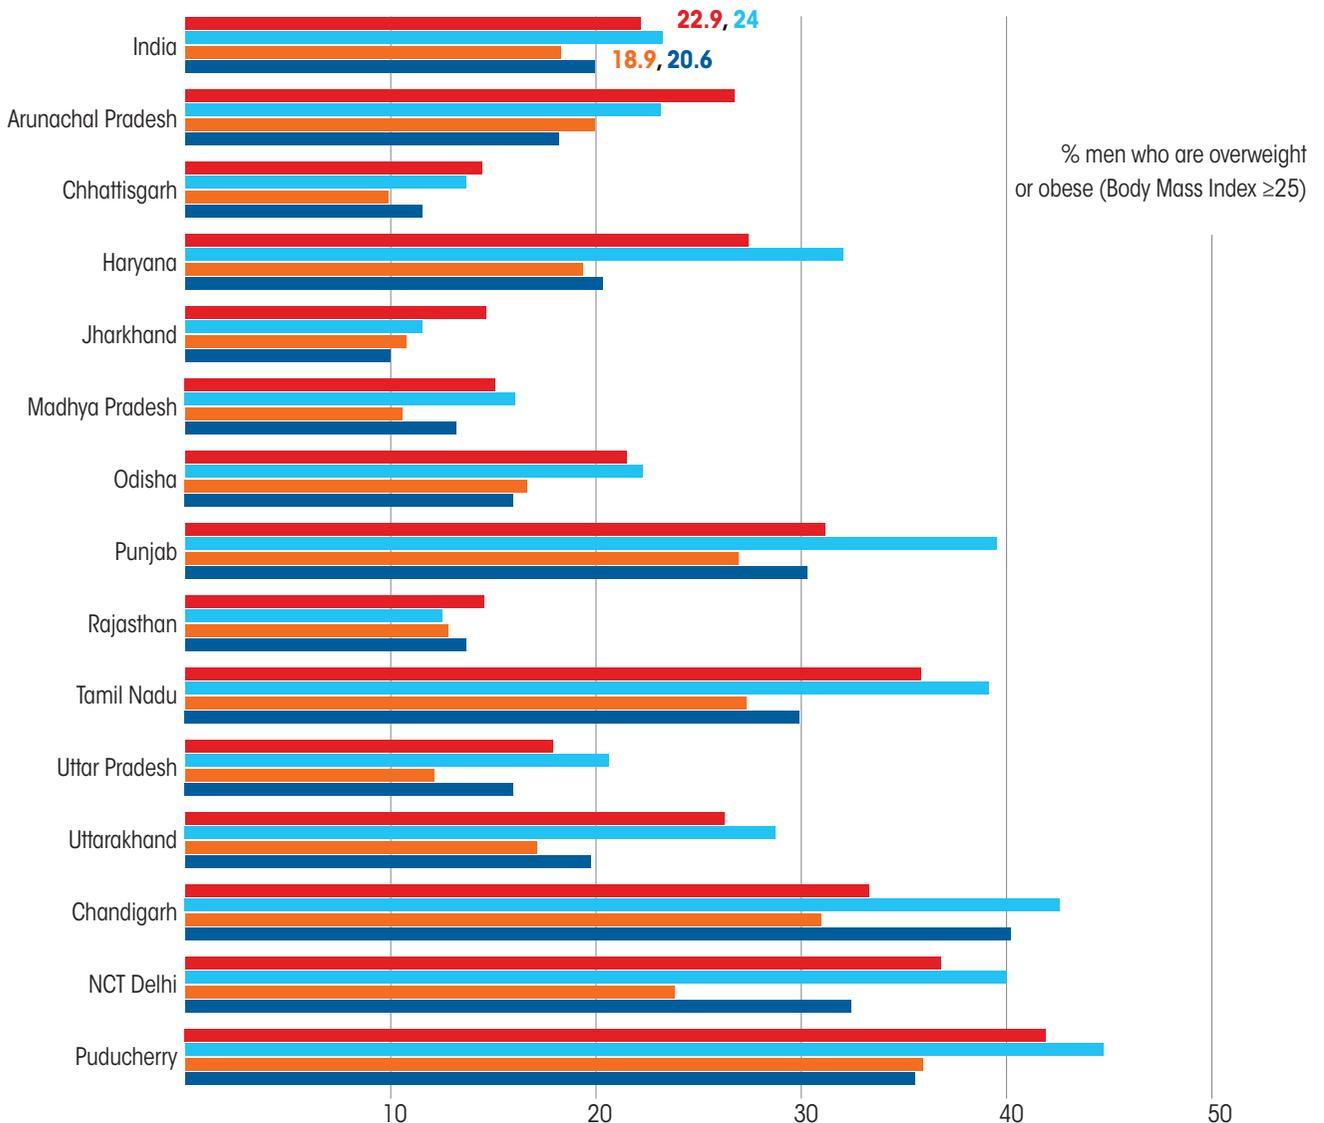

women in Puducherry households are obese. The share of men is 43.3%

NFHS-5 (2019-21)

■ Obese men ■ Obese women

NFHS-4 (2015-16)

■ Obese men ■ Obese women

Source: Phase-2 of the National Family Health Survey (NFHS-5), November 2021

WOMEN HEALTH

Almost 50% of child births in private hospitals are through caesarean procedures. At the same time, the prevalence of anaemia in women is also on the rise

Caesarean births

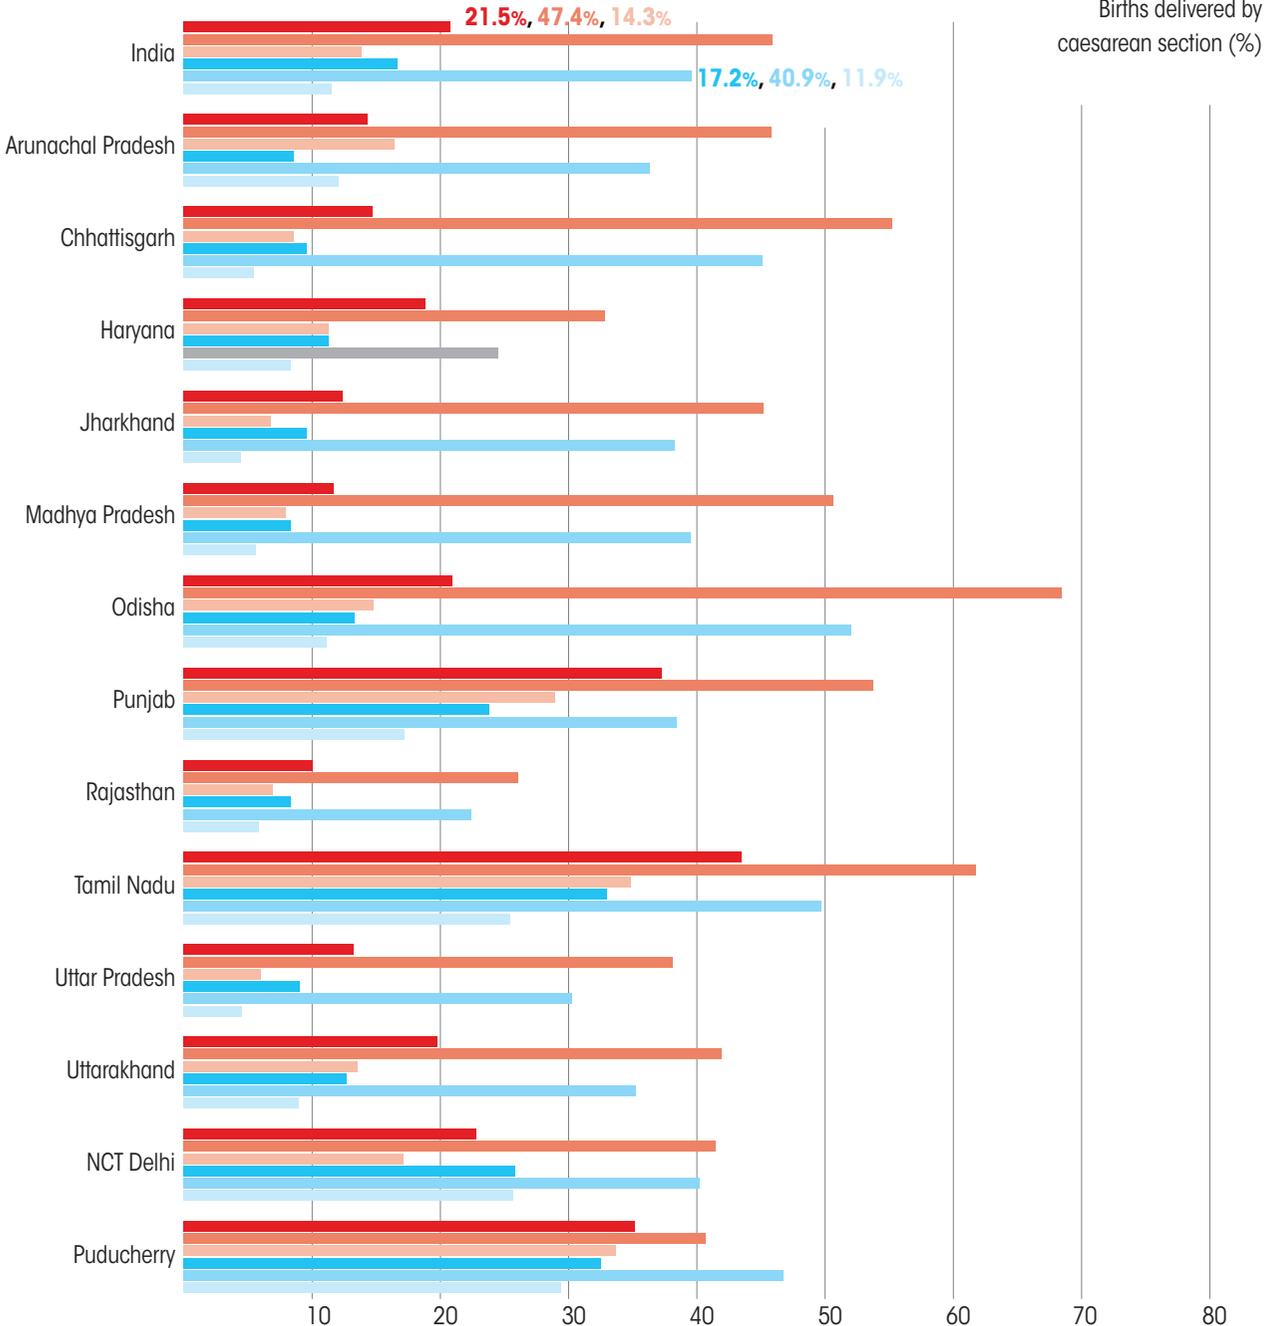

70% of child births in private hospitals in Odisha are through caesarean

NFHS-5 (2019-21)

NFHS-4 (2015-16)

■ Total ■ Private ■ Public

■ Total ■ Private ■ Public

Source: Phase-2 of the National Family Health Survey (NFHS-5), November 2021

STATE OF HEALTH

Anaemic

More women in India are now suffering from anaemia

3.9

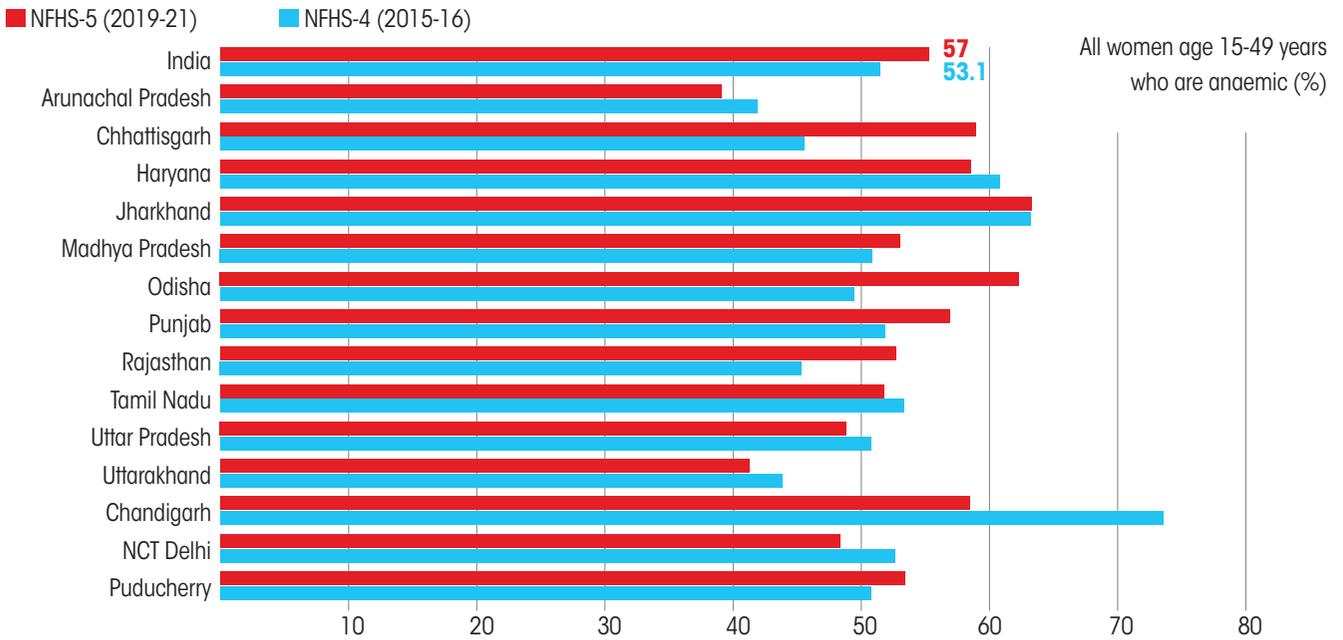

percentage point increase in anaemia among women between 2015-16 and 2019-21

13.8

percentage point increase in women suffering from anaemia in Chhattisgarh between 2015-16 and 2019-21

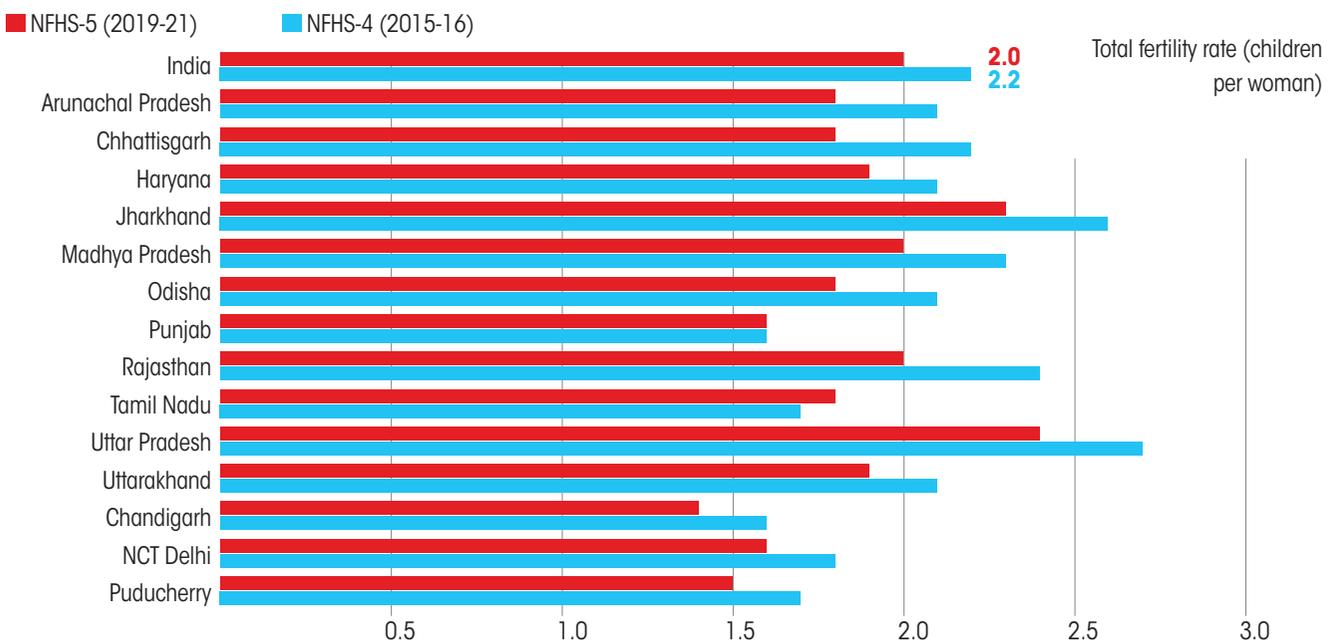

13.3

percentage point increase in women suffering from anaemia in Odisha between 2015-16 and 2019-21

Fertility rate

Tamil Nadu is the only state to record an increase in fertility rate

Source: Phase-2 of the National Family Health Survey (NFHS-5), November 2021

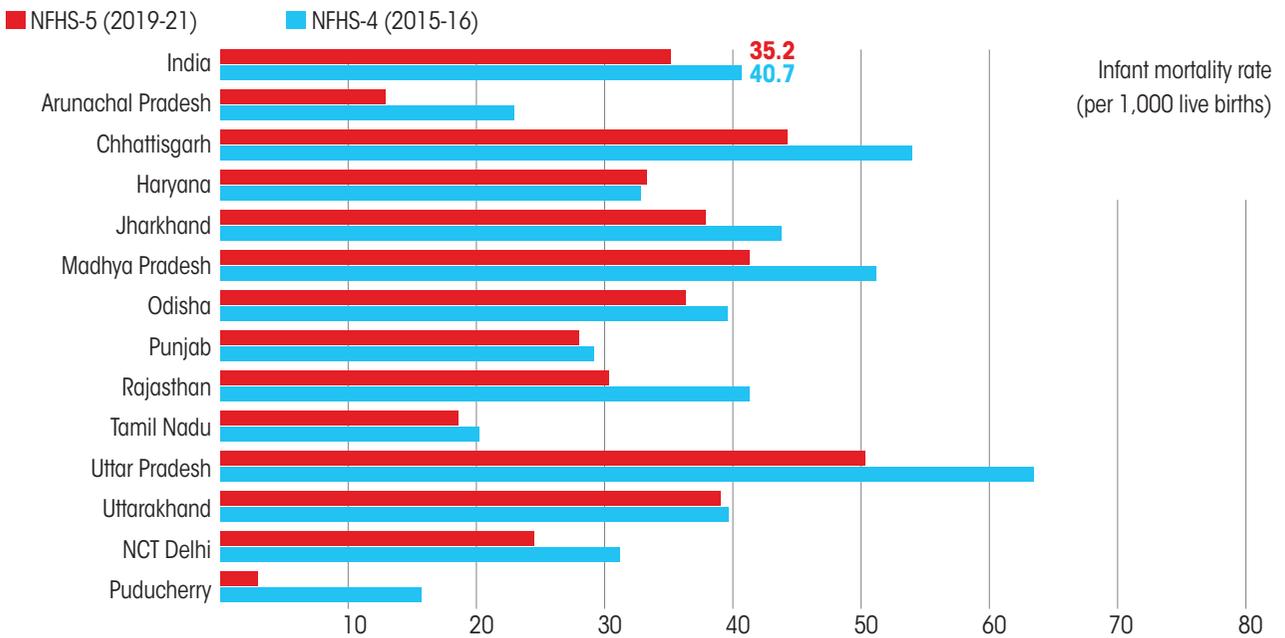

INFANT, CHILD MORTALITY

India has an infant mortality target of 28 per 1,000 live births, and neonatal mortality to 16 per 1,000 live births. The country is nowhere close to them

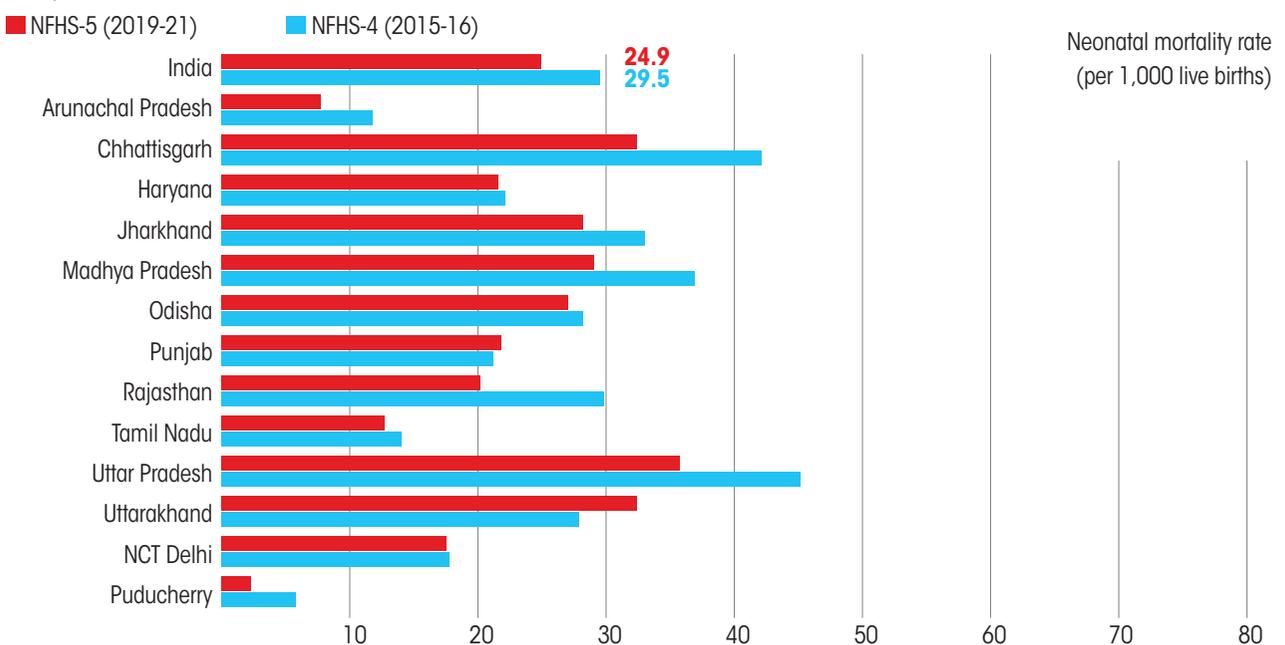

Infant mortality

Haryana has seen an increase in infant deaths

Neonatal mortality

Punjab has seen an increase in neonatal deaths

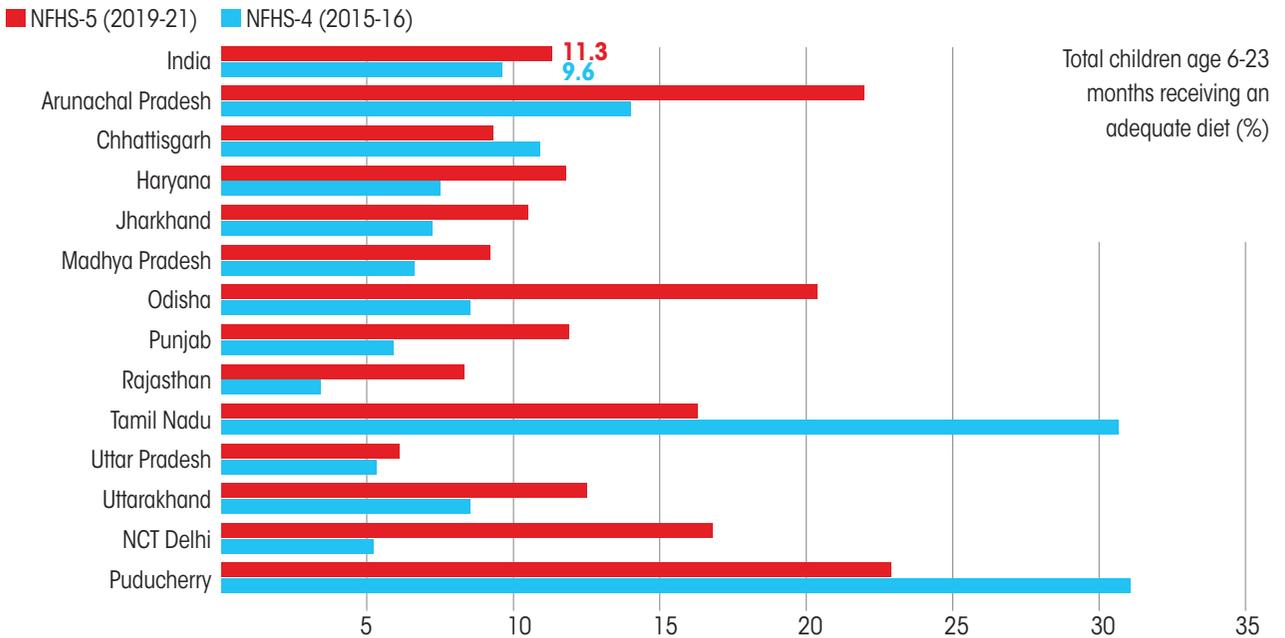

Source: Phase-2 of the National Family Health Survey (NFHS-5), November 2021; India targets as mentioned in SDG India Index 2021 by NITI Aayog

CHILD HEALTH

India has a long way to go before realising its target of bringing down underweight (low weight-for-age) children under five years of age to 1.9% and stunted (low height-for-age) to 6%

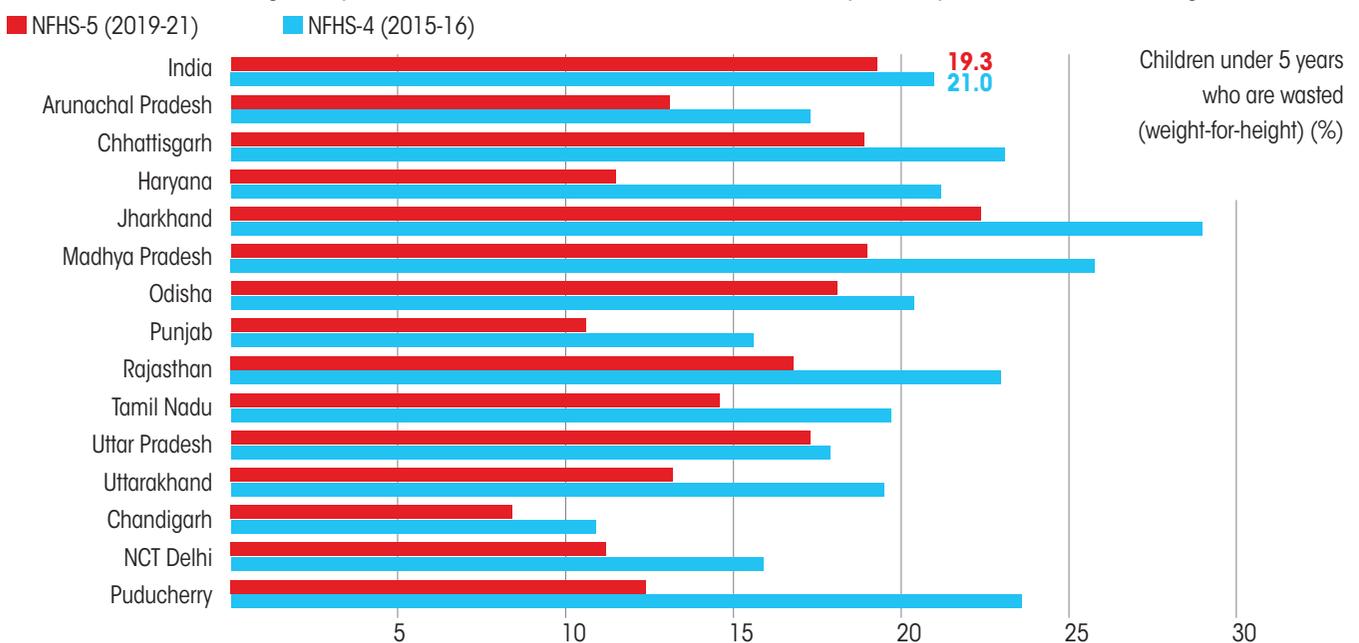

Infant and diet

Tamil Nadu has seen an alarming drop in infants receiving adequate diet

Wasted children

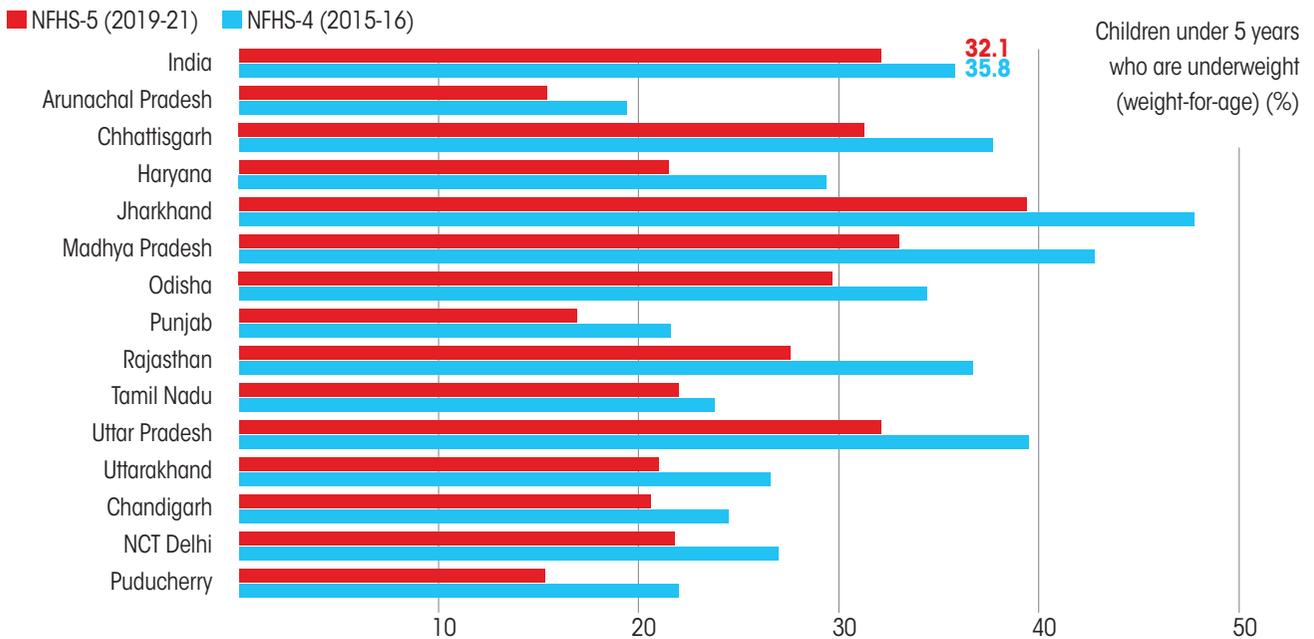

Jharkhand has the highest prevalence of wasted children, followed by Madhya Pradesh, Chhattisgarh

Source: Phase-2 of the National Family Health Survey (NFHS-5), November 2021; India targets as mentioned in SDG India Index 2021 by NITI Aayog

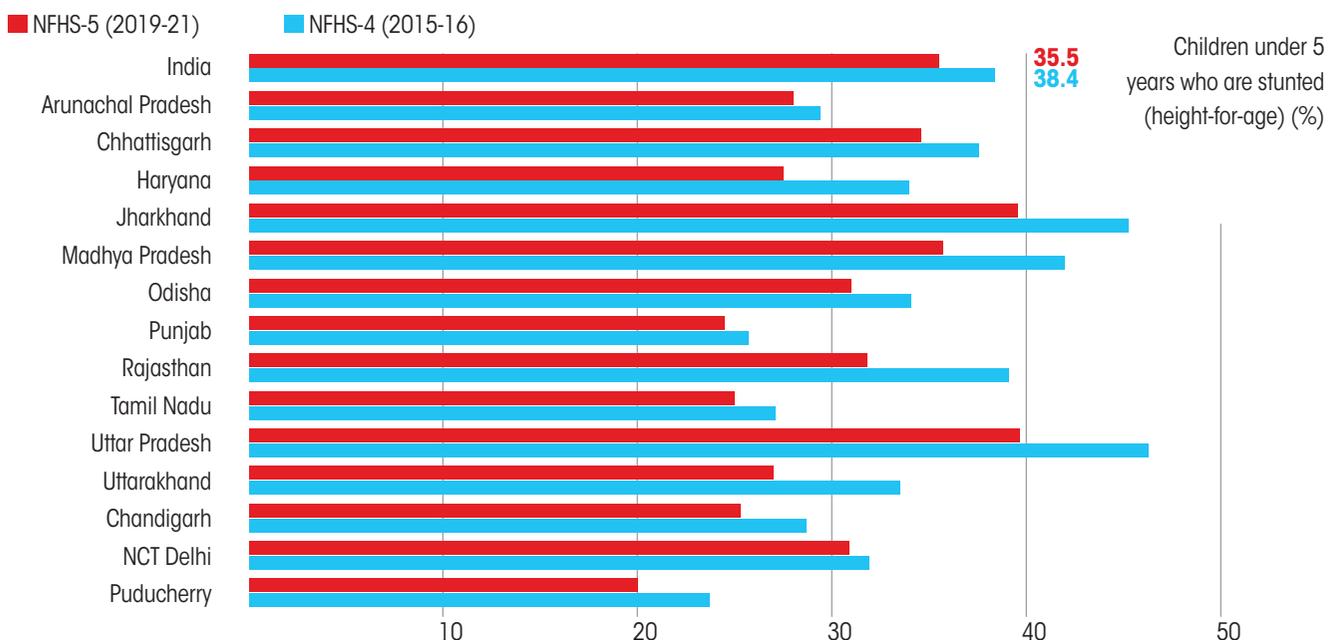

Underweight children

One out of almost every three children under 5 years in the country is underweight

Stunted children

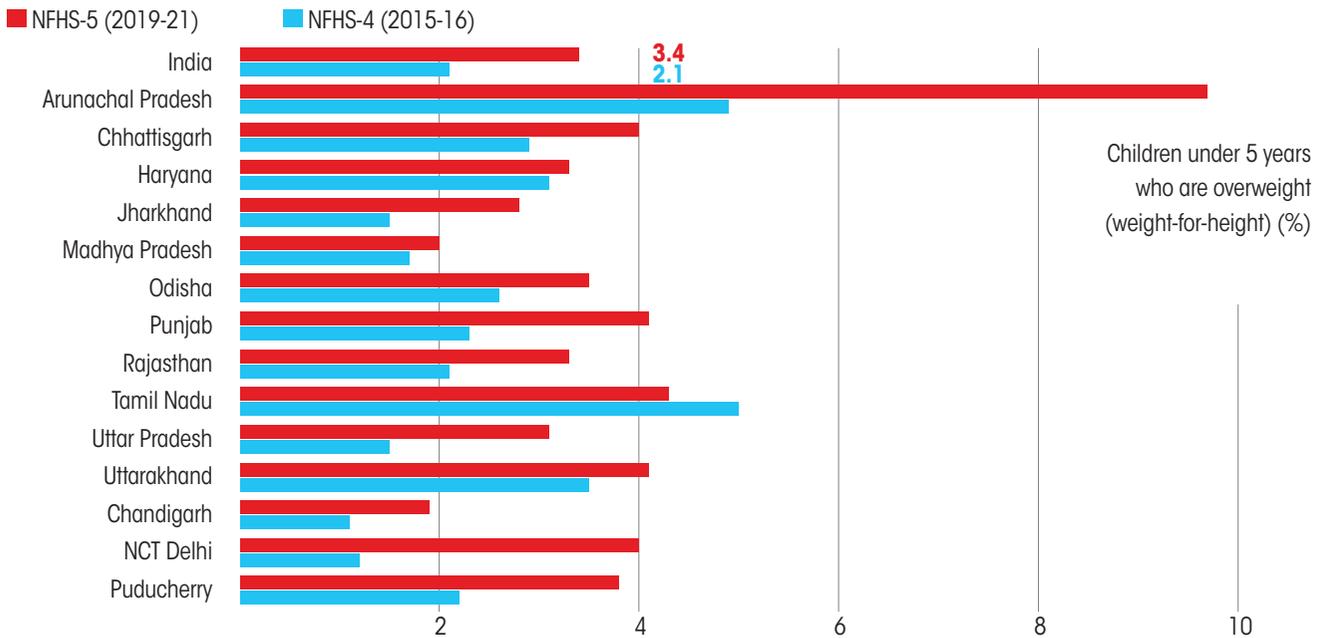

Uttar Pradesh has the highest prevalence of stunted children, followed by Jharkhand and Madhya Pradesh

Source: Phase-2 of the National Family Health Survey (NFHS-5), November 2021

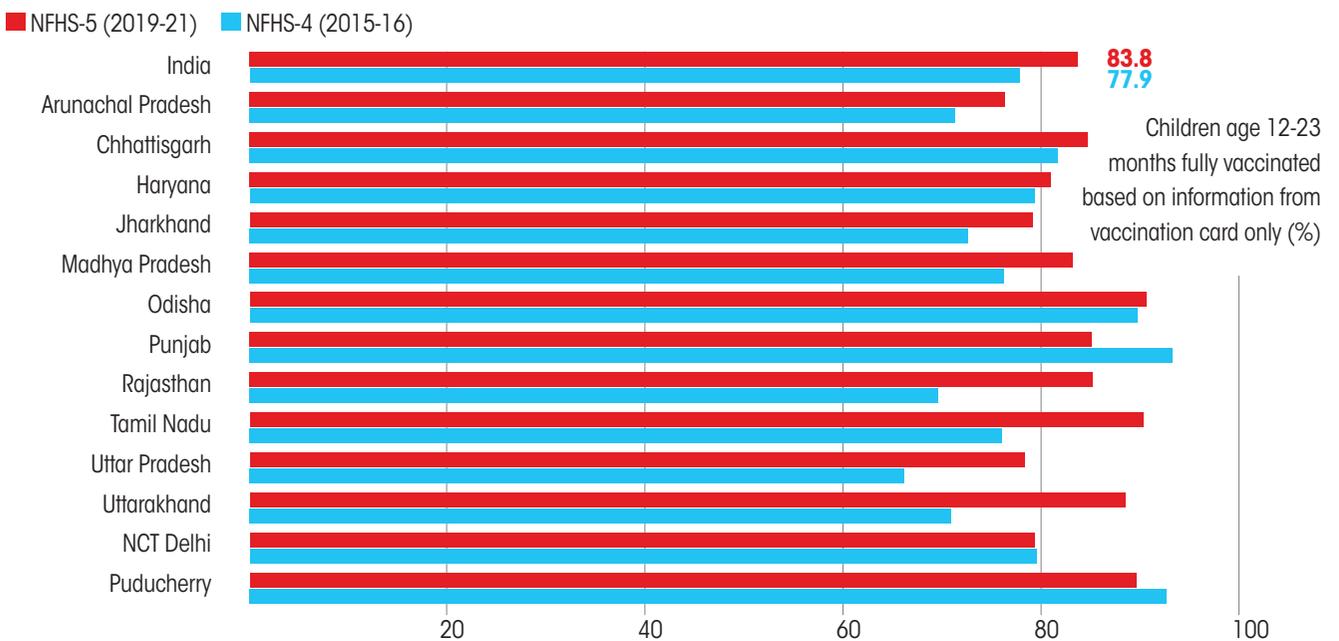

Overweight children

All states/UTs except Tamil Nadu have seen an increase in the number of overweight children

Fully vaccinated infants

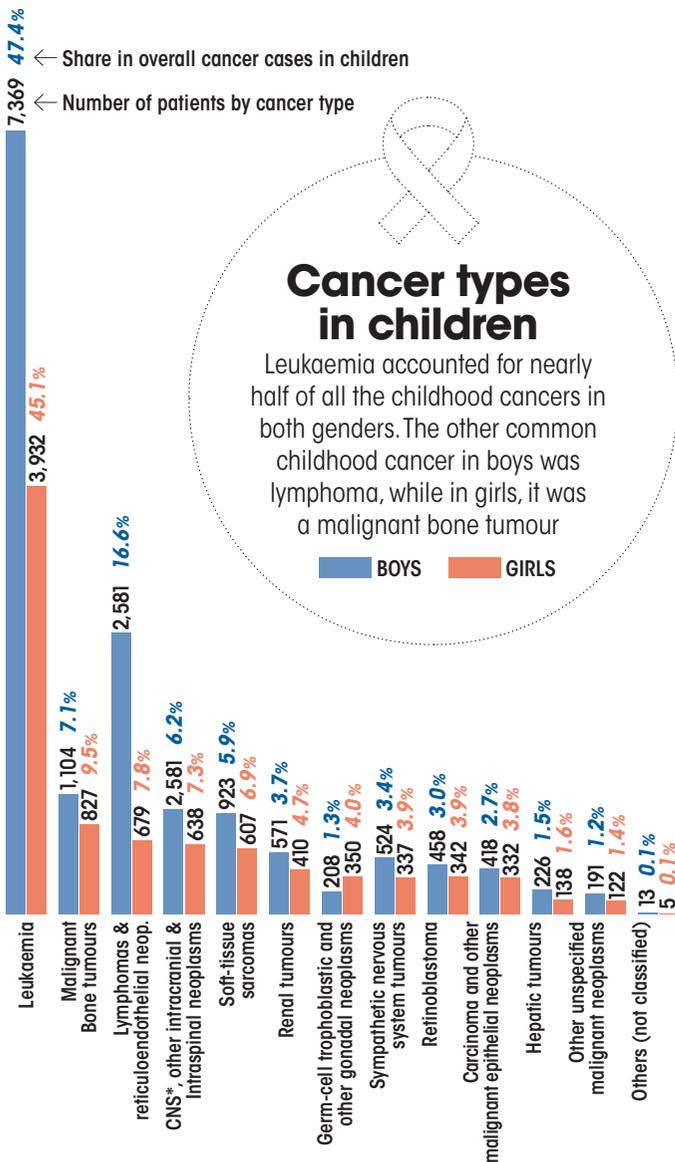

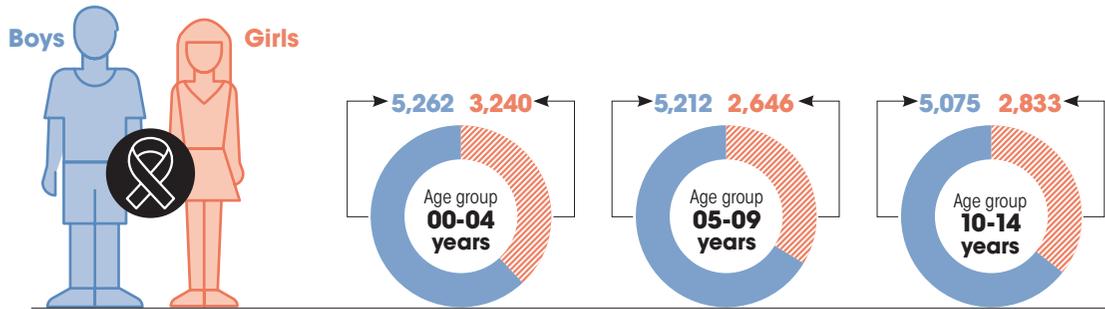

Arunachal Pradesh has the lowest vaccination coverage, followed by Uttar Pradesh and Jharkhand

Source: Phase-2 of the National Family Health Survey (NFHS-5), November 2021

Cancer in children

India reported 24,268 cancer cases in children (0-14 years) during 2012-19, which is 4% of total cancer cases

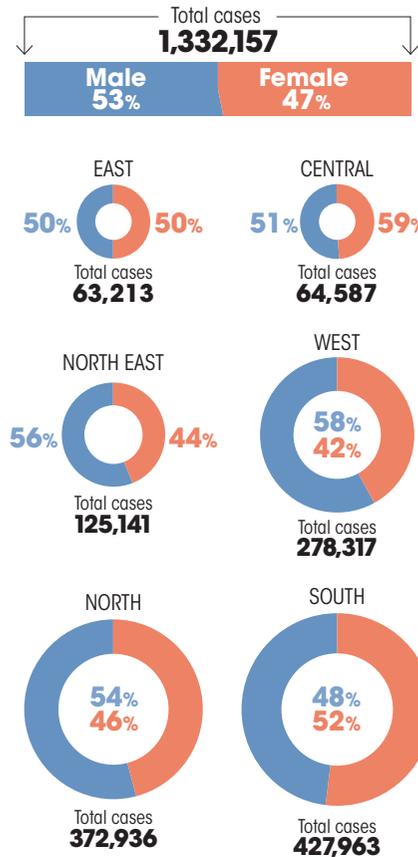

Cancer types in children

Leukaemia accounted for nearly half of all the childhood cancers in both genders. The other common childhood cancer in boys was lymphoma, while in girls, it was a malignant bone tumour

BOYS GIRLS

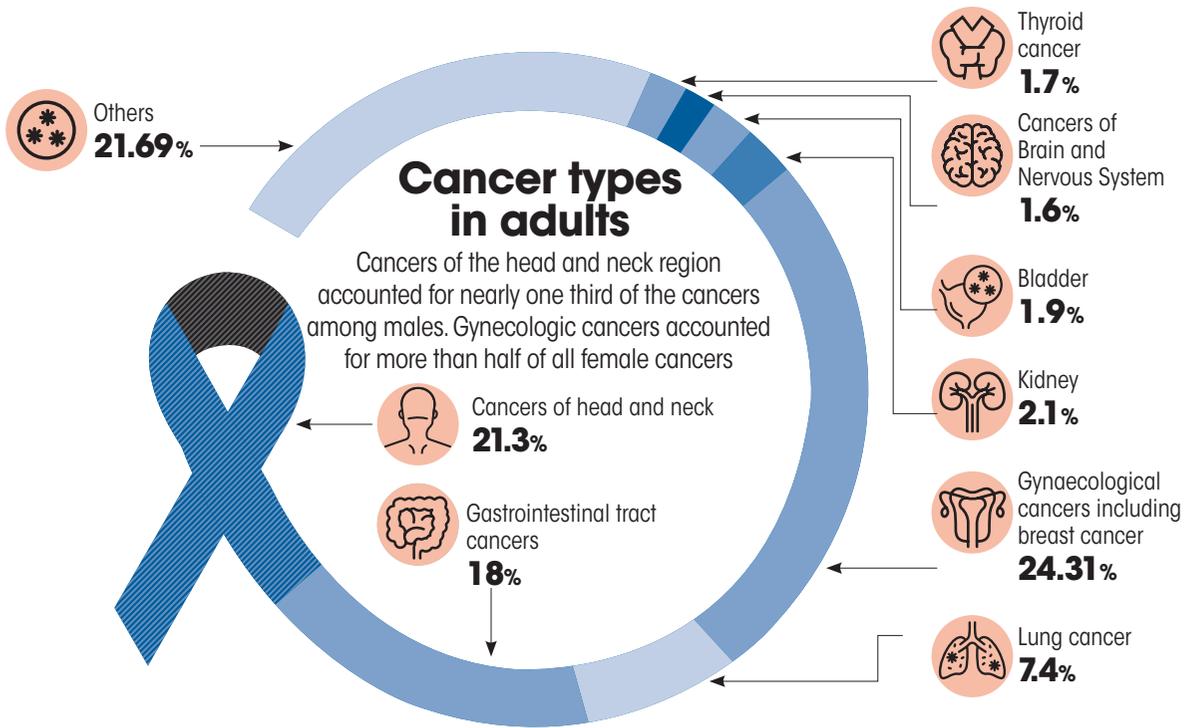

Cancer in adults

Almost 60 % of 1.33 million cancer cases registered during 2012-19 were from hospital-based cancer registries** in north and south India

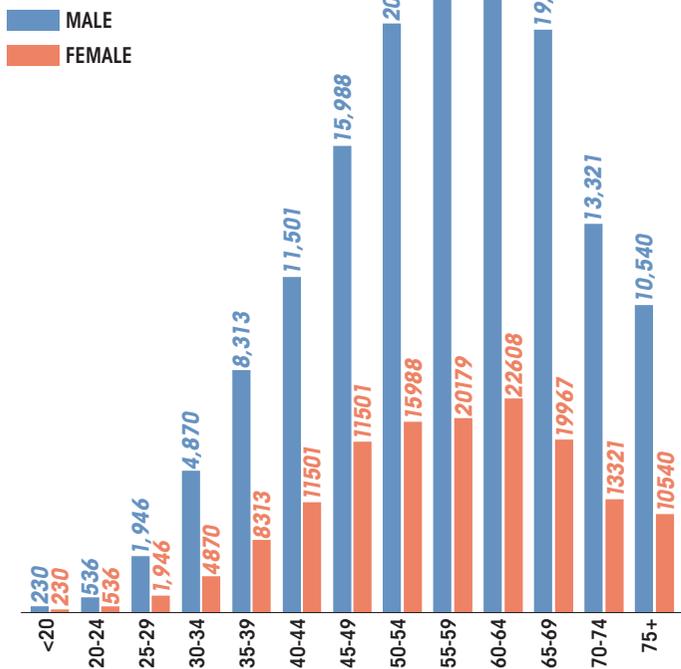

* Central nervous system; ** India uses 96 hospital-based cancer registries to collect data on all patients diagnosed and/or treated for cancer at a particular facility. Source: Clinicopathological Profile of Cancers in India: A Report of the Hospital Based Cancer Registries, 2021 by Indian Council of Medical Research

STATE OF HEALTH

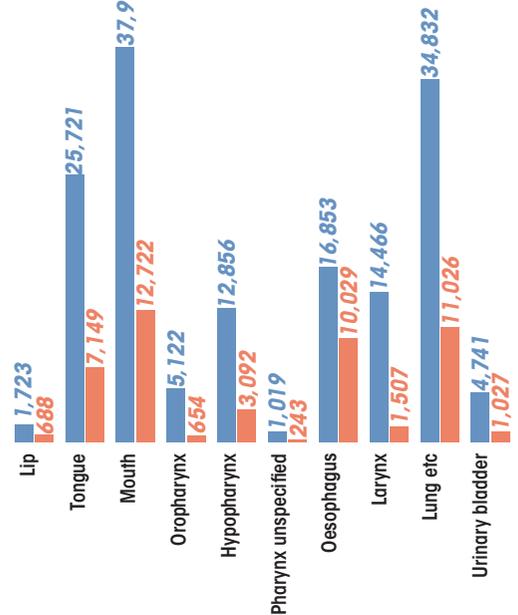

Tobacco use and cancer

Tobacco use is responsible for 48.7% of cancers among males and 16.5% among females

Cancer type by tobacco use

Mouth and lung are the most common types of cancer for people who consume tobacco

Source: Clinicopathological Profile of Cancers in India: A Report of the Hospital Based Cancer Registries, 2021 by Indian Council of Medical Research

STATE OF FOOD

HEALTHY DIETS

71% of Indians cannot afford a healthy diet.
The global average is 41%

FOOD INFLATION

In the past year, consumer food price index (CFPI) inflation rate
has seen a 327% increase

RURAL THRUST

Contrary to the general trend, food prices have increased at a higher rate
in rural areas than in urban areas in March and April 2022

Burden of poor diet

Despite some progress, diets are not getting healthier and make increasing demands on the environment, while unacceptable levels of malnutrition persist. The high human, environmental and economic costs of continuing our current trajectory are so significant that we will pay a far higher price if we fail to act. The global food system falls far short of achieving global goals for both health and the environment

42% of world cannot afford* a healthy diet

In India, 71% of population cannot afford a healthy diet

*A healthy diet is considered unaffordable when its cost exceeds 63% of a person's income.
Source: The State of Food and Agriculture, FAO, 2021

Deaths due to poor diet

More than 1.7 million Indians die due to diseases attributable to dietary risk factors and weight levels

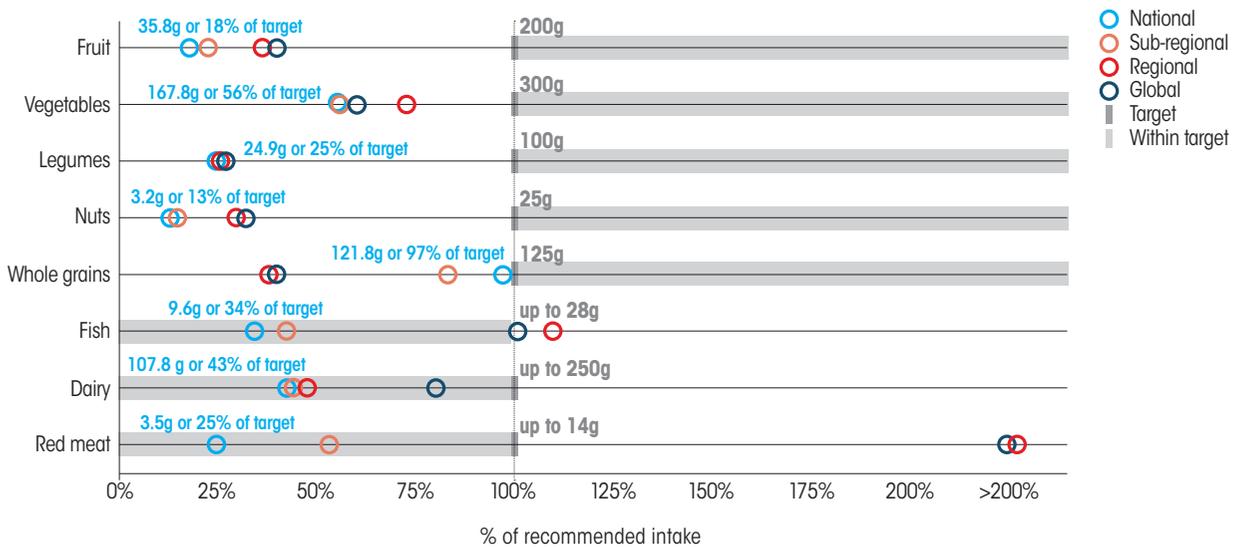

Deaths (in millions) attributable to dietary risk factors by cause of death, for risks related to dietary composition and weight levels. The combined risk is less than the sum of individual risks because individuals can be exposed to multiple risks, but mortality is ascribed to one risk and cause. 'All risk factors' includes all deaths associated with dietary composition (i.e. diets low in fruits, diets low in vegetables, diets low in wholegrains, diets high in processed meat, diets high in red meat, and diets high in sugary drinks) and all deaths associated with weight levels (i.e. underweight, overweight, obese).

Limited nutrition

The diet of an average Indian lacks in fruits, vegetables, legumes, nuts and whole grains. The consumption of fish, dairy and red meat is within target

Dietary intakes of key foods and nutrients in adults aged 20 years and above, compared against minimum and maximum targets

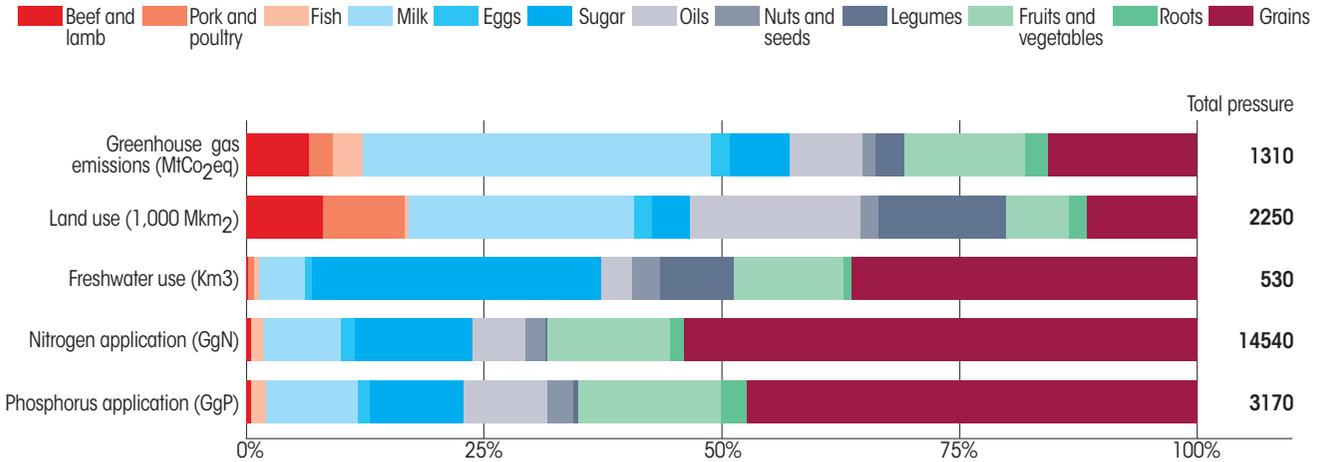

Recommended intake targets were determined by the EAT-Lancet Commission on healthy diets from sustainable food systems. This includes minimum recommended intakes of health promoting food groups (fruits, vegetables, legumes, nuts and wholegrains) and maximum recommended intakes of food groups with detrimental health and/or environmental impacts (red meat, dairy, and fish). Ideal intake for each food is within the shaded area of the graph.

Source: 2021 Global Nutrition Report

Environmental impacts of food systems

While milk production is responsible for the lion's share of GHGs and land use, grains account for the maximum share of freshwater use, nitrogen and phosphorous applications by food systems in India

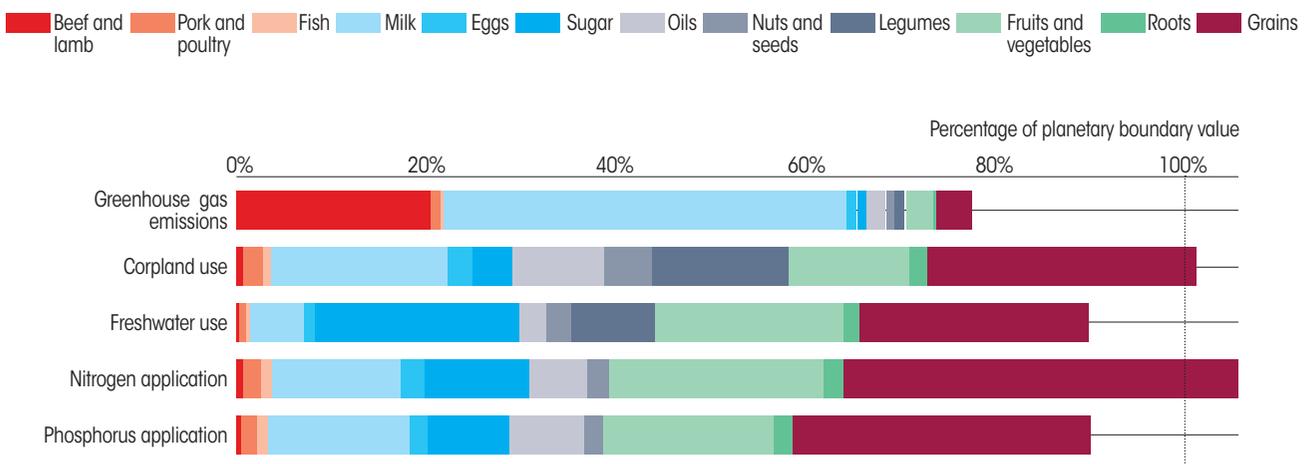

Pressure* from the food system on environmental factors as a percentage of total pressure

*The footprints take into account all food production, including inputs such as fertilisers and feed, transport, and processing, e.g., of oil seeds to oils and sugar crops to sugars. The displayed total pressure is in the units stated for each environmental domain and has been rounded to the nearest 10 units

Food system impact on planetary boundaries

India has already exceeded the safe levels of planetary boundaries# in terms of cropland use and nitrogen application

#Planetary boundaries define the threshold related to global environmental processes beyond which humanity should not go. Planetary boundaries align with the targets for sustainable food production as set out by the Sustainable Development Goals. If impacts exceed 100% of the planetary boundary, the dietary pattern of that particular country can be considered unsustainable in light of global environmental targets, and disproportionate in the context of an equitable distribution of environmental resources and mitigation efforts

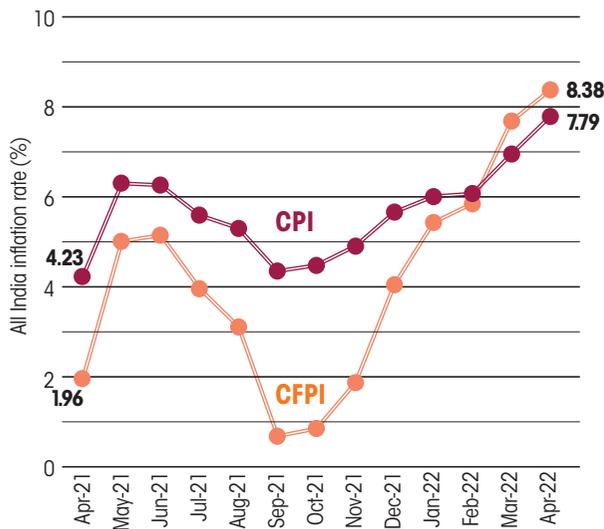

Source: 2021 Global Nutrition Report

Food inflation

India's consumer price index-based inflation in April 2022 climbed to an eight-year high of 7.79% due to an increase in edible oil and fuel prices. Retail inflation has stayed above the Reserve Bank of India's comfort zone of 6% for the fourth consecutive month

Food becomes dearer

In the past year, consumer food price index (CFPI) inflation has seen a 327% increase. Consumer price index (CPI), which includes CFPI, has seen an 84% increase

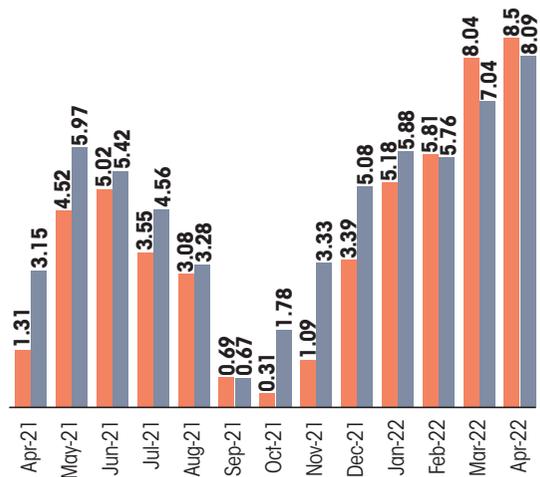

Rural thrust

Food prices have increased at a higher rate in rural areas than in urban areas in March and April 2022

All India inflation rate based on CFPI (%)

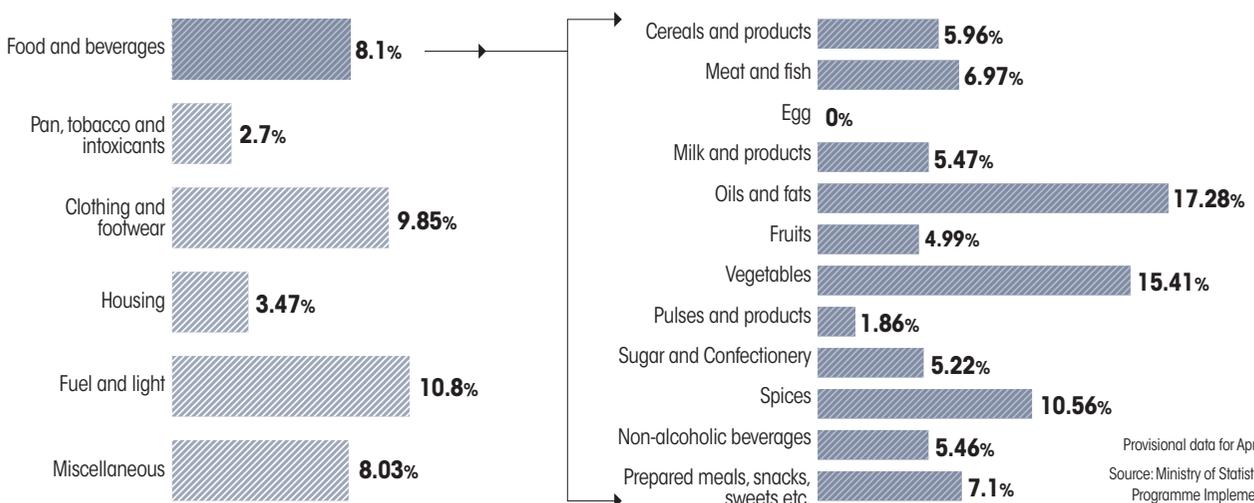

Rural Urban

Consumer Price Index (CPI) is a measure of the average change overtime in the prices paid by consumers for a basket of consumer goods and services with reference to a base year (2012). **Consumer Food Price Index (CFPI)** is a measure of change in retail prices of food products consumed by a defined population group

Year-on-year inflation rates (%) for April 2022

Food, weighted at 39%, is the biggest mover of CPI inflation. The current high levels of food inflation have been driven by the rising cost of production, surging international crop prices and extreme weather-related disruptions, as per research firm CRISIL

Provisional data for April 2022

Source: Ministry of Statistics and Programme Implementation

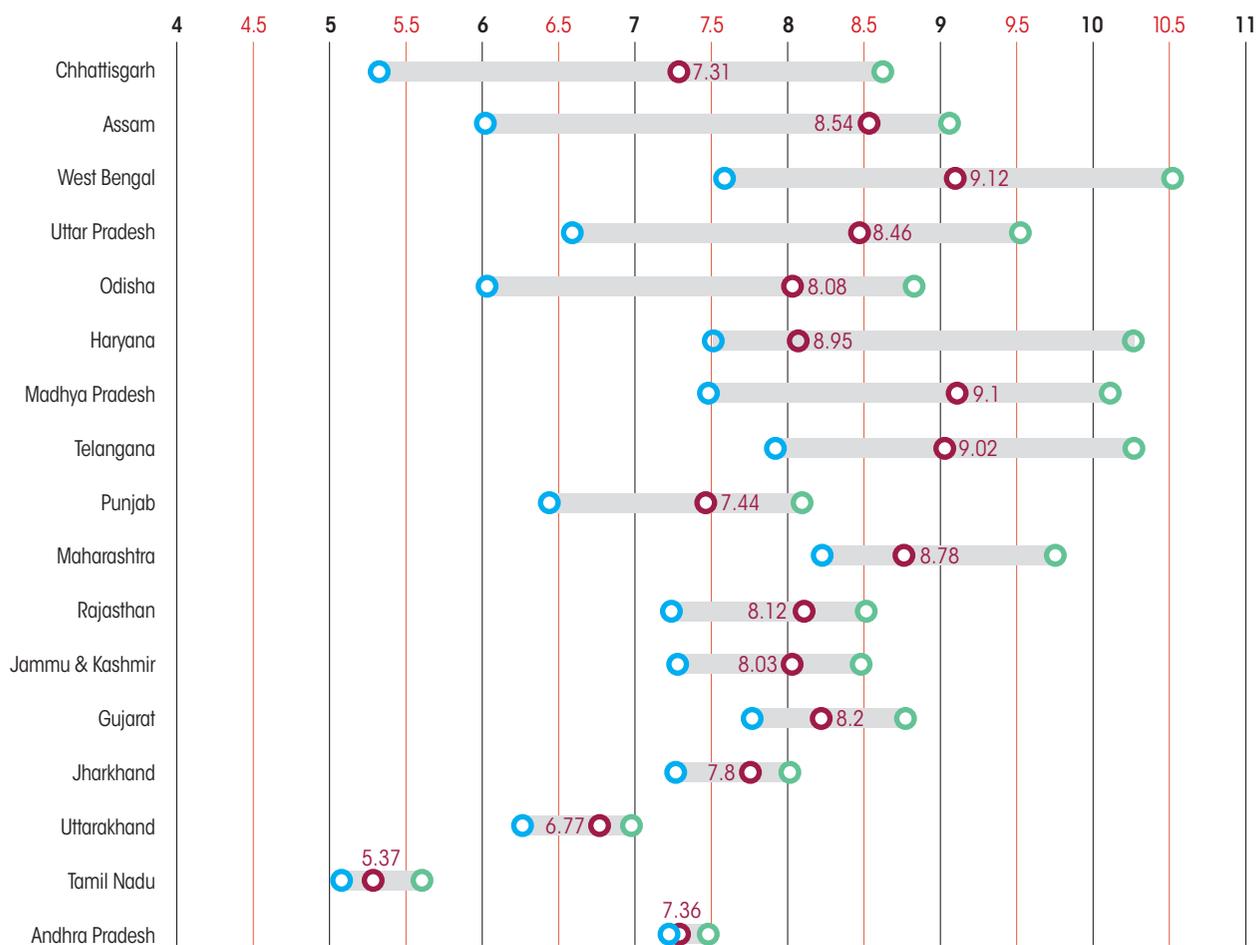

State-wise retail inflation

West Bengal, Madhya Pradesh and Telangana recorded more than 9% inflation rate in April 2022. Haryana, Maharashtra, Assam, Uttar Pradesh, Gujarat, Rajasthan, Odisha and Jammu & Kashmir recorded 8-9% inflation

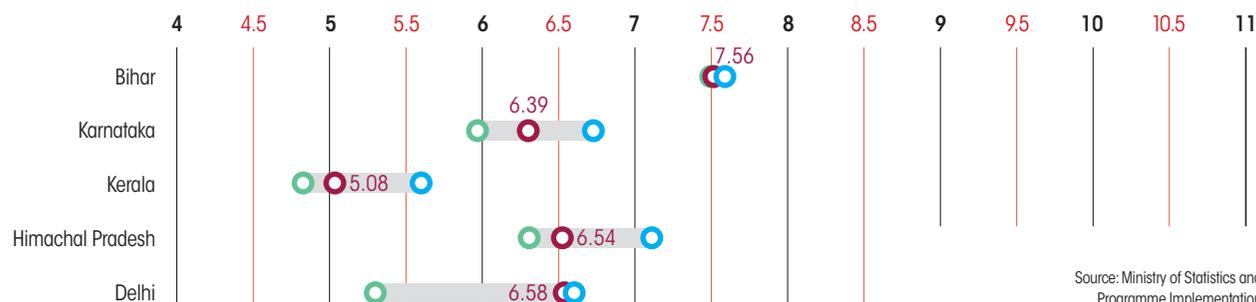

Major state/UT wise year-on-year inflation rates (%) for April 2022

● Rural ● Urban ● Combined

17 states where rural inflation is higher than urban

5 states where urban inflation is higher than rural

Payment delays in MGNREGA

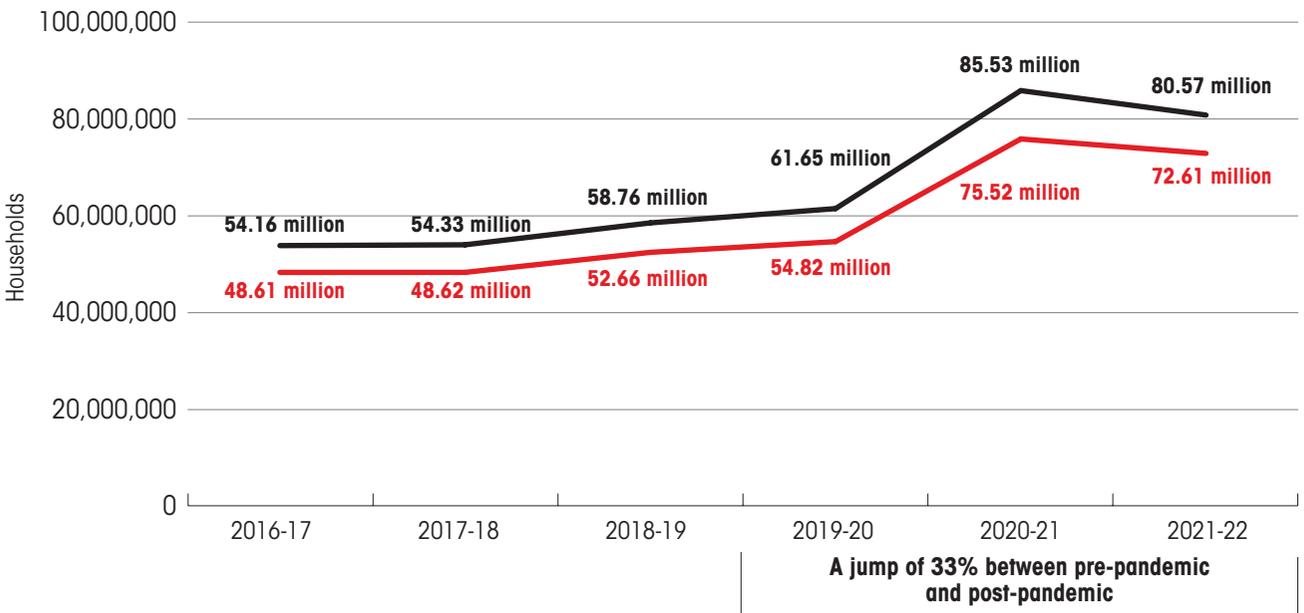

Of the 138 million rural households, 80.5 million—or close to 60%—households demanded employment under the Mahatma Gandhi National Rural Employment Guarantee Act in 2021-22, suggesting that the demand spike that started with the pandemic continues. The demand-driven scheme provided employment to 90% of the households.

While payment delays remained the lowest in the past five years, a worrying 25% of the delays were more than three months. Just five states— Nagaland, Manipur, Arunachal Pradesh, Bihar and Uttar Pradesh—accounted for 96% of the delays by more than three months

STATE OF CLIMATE

RISING MERCURY

An unusually warm winter and post-monsoon seasons made 2021 India's fifth warmest year on record

HEATWAVES

India recorded 280 heatwave days between March and May 2022, which is the highest in the past 12 years

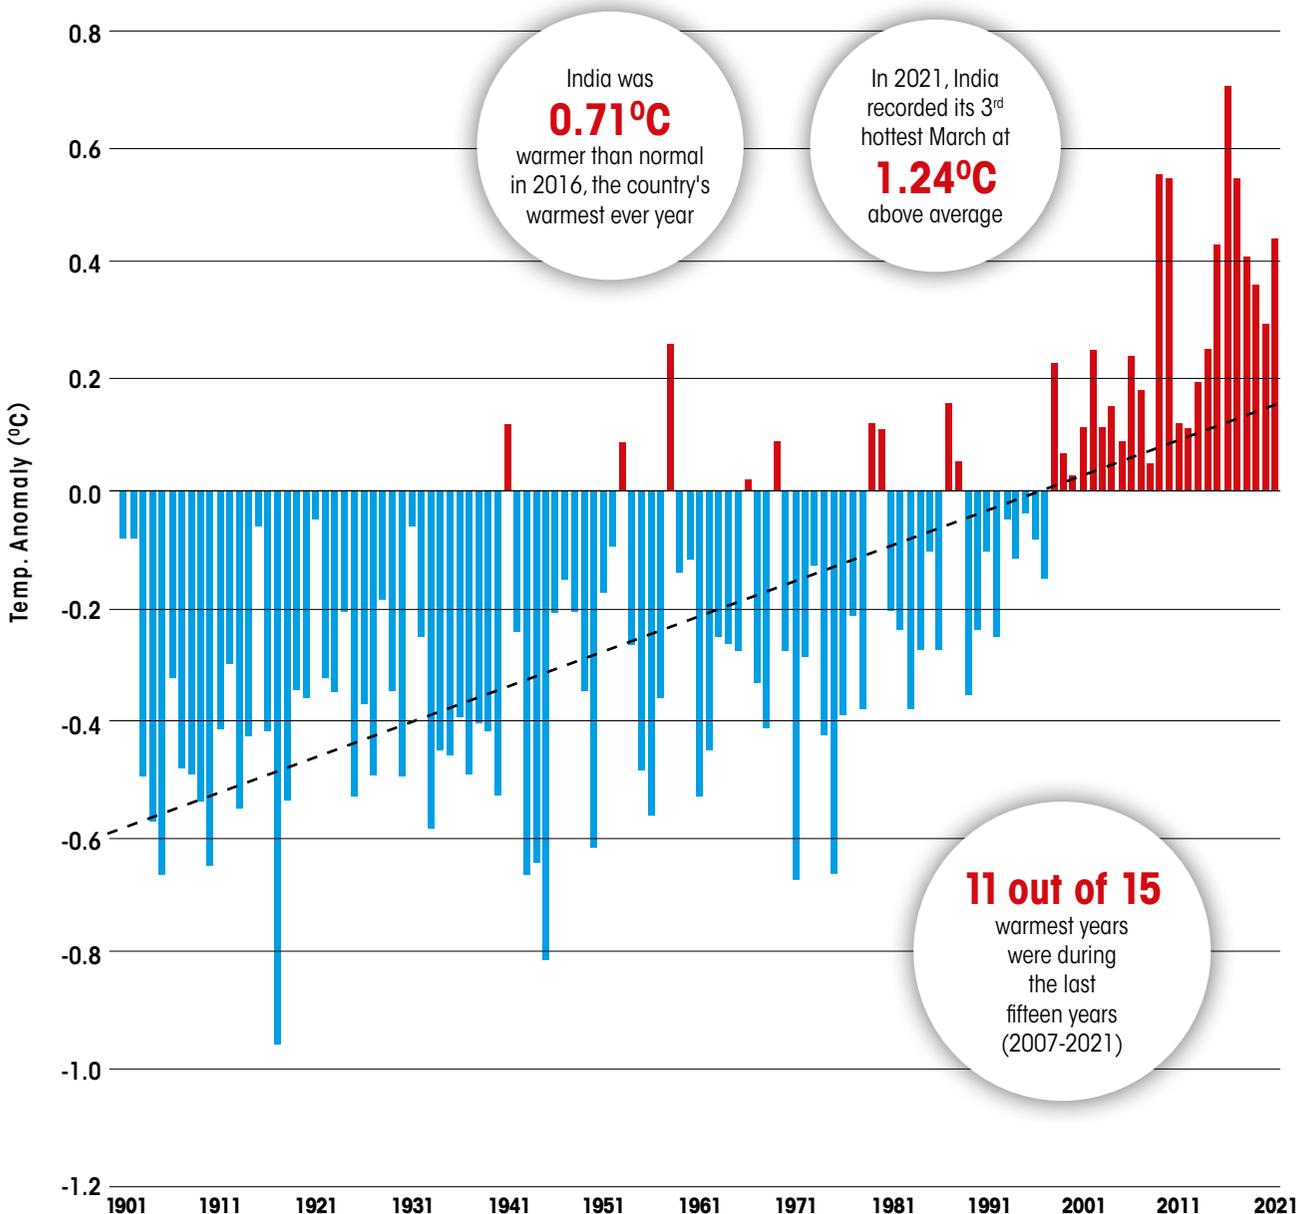

GOVERNMENT EXPENDITURE

24 states/UTs have reduced their spending on natural calamities between 2021-22 and 2020-21

Rising mercury

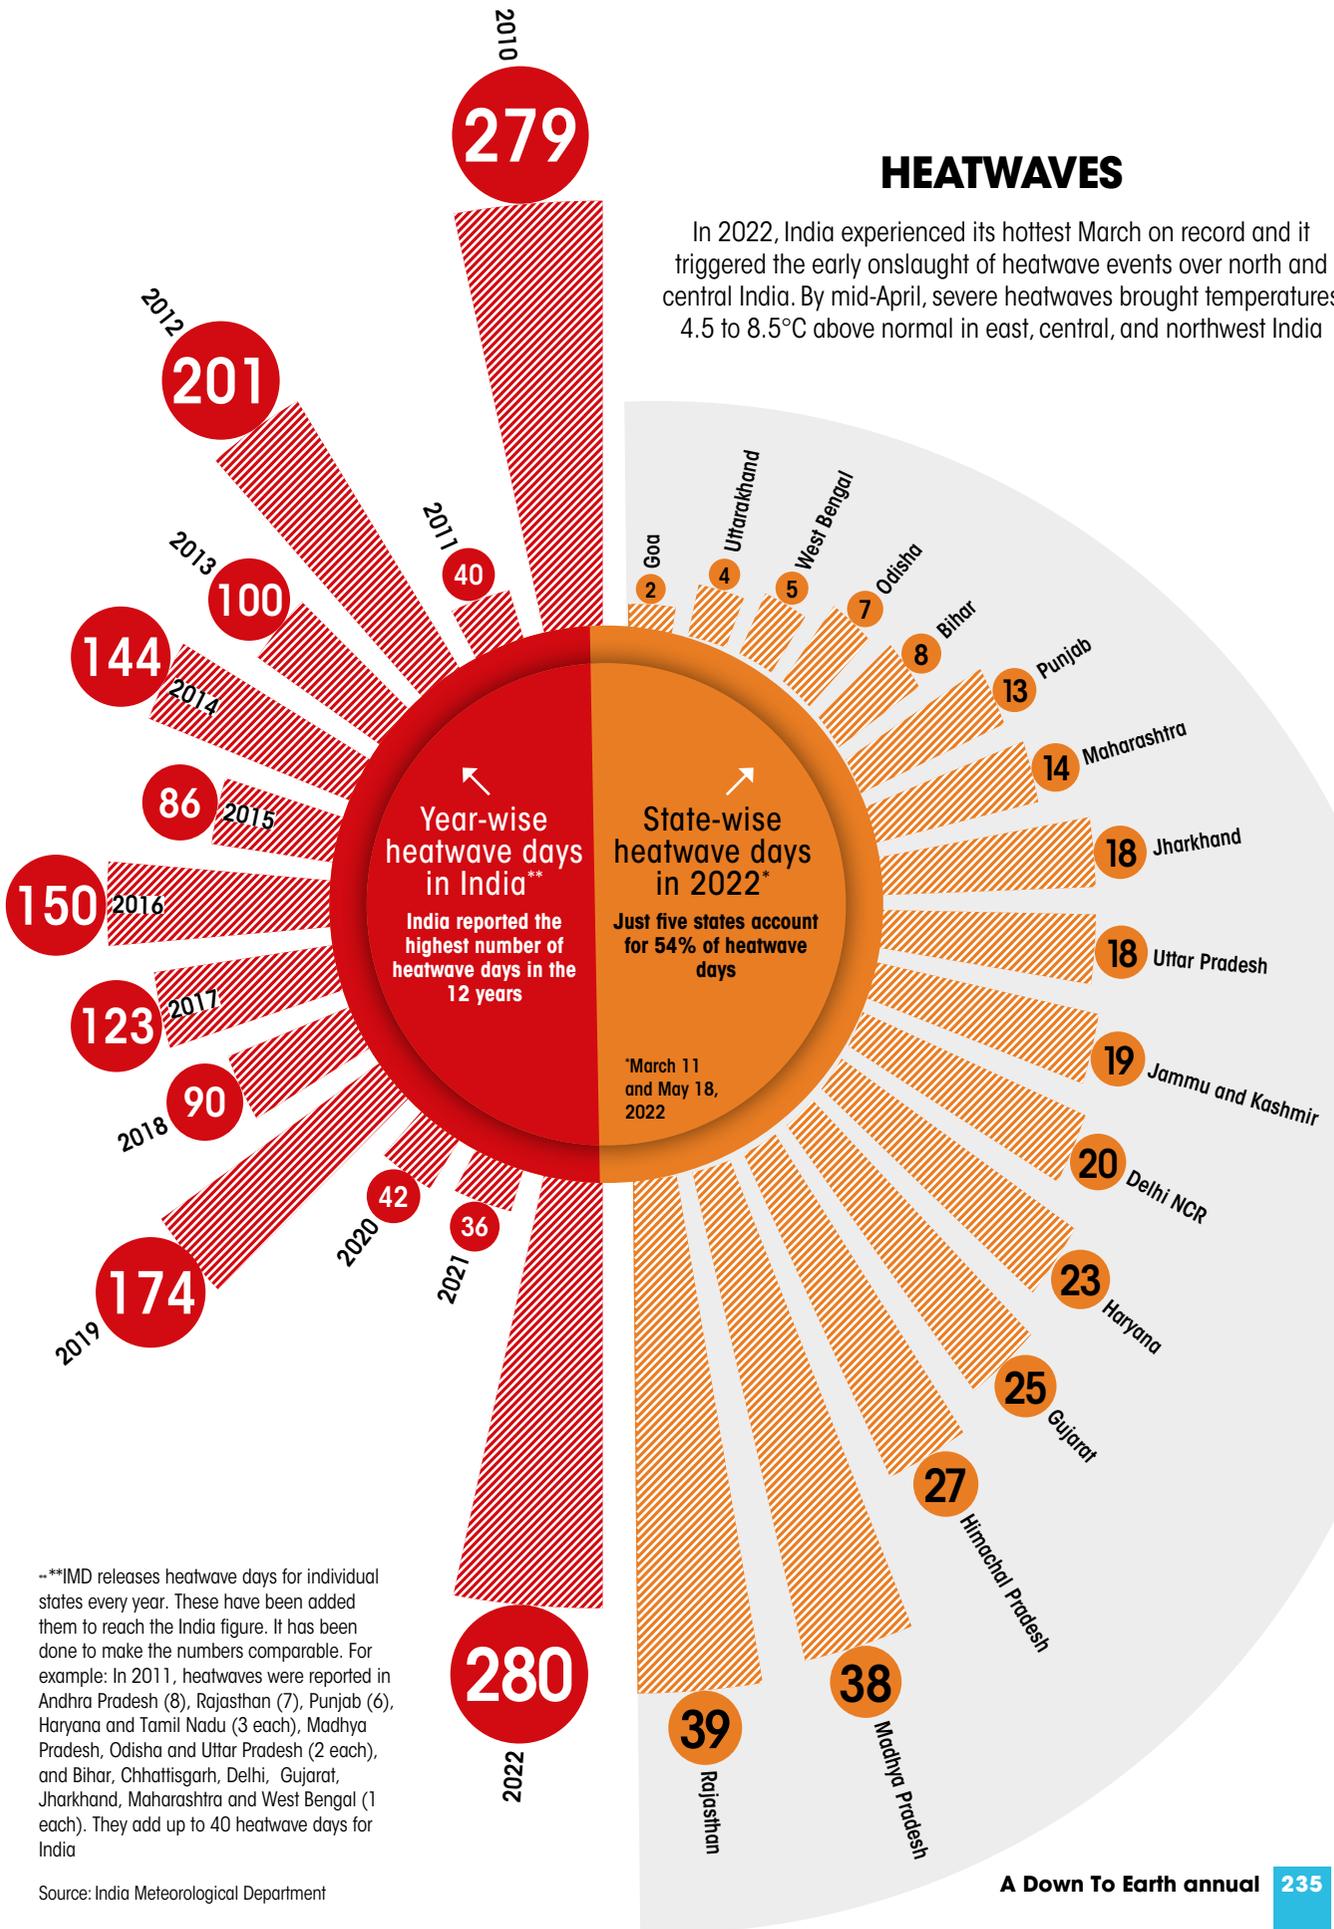

India recorded its fifth warmest year in 2021 when the average temperature remained 0.44°C above normal (1981–2010 average). This was due to an unusually warm winter (+0.78°C in January and February) and post-monsoon season (+0.42°C in January and February). The other two seasons were also warmer than normal. The pre-monsoon season (March to May) was 0.35°C above average, and the monsoon season (June to September) was 0.34°C above average. The past decade (2011–2020/2012–2021) was India's warmest decade on record. The country's average annual mean temperature during 1901–2021 showed an increasing trend of 0.63°C/100 years with a significant increasing trend in maximum temperature (0.99°C/100 years) and a relatively lower increasing trend (0.26°C/100 years) in minimum temperature.

Source: India Meteorological Department

HEATWAVES

In 2022, India experienced its hottest March on record and it triggered the early onslaught of heatwave events over north and central India. By mid-April, severe heatwaves brought temperatures 4.5 to 8.5°C above normal in east, central, and northwest India

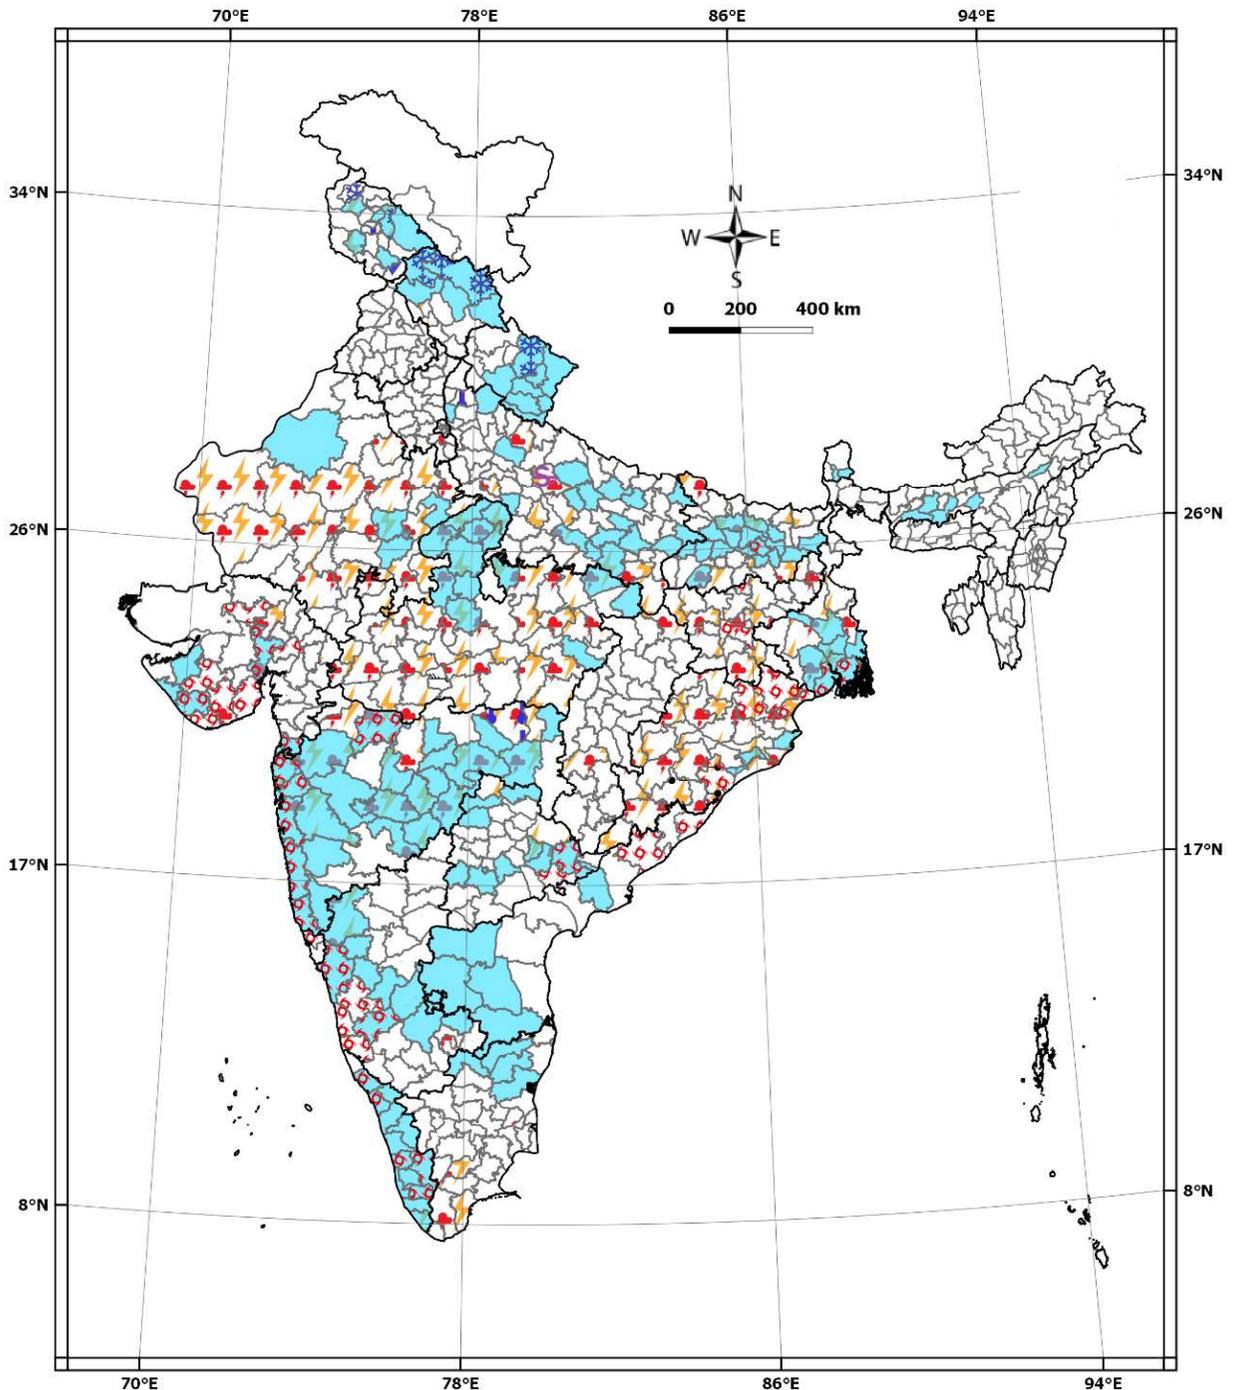

--**IMD releases heatwave days for individual states every year. These have been added them to reach the India figure. It has been done to make the numbers comparable. For example: In 2011, heatwaves were reported in Andhra Pradesh (8), Rajasthan (7), Punjab (6), Haryana and Tamil Nadu (3 each), Madhya Pradesh, Odisha and Uttar Pradesh (2 each), and Bihar, Chhattisgarh, Delhi, Gujarat, Jharkhand, Maharashtra and West Bengal (1 each). They add up to 40 heatwave days for India

EXTREME WEATHER EVENTS

At least 1,750 people died due to extreme weather events in 2021. Bulk of the deaths were due to lightning and thunderstorms, and floods, heavy rainfall and landslides

- Heavy rain, flood and landslide
- ⚡ Lightning and thunderstorm
- ❄ Cold wave
- ☄ Gale
- ☄ Duststorm
- ▼ Hailstorm

STATE OF CITIES

URBAN SPACES

Chennai is the only capital city to feature in the top 5 of the urban index that is based on 14 socio-economic indicators

HEALTH INSURANCE COVERAGE

In 47 of the 56 assessed cities, less than half of the households are without any member covered under health scheme/ insurance

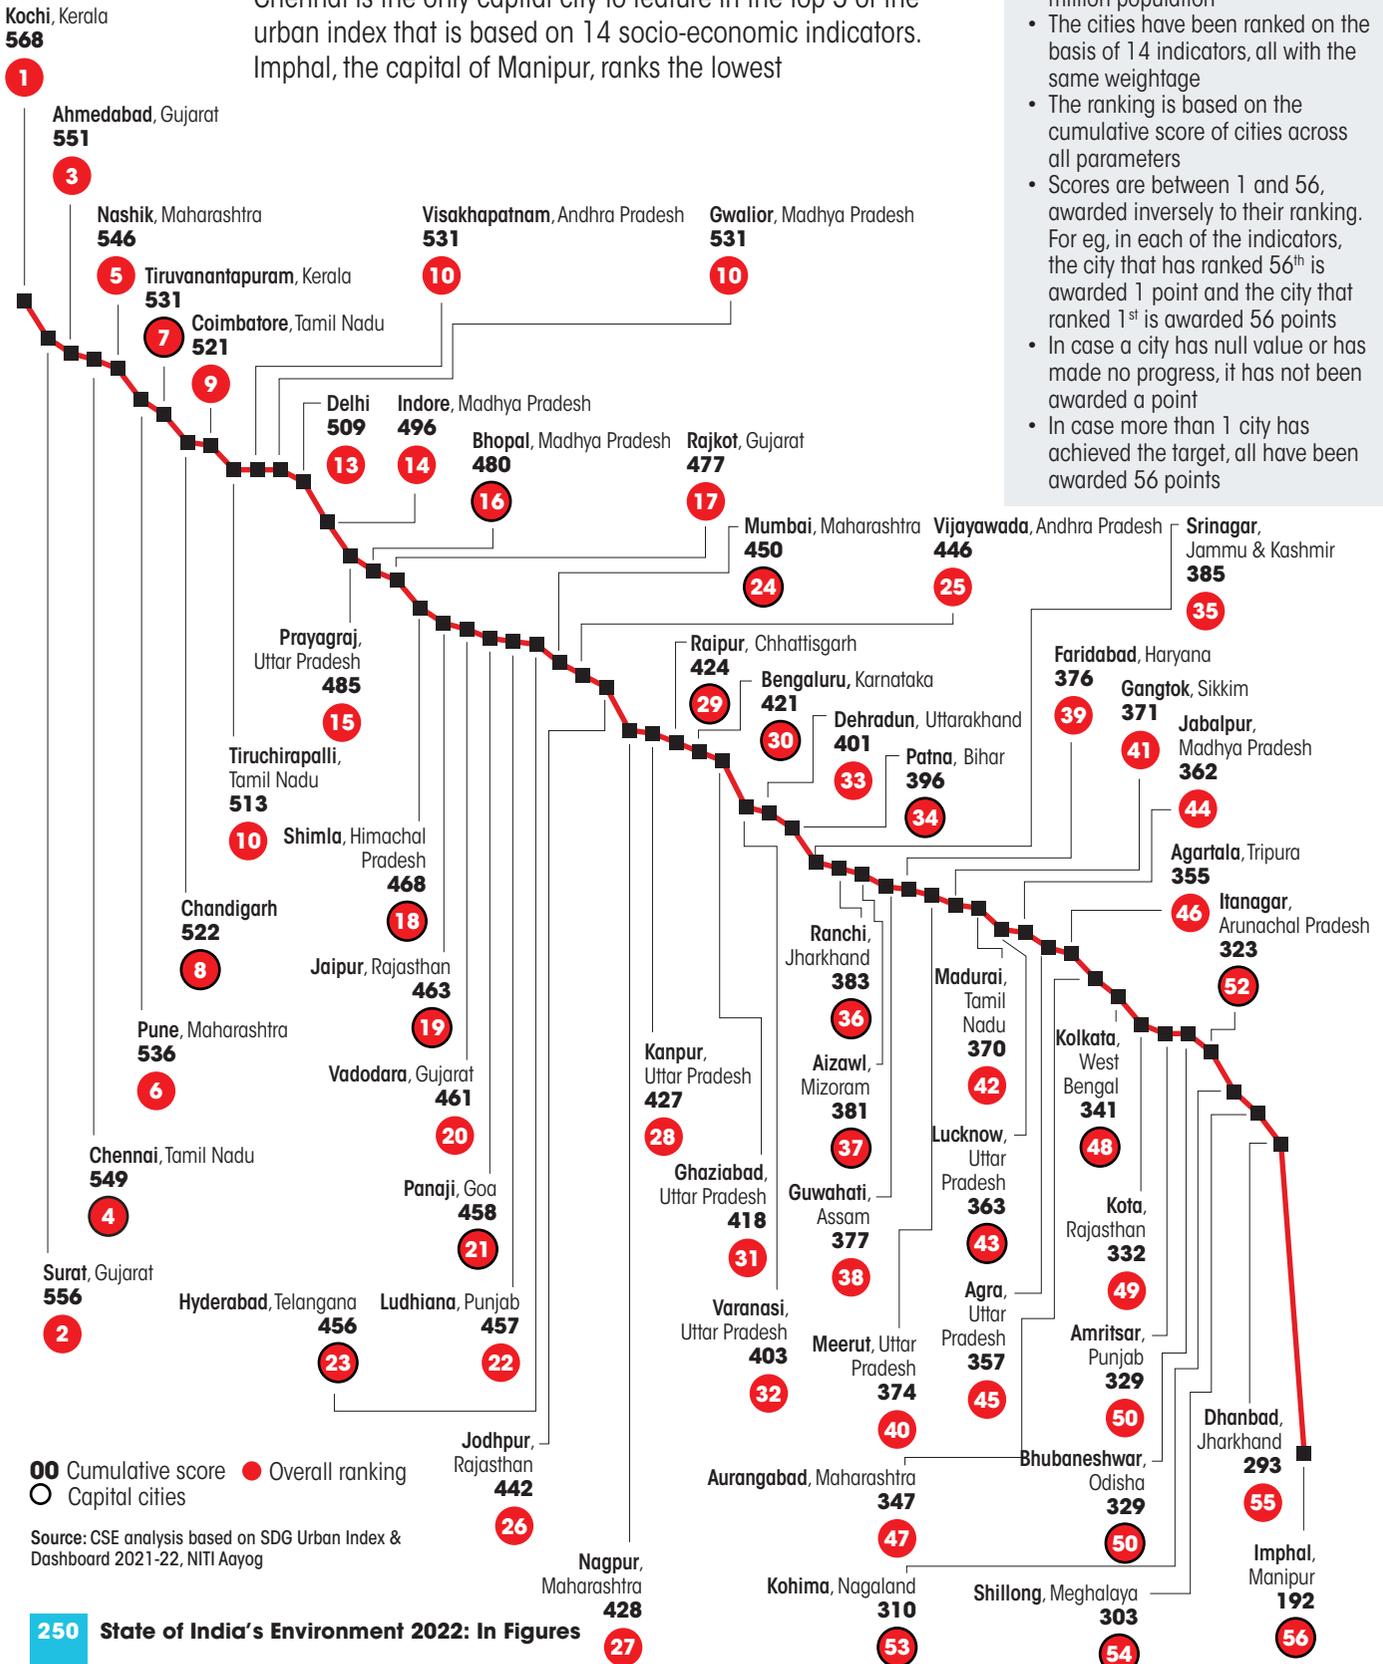

POPULATION IN SLUMS

In 16 cities, 25% of the residents live in slums. This includes six capital cities

Capital problem

Chennai is the only capital city to feature in the top 5 of the urban index that is based on 14 socio-economic indicators. Imphal, the capital of Manipur, ranks the lowest

How cities were ranked

- The ranking consists of 56 cities: 44 million-plus cities and 12 capital cities with less than a million population
- The cities have been ranked on the basis of 14 indicators, all with the same weightage
- The ranking is based on the cumulative score of cities across all parameters
- Scores are between 1 and 56, awarded inversely to their ranking. For eg, in each of the indicators, the city that has ranked 56th is awarded 1 point and the city that ranked 1st is awarded 56 points
- In case a city has null value or has made no progress, it has not been awarded a point
- In case more than 1 city has achieved the target, all have been awarded 56 points

00 Cumulative score ● Overall ranking

STATE OF WASTE

HAZARDOUS WASTE

More than 36% of hazardous industries did not submit their waste generation information to state pollution control boards in 2020-21

E-WASTE

India's e-waste generation has increased by over 30% between 2018-19 and 2019-20

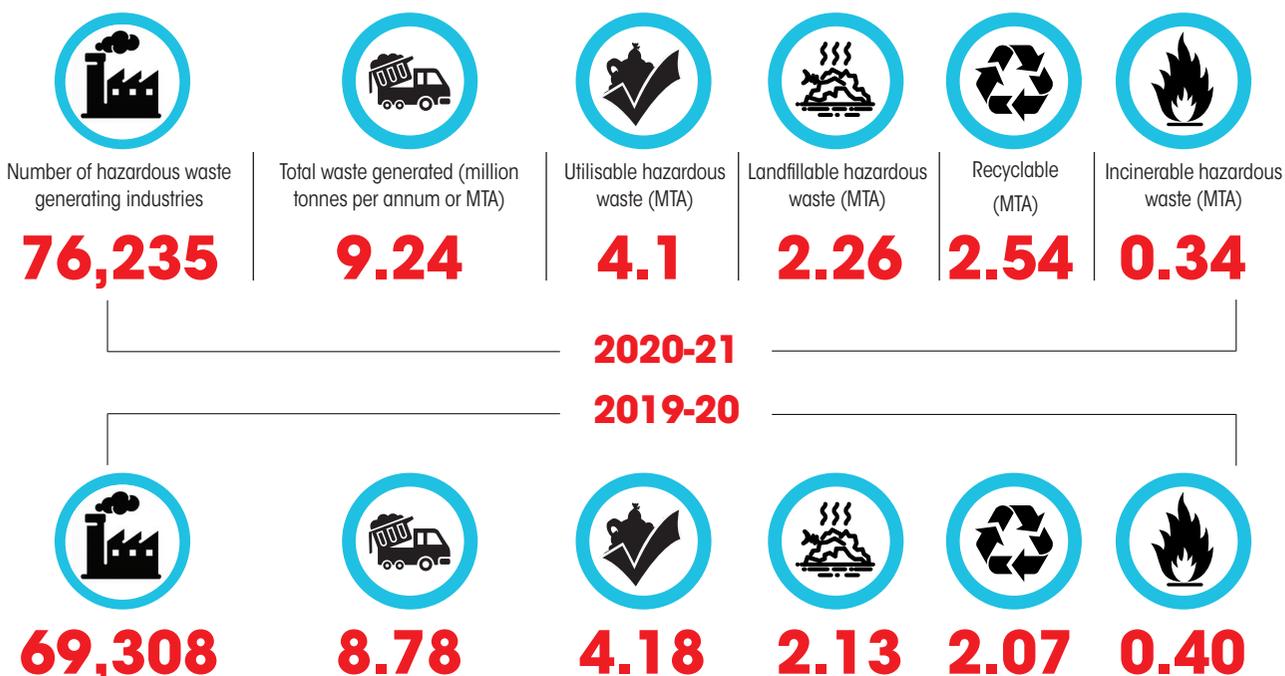

PLASTIC WASTE

India recycled 12% and burnt 20% of the 3.5 million tonnes of plastic waste it generated in 2019-20. It has no information on the remaining waste

HAZARDOUS WASTE

The number of hazardous industries and the waste they generate have gone up between 2019–20 and 2020–21. There is also a glaring data gap with the state pollution control boards of only four northeastern states—Arunachal Pradesh, Nagaland, Sikkim, and Tripura—receiving annual numbers from all their industries

What is hazardous waste

Any waste that can cause harm to human health or the environment, whether alone or in contact with other wastes or substances. India's first regulation on the handling and management of hazardous waste was enacted in 1989 under the Environment (Protection) Act, 1986, in which the roles of hazardous waste generators and various agencies were laid down. These rules have been amended in 2003, 2008, and 2016

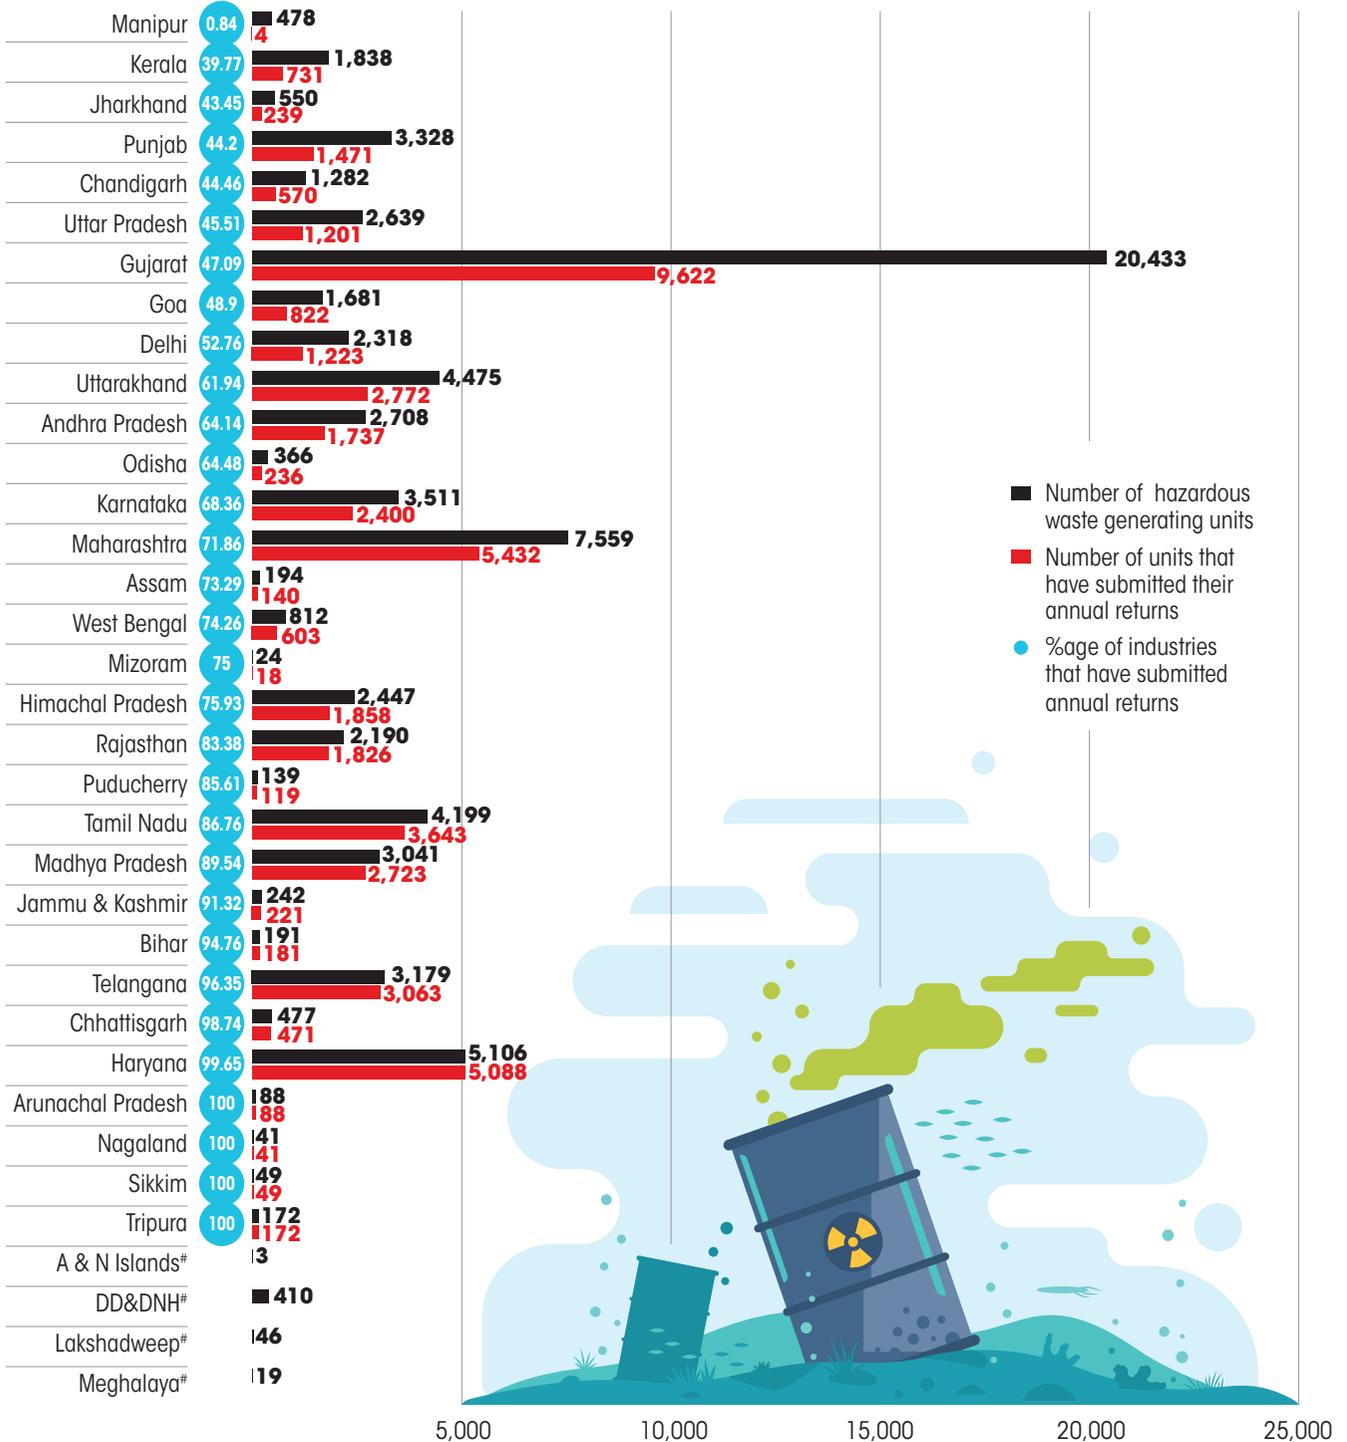

India imported 0.15 million tonnes and exported 0.003 million tonnes of hazardous waste in 2019-20

	Quantity Imported (tonnes)	Quantity Exported (tonnes)	Quantity of imported HW Recycled/ Utilized (tonnes)
Andhra Pradesh	44,870.12	0.00	121,814.58

PARTIAL NUMBERS

Of the 76,235 hazardous waste generating units in the country, only 48,764 have submitted annual returns, which include information on waste generation. Besides Bihar and Mizoram, pollution control boards in other states have no information about the actions they have taken against erring industries

* Annual inventory not submitted

E-waste

While electronic waste is rapidly increasing in India, the Central Pollution Control Board (CPCB), responsible for implementing the rules, is relying on partial data to address the problem

Rapid growth

India's e-waste generation has increased by over 30% between 2018-19 and 2019-20

Under the E-Waste (Management) Rules, 2016, twenty-one types of electrical and electronic equipment have been notified for fulfilling extended producer responsibility obligations. However, little data is available to understand its impact on the ground. The country does not have a state-level registry of EEE production, or database of authorised e-waste collection capacity.

Jumbled up

Government data suggests that while the lone collection centre in Andhra Pradesh has no authorised capacity, West Bengal, which also has one centre, accounts for 96% of the authorised capacity

	Number of authorised e-waste collection centres	Authorised capacity (tonnes)	Quantity of waste received at collection centres (tonnes)	Hazardous waste stored at collection centres (tonnes) at the beginning of the financial year	Hazardous waste stored at collection centres (tonnes) at the end of financial year
Andhra Pradesh	1	0	3.48	4.60	4.82

Plastic waste

Plastics are a production, consumption and waste management issue. The problem begins with the extraction of fossil fuel (oil, gas and coal), which is then refined into intermediate chemicals used to make polymers. The polymers are then sold by petrochemical companies to producers who work with end users like brand owners to make different kinds of plastics, which when discarded end up in the municipal solid waste stream. The country, like the rest of the world, has to urgently arrest the current production and consumption patterns, along with effective waste handling, to contain the problem

Private thrust

India has a cumulative petrochemicals production capacity of almost 29.1 million tonnes per annum (MTA). Of this, 17 million tonnes or 58% or is used to manufacture plastics. It is driven by five private players, who have almost thrice the production capacity compared to the seven public sector undertakings (PSUs) and joint ventures (JVs)

India's plastic waste drivers

Multi-layered plastics, which are non-recyclable at a commercial scale, make up 35% of all plastic waste, and 40% of all branded plastic waste

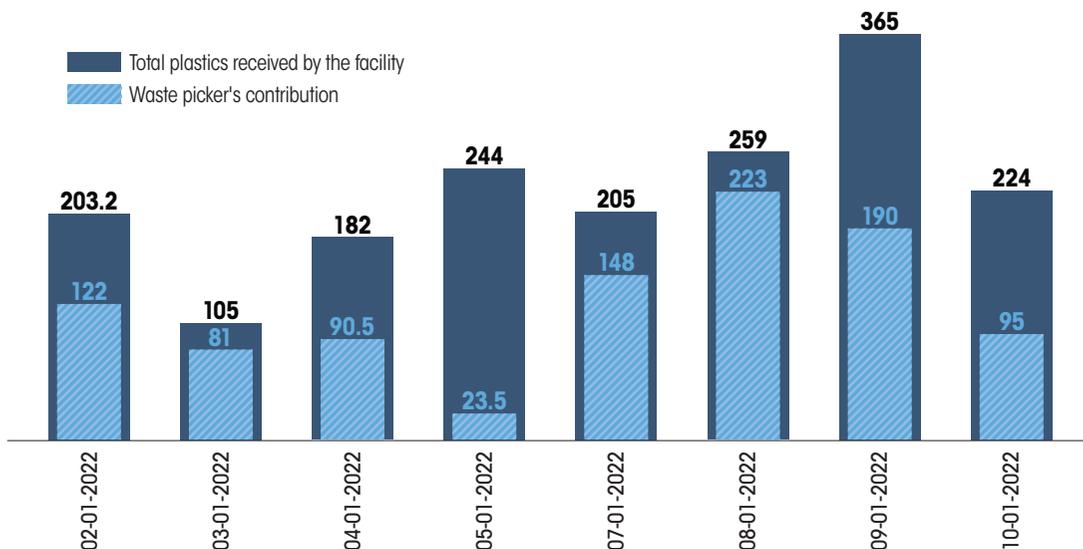

Types of plastics and their share in total plastics waste in India

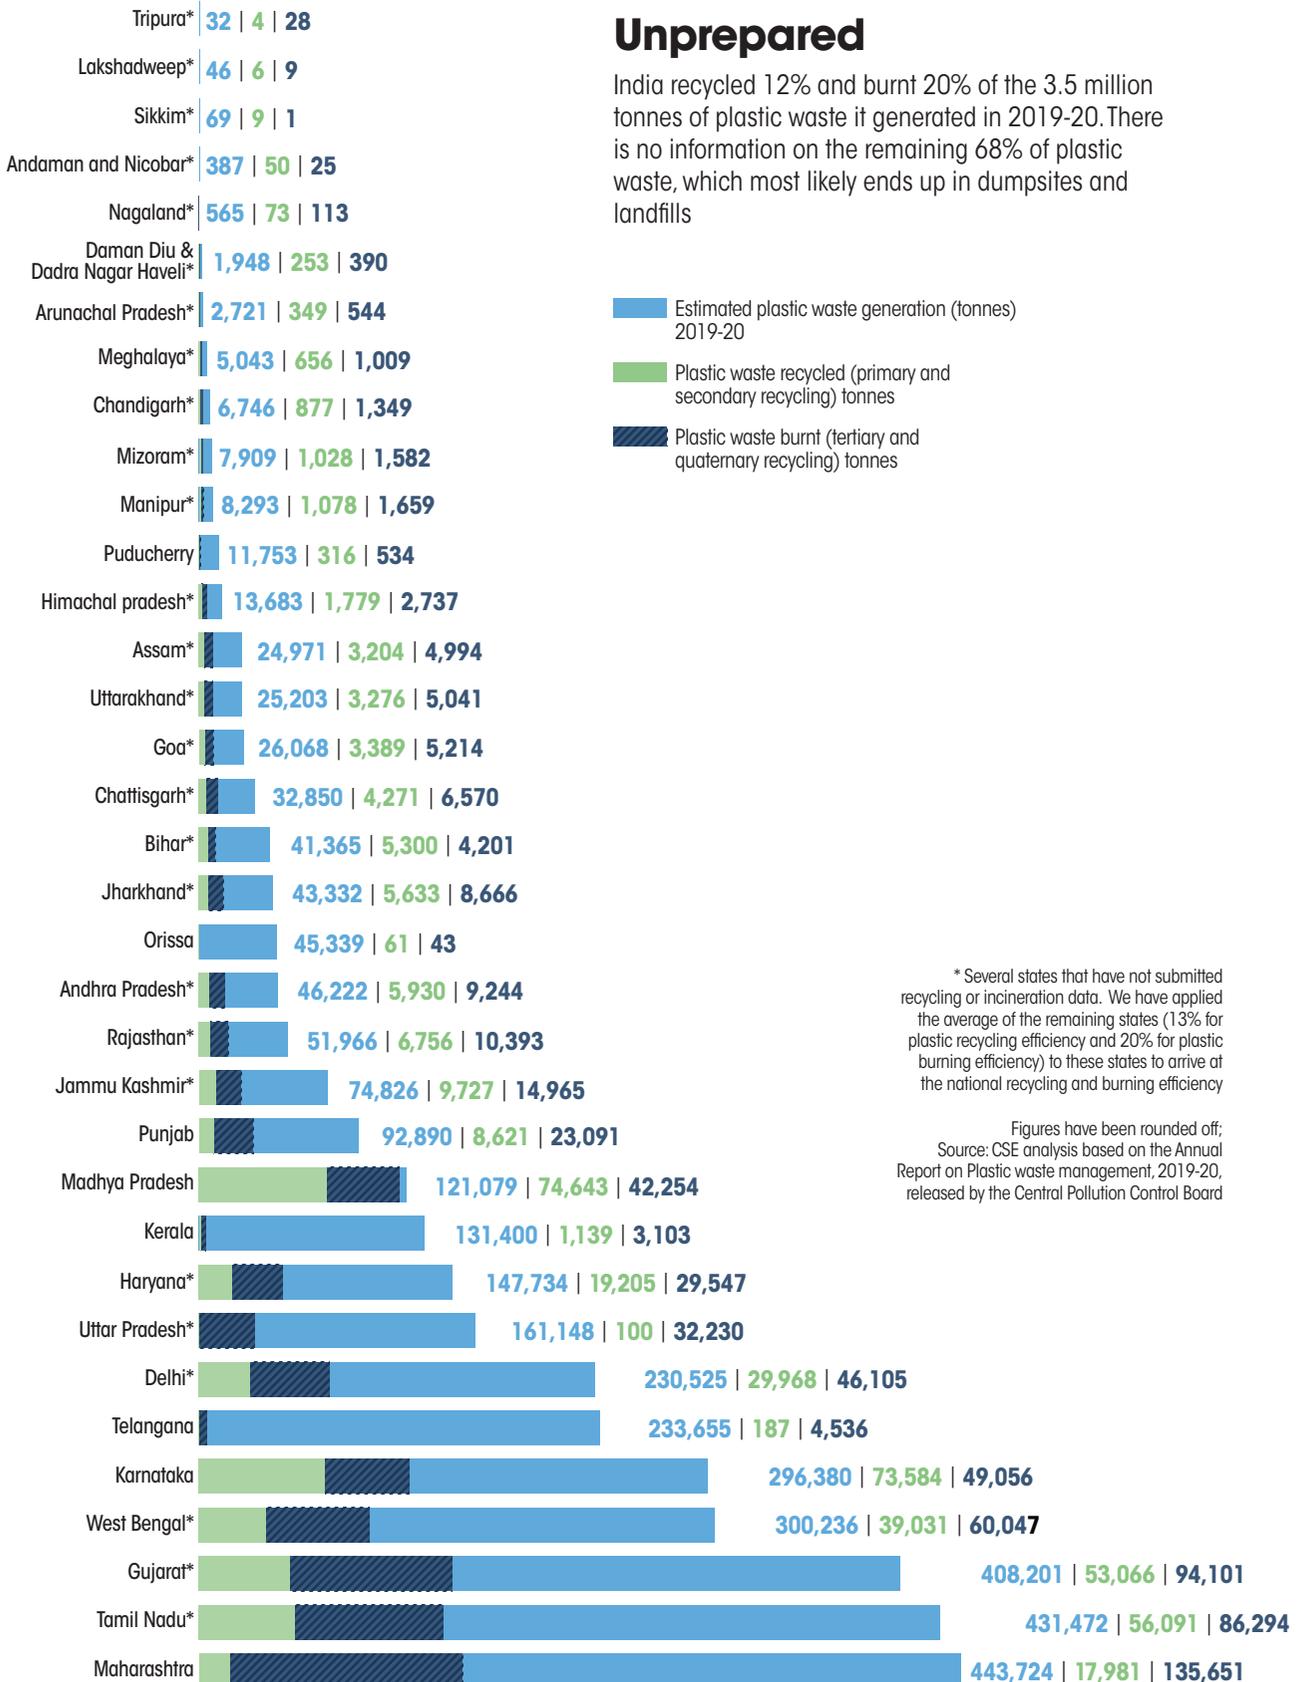

Source: Break Free From Plastic and Kagad Kach Patra Kashtakari Panchayat, a cooperative of waste pickers

Informal push

Waste pickers are responsible for 42-86%* of plastic waste diverted to material recovery facility

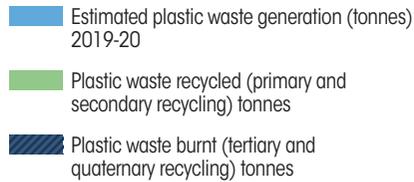

* CSE analysis based on a week-long data shared by material recovery facility operated by Parisar Bhagini Vikas Sangh in Mumbai, Maharashtra

Unprepared

India recycled 12% and burnt 20% of the 3.5 million tonnes of plastic waste it generated in 2019-20. There is no information on the remaining 68% of plastic waste, which most likely ends up in dumpsites and landfills

* Several states that have not submitted recycling or incineration data. We have applied the average of the remaining states (13% for plastic recycling efficiency and 20% for plastic burning efficiency) to these states to arrive at the national recycling and burning efficiency

Figures have been rounded off; Source: CSE analysis based on the Annual Report on Plastic waste management, 2019-20, released by the Central Pollution Control Board

With the potential onset of the third wave, it is important to prioritise a separate collection of infectious and highly infectious waste in urban solid waste management system

STATE OF AIR

POLLUTION AND LIFE EXPECTANCY

India, Nepal and Bangladesh are the only three countries in the world where the average life expectancy will increase by 5 years if they reduce their air pollution levels (PM 2.5) to WHO guidelines

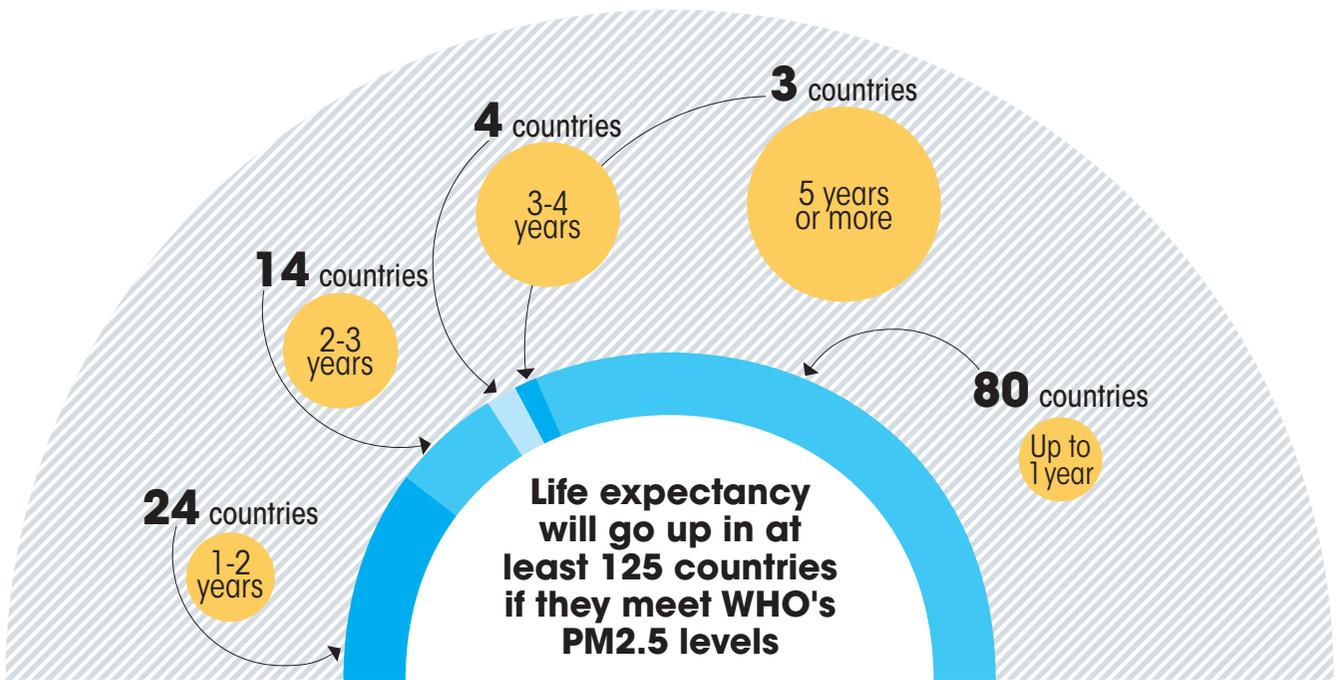

An average Indian will live for 5.9 additional years if the PM 2.5 levels are brought down to 10 $\mu\text{g}/\text{m}^3$

Fossil fuel combustion is the biggest source of air pollution and greenhouse gas emissions in the world

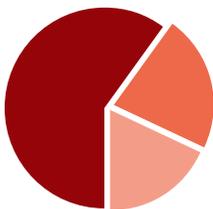

Pollution & life expectancy

In South Asia, home to four of the five most polluted countries in the world, including India, the average person would live 5.6 years longer if pollution (particulate matter of 2.5 microns or PM 2.5) were reduced to meet the World Health Organization's (WHO) guideline of 10 µg/m³. Due to the region's high population and pollution concentrations, it accounts for 58% of total life years lost due to particulate pollution exceeding the WHO levels

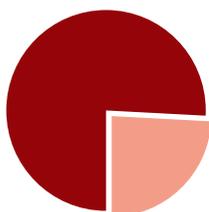

Double assault

Fossil fuel combustion is the primary source of ambient PM_{2.5} and greenhouse gases (GHG)

Sources for global urban ambient PM_{2.5}

Fossil fuel combustion **60%**
 Natural sources **22%**
 Other human activity **18%**

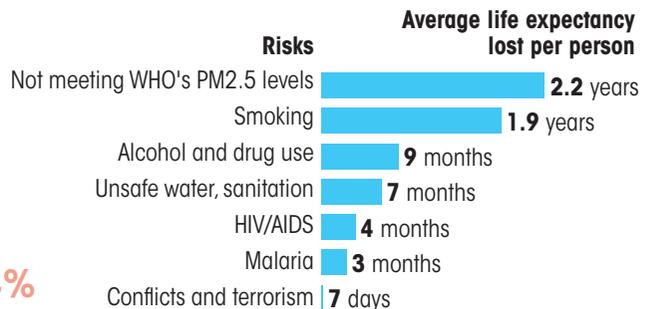

Sources of global GHG emissions

Fossil fuel combustion **76%**
 Agriculture, forestry and land use **24%**

Clear evidence

PM_{2.5} pollution is the world's greatest risk to human health

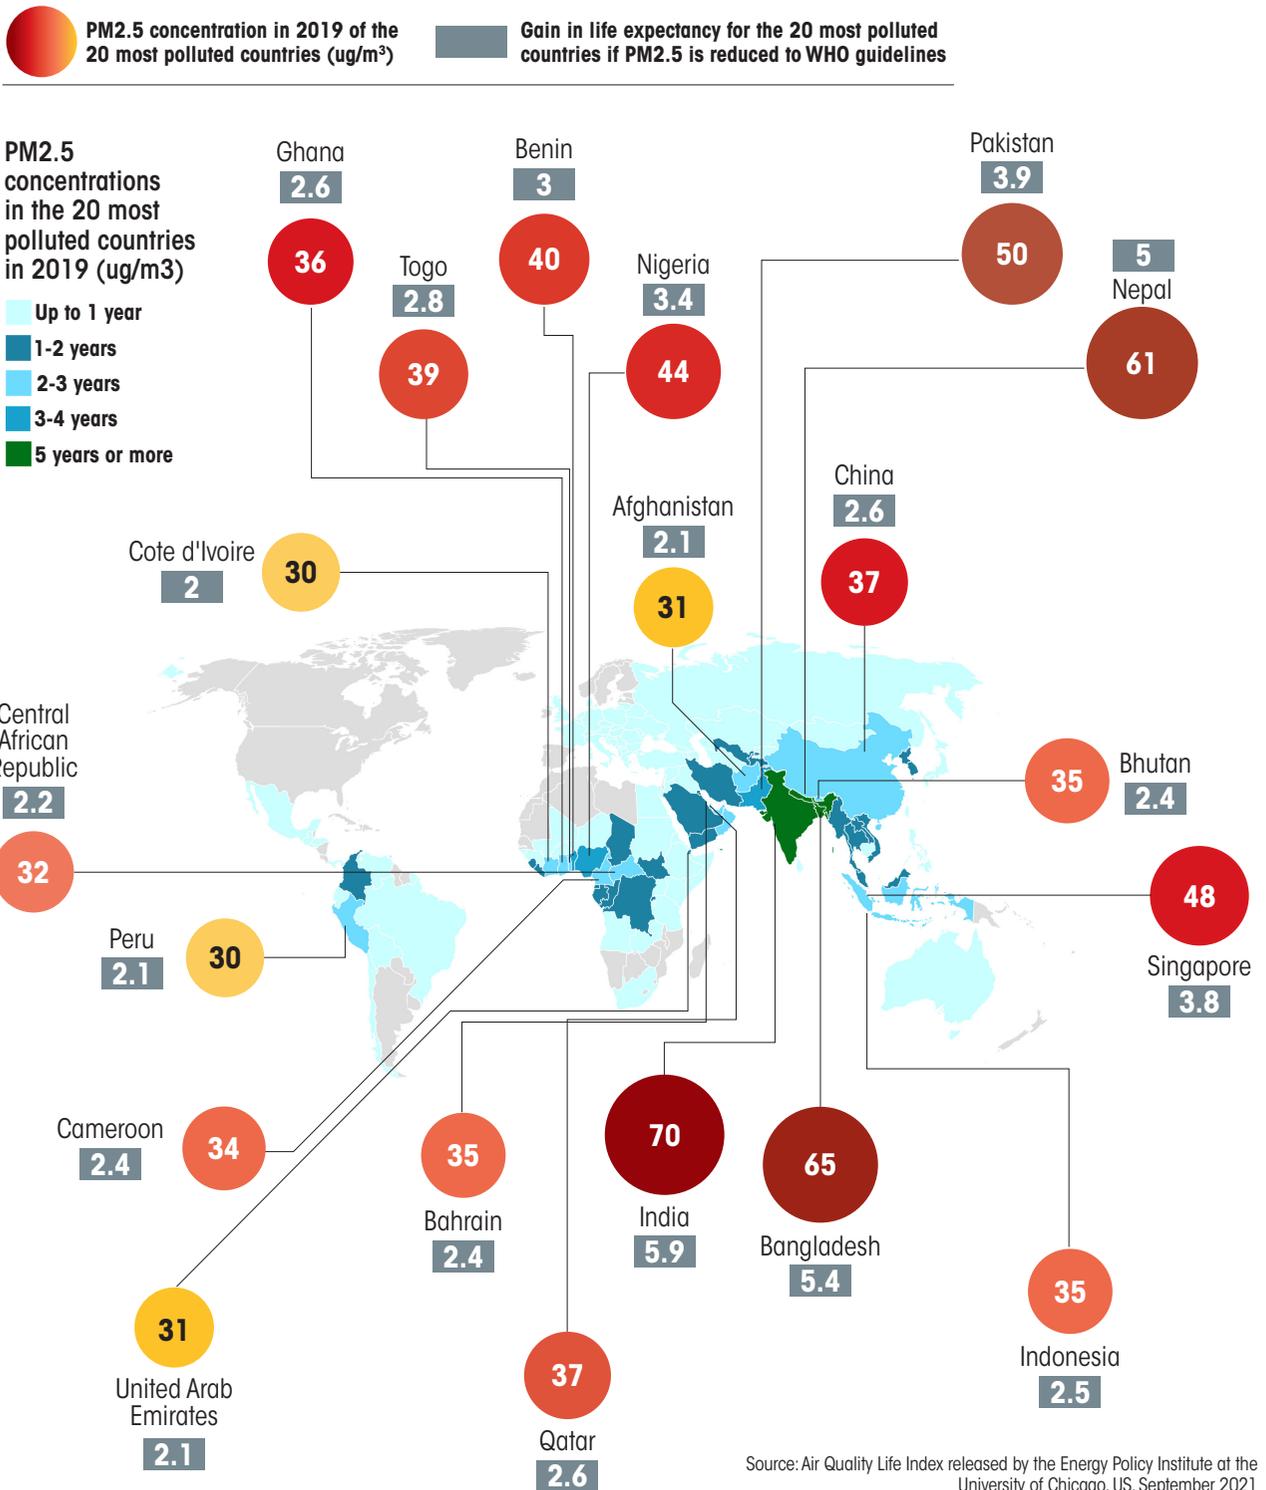

Life expectancy impact of PM_{2.5} and unassociated causes/risks of deaths

Source: Air Quality Life Index released by the Energy Policy Institute at the University of Chicago, US, September 2021

Global health threat

Reducing air pollution to meet the WHO's levels would add 2.2 years to global life expectancy. An average Indian will live for an additional 5.9 years if the country meets the WHO levels of PM2.5

DTE/ CSE data centre was born out of the belief that processing data and information is the new way to communicate today. The centre endeavours to churn out compelling data stories that are credible and easy to comprehend. This is critical as today data is overflowing and information is available from so many sources and so fast that sometimes we end up not making any sense of the happenings.

Down To Earth is one of the most credible instruments of public journalism in India, which has been decoding the politics of development, environment and health for the past 28 years. Numerous readers across the world rely on DTE for a comprehensive view from the South on the most critical issues of human survival.

Centre for Science and Environment is a global think tank from the South for research and advocacy on inclusive green growth
